THE MINDS BEHIND TEKKEN 2™ WOULD LIKE TO SHOW YOU HOW SHARP THEY REALLY ARE.

If you thought Tekken 2™ was tough, take a stab at Soul Blade™ for the Sony PlayStation™. You'll be transported back to the 15th century where you and ten of the world's most awe-inspiring warriors engage in bloody pursuit of SoulEdge - the ultimate weapon. Since only one warrior will find it, the battles are fast, fierce and furious. Intensified by the fact that the warriors can fight with a huge arsenal of intimidating weapons. Not to mention glowing motion blurs, an authentic weapon-to-weapon combat system, polygon characters, real 3D backgrounds and a host of other awesome features. No wonder Soul Blade is a cut above.

Master the Critical Edge for some incredibly devastating combo's.

With a flash of light and a thunderous sound, blades meet with weapon-to-weapon recoil action.

Intense and inspiring opening cinematics feature multiple, real-time endings for every character.

Beautiful polygon characters and 3D arenas produce action so real, you may want to wear armor.

The warriors battle fiercely in radically-styled armor.

SOULBLADE™

introduction

When I first played the original *Tekken* on the PlayStation a couple of years back, it was easily the best beat-'em-up I had ever seen on a console system. To say it was head and shoulders above the competition would have been an understatement. A year or so later, the PlayStation sequel arrived. *Tekken* 2 retained the amazing playability of the original but added more characters and moves, and had much better graphics. It seemed to be the pinnacle of console fighting games.

However, with the release of *Tekken* 3, it has to be said that Namco has taken 3-D beat-'em-up to a completely new level. To call it an amazing game simply doesn't do Namco justice. *Tekken* 3 has everything—arcade-perfect graphics, and music that's actually better than the coin-op's, plus, as unbelievable as it may seem, extra modes of play and game features exclusive to the PlayStation!

Tekken 3: *Prima's Official Strategy Guide* will help you get the most from the best 3-D fighting game seen on any home console. You'll find all the moves, all the combos, all the characters, pro strategy guides, information on the secret characters, plus lots of other essential information to help you enjoy this amazing game to the maximum! There's only one problem with such a perfect game as *Tekken* 3: How will Namco ever be able to outdo themselves?! I can't wait for *Tekken* 4!

Simon Hill

ACKNOWLEDGMENTS

A book of this size is never the work of just one person, so I'd like to say a big "thank you" to the following people for their invaluable help in producing this comprehensive book: First off, thanks to Charlie Chubb for the original design and Paul Middleton for design and layout (all those late nights are appreciated, Paz!). Secondly, thanks to Nick Roberts for sorting out the complete list of moves and spending hours triple-checking the pages, and Warren Lapworth for subbing my text and writing the "Tekken History" section. Also, thanks to Franco Frey for sorting out the thousands of screenshots and all our contacts at Prima in the USA. Cheers to everyone!

Finally, thanks to Mike Fischer and Jennifer Fitzsimmons at Namco for all their help on this project. And thanks to Namco itself for producing the best 3-D fighting game ever!

TEKKEN 3™

HOW TO USE THIS BOOK

In these pages you'll find everything you need to become an expert player of *Tekken* 3. Each character has around eight pages dedicated to them, packed full of information: strategies, strengths, weaknesses, and special moves. Obviously, knowing where to find what you're looking for is essential, so this breakdown puts you in the picture.

GENERAL FIGHTING STRATEGIES

In addition to the basic moves for each character, there are certain general strategies that will help you improve your game. Here we also explain the best use of moves for beginning combo attacks, detailing exactly what distance you should be away from your foe and the optimum time to start your attack.

STATISTICS

NAME
Yoshimitsu
NATIONALITY
Mute (formerly Japanese)
FIGHTING STYLE
Manji ninja arts
AGE
Unknown
HEIGHT
178cm
WEIGHT

BLOOD TYPE
B
OCCUPATION
Leader of Manji clan
HOBBY
Watching sumo matches, wet surfing
LIKES
Arcades
DISLIKES
Villains, foul-mannered game players

Lending a helping hand.... Boskonovitch created the Cold Sleep machine during experiments in his search for eternal life. The technology, still unproven, was used to preserve his young daughter, who suddenly passed away. Yoshimitsu raised research funds, and as the leader of the Manji party, he helped the poor and disadvantaged. Yoshimitsu visited Boskonovitch when he learned of the many martial artist disappearances. The "Yo-man" was surprised to find Boskonovitch suffering from a mysterious pathological organism. It's believed to have been contracted during lab experiments while making the Cold Sleep machine. Like some weird sci-fi story, Boskonovitch claims he needs blood from Ogre to live. Indebted to Boskonovitch for saving his life, Yoshimitsu enters the tournament to help an old friend.

STRONGEST MOVE

Easily the best move in Yoshimitsu's arsenal is his ability to regenerate energy. While in the meditation, Yoshimitsu can build his levels back up in seconds!

GENERAL FIGHTING STRATEGIES

This basic punching combo may be easy to perform, but its speed and power make it a great move to pull out when things are close.

Yoshimitsu has some excellent power moves and can easily juggle an opponent. He's also excellent when it come to short, sharp punching and kicking attacks. If you can master all aspects of his arsenal, you can constantly attack an opponent. Obviously you must give some consideration to what your opponent is doing, but you should be able to use a well planned attack to keep your foe blocking while you come up with the next set of moves in this ever-constant chain.

Despite Yoshimitsu's excellent attacking ability, you can't forget about defending or your opponent could start to dictate the pace of the match. Interrupting an enemy's attacks and chain combos is very important. The easiest and most common technique for doing this is the basic low punch, an easy move that can be followed by a rising front kick. It's possible to use slightly more powerful moves, such as the Knee Bash, to disrupt an assailant's attack, but as you'd expect, your timing must be more precise and you leave yourself open to a counter-attack, should you fail. Start off by breaking their attacks with basic moves, then move on to more complicated ones. For example, if a foe is attacking you, instead of backing off, use Yoshimitsu's low punch to break his or her attack and start a chain of your own.

More Yoshimitsu demonstration: his ability to kill himself, while taking his enemy out at the same time. A risky move indeed!

Yoshimitsu's fake suicide move is one of the most cunning attacks in Tekken 3. If you move in on your foe and perform the move, Yoshimitsu turns and plunges his sword through his stomach and into his opponent. Yoshimitsu loses some energy but because there's no way foes can be expecting this type of unorthodox attack, they won't think to block. Don't overuse this move—as soon as your opponent can anticipate it, the attack becomes useless.

When Yoshi performs his uppercut, he puts his whole body into it and takes a small step forward,

Using the handle of his sword to maximum effect, Yoshimitsu hammers away on his opponent's head.

Yoshimitsu gets caught by Jin for some big time damage.

knocking your opponent into the air so you can juggle him or her. It's easy to perform and can be done in tight situations.

Yoshimitsu has some of the best unblockable attacks, so building them into your general fighting style is essential. The Sword Poke unblockable is good for finishing an opponent—it's extremely fast and can even hit an opponent who ducks or has been knocked to the ground. If your energy is running low, Yoshimitsu has the ability to regain his health. A smart player will always be looking for an opportunity to regenerate health—for example, if you knock your foe to the ground, don't wait for them to get up; back off and regenerate some energy.

STRENGTHS

The characters' advantages over the other fighters are detailed in this section. All characters have their strengths and weaknesses, no matter how tough they seem. Knowing them all by heart is the key to pulverizing other players.

WEAKNESSES

If you learn all the weaknesses of your favorite character, you can make sure you don't expose them to the other fighters when you're playing. A well timed block or counterattack could be all you need to win the battle.

COMPLETE MOVES LIST

Every single move for the character is displayed in this easy-to-follow listing. This is the meat of the guide—official moves direct from Namco. Each special art, throw, and combo is displayed in a table. First you get the name of the move, then the command needed to perform the move, followed by the property showing where the move will hit (H=high, M=middle, L=low); and finally the amount of damage each blow will deliver, plus any comments on the move. In the throws section, you also get the button(s) to press to escape from a throw.

MOVES—STEP-BY-STEP

By reading the complete moves list, you'll know how to perform the various special moves for each character, but you won't know what they look like! This section breaks them down into three stages, so that you can anticipate how your character will act before you perform the move.

COMBO ATTACKS

The list of combination attacks may look a little complicated, but it's really straightforward: The top line is the most important, as it tells you how to perform the combo. Simply follow the sequence of numbers, press the buttons that they refer to, and your character performs the combo. The second line—"Guard Point"—tells you at which places the combo can be blocked. Even if your opponent has started a combo, you can stop the remainder of the attack at these points. The third line indicates the heights that individual moves strike your opponent, and finally there's the damage line, which tells you how much energy each hit drains from your foe.

VS CPU STRATEGIES

To complete the game and see the end sequence for your favorite character, you must defeat all of the main fighters by playing against the CPU. This section gives you specific strategies for battling all the other main characters with your chosen fighter.

GAME FEATURES

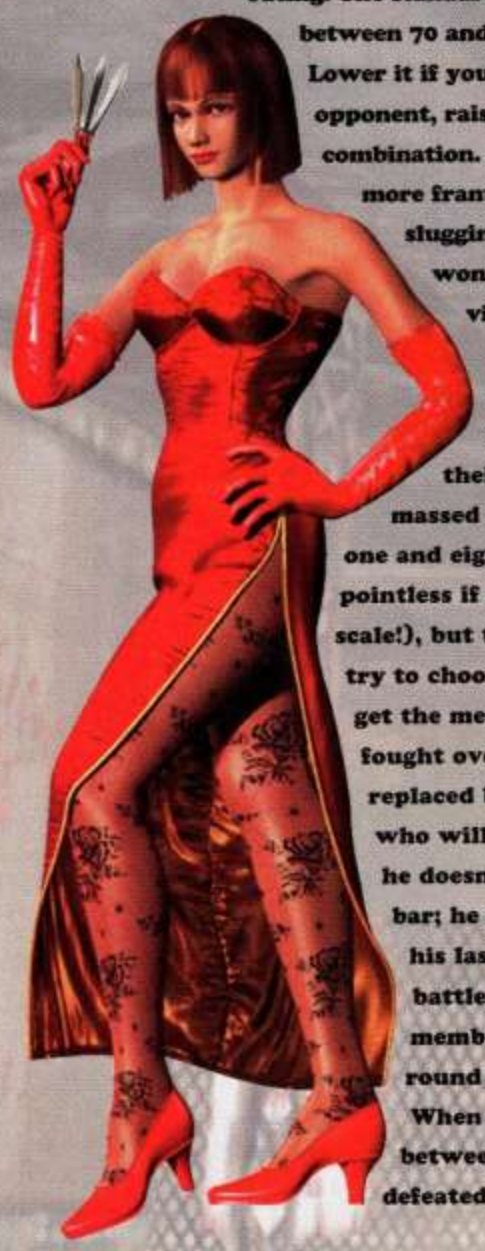
Tekken 3 on PlayStation isn't simply a conversion of the arcade game. As well as the one- and two-player fights offered by the coin-op, there are options to adjust, a practice arena, an FMV movie theater, and *five* new modes of play! Here's a rundown of what PlayStation *Tekken* 3 has to offer.

ARCADE MODE

The traditional "man against machine" game—you versus the CPU. If you go for the full arcade experience (i.e., the "Quick Select" option is switched off), you have 20 seconds to choose one of the 10 characters—more if you have completed the game and revealed others—else you get the fighter that's highlighted by the cursor when time runs out. Then you fight a series of characters for several rounds each (between one and five, depending on the option you have set) until you meet the sub-boss, Heihachi, followed by the boss, Ogre, then again in his real form—True Ogre.

VS MODE

The two-player game is basically Arcade Mode but with a friend as your enemy. After choosing your character, you can adjust your energy rating. The standard is 100, but you can set it between 70 and 140 (in 10-point increments). Lower it if you're a better player than your opponent, raise it if they're superior, or try a combination. Lower both fighters' energy for a more frantic fight, or raise it for a big slugging match. As each Versus match is won, a tally is kept of the players' victories and the draws.



TEAM BATTLE MODE

Here one or two players choose their favorite characters and have a massed battle! You can have between one and eight fighters on your team (pretty pointless if you go for the bottom of the scale!), but they must be different: if you try to choose the same character twice, you get the message "Selected!" Bouts are fought over a single round. The loser is replaced by the next fighter in the team, who will then face the winner. However, he doesn't necessarily have a full energy bar; he just has what is left over from his last bout plus a 15-point bonus. As battles are fought, defeated team members are marked off where the round markers are normally displayed. When the battle is over, colored lines between character portraits show who defeated who.

TIME ATTACK MODE

This is very similar to Arcade mode. A single player works his way through CPU-controlled characters in a series of two-round matches. Aside from the fixed number of rounds, the difference is that you can't pause the game, which is logical since you are supposed to be defeating enemies as quickly as possible.

SURVIVAL MODE

This is another mode designed for lone players. Each bout lasts for a single round. This is a blessing, because when you win, only around 15% of your energy is restored—you don't begin the next fight with a fresh bar. You need to be an experienced, determined fighter to make your way up the survivor ratings. When you're finally defeated, the portraits of your victims are displayed with a number beneath each telling you how many times you defeated them.

TEKKEN BALL MODE

Players choose their character, a type of ball (beachball, gum ball, or iron ball), and then go down to a beachside sports court and knock it between one another. Games last between one and five rounds, just like Arcade and Versus bouts, and you can face a series of CPU characters or play against friends. If you're struck by the ball, you lose energy, particularly if your opponent has charged it up with a special move. You also lose energy if the ball gets past your goal line and touches the ground, but luckily being attacked doesn't damage you. For more details, check out the "Tekken Ball" section near the end of this part of the book.

TEKKEN FORCE MODE

This is a completely new variation on *Tekken* combat—here you fight your way to the right with the character of your choice. The path you walk along has depth, too—you can move "into" and "out of" the screen. There's a time limit for each of the four stages, but each time you eliminate one of the Tekken Force soldiers (who attack from all sides) you gain two or three seconds. To restore energy, collect roast chickens. At the end of each stage, you fight a boss character. This is a normal *Tekken* 3 fight, except for the fact you can move into and out of the screen, and your opponent can move out of view. Read the "Tekken Force" page at the end of this part of the book for more information.

PRACTICE MODE

A single player chooses whose skills he wants to practice, then selects a victim to use as a human punching bag. With no energy bars or rounds, you can fight for as long as you want. A listing of 20 moves are available for display for each character by choosing the relevant option in the menu. This menu is accessed by pressing the START button and also allows you to choose whether your sparring partner simply stands there, attacks you, or can be controlled by a friend. You can adjust counter-hits, replays, swap over the players, choose different characters, and even record your button commands.

THEATER MODE

The *Tekken* 3 Theater Mode opens after you have completed the game with the initial default 10 characters. Make sure you save your game or else it will be lost, along with the sub-boss you will probably have accessed (not all 10 of the main characters have an associated sub-boss). The two FMV Intros (the short arcade one and the lengthy PlayStation one featuring all the main fighters) are

viewable, then as the game is completed with different characters, their movies will be added to the selection list. A snapshot from the highlighted character's movie will be displayed as a reminder of what takes place in the movie. If you complete the game will *all* of the characters, including the hidden characters, you will access the Tekken Sound Mode, where you can play any piece of music uninterrupted by sound effects and fight victories. You can also swap disks with the original *Tekken* and *Tekken* at this point to watch the movies and listen to the music by selecting the "DISC" menu item.

OPTIONS MODE

This mode itself offers a menu: Game Options, Key Configuration, Records, Display Adjust, and Memory Card. As you would expect from a Namco game, there are plenty of things to tinker with....

Game Options

Naturally, this is where most adjustments can be made: Difficulty Level (Easy, Medium, or Hard), Fight Count (between one and five rounds), Round Time (between 20 and 60 seconds, in 10-second intervals, or infinite time), Change Character At Continue, Guard Damage, Select Cursor Hold, Quick Select, BGM Select (arcade, arrange, or silent), and Speaker Out (mono or stereo).

The first three are most important, but Difficulty Level is irrelevant if playing against a friend, and in some modes the Fight Count and Round Time are unaffected. Luckily, a box in the corner of the screen tells you which modes are affected by the highlighted option. Other notable variables are Guard Damage—even if you block attacks, your character still receives some damage—and Quick Select, a character selection screen different to the standard arcade one, where you don't have to choose your fighter within a time limit.

Key Configuration

It's best to leave the four PlayStation symbol buttons as the two punches and two kicks, but what you assign to the shoulder buttons is a matter of taste. For example, having a left shoulder as sidestep into the screen and the equivalent right shoulder to sidestep out of it (vice versa for player two) is useful.

Records

Choose this and the characters are ranked according to Time Attack times, number of victories in Survival Mode, how often they've been played, and their ratio of wins to losses. Press left or right to switch between these top 10 tables.

Display Adjust

Here you shift the game image in the four main directions so that it's centered on your monitor or TV. It's a good idea to have everything set for optimum performance before beginning a determined shot at taking down Ogre, God of Fighting!

Memory Card

You don't want to lose a new Survival or Time Attack record, and you *definitely* want to keep every new character you access, so remember to save your game to a memory card. Alternatively, activate the auto save option so that information is backed up as soon as there's a significant change.

BASIC SKILLS

*All of the conventions used assume that the character is facing right.

KEY TO MOVES

LP . . . .Left punch
RP . . . .Right punch
LK . . . .Left kick
RK . . .Right kick

⇨ . . . . .Tap forward (toward opponent)
→ . . . .Hold forward
⇦ . . . . .Tap back (away from opponent)
← . . . .Hold back
⇧ . . . . .Tap up
↑ . . . . .Hold up
⇩ . . . . .Tap down
↓ . . . . .Hold down

⇘ . . . . .Tap down+forward
↘ . . . . .Hold down+forward
⇙ . . . . .Tap down+back
↙ . . . . .Hold down+back
⇗ . . . . .Tap up+forward
↗ . . . . .Hold up+forward
⇖ . . . . .Tap up+back
↖ . . . . .Hold up+back

⇩, ⇘, ⇨ . . . . . .Quarter circle forward
⇩, ⇙, ⇦ . . . . . .Quarter circle backward
⇦, ⇙, ⇩, ⇘, ⇨ . . . . .Half circle forward
⇨, ⇘, ⇩, ⇙, ⇦ . . . . .Half circle backward

N . . . . .neutral (no direction pressed on the joypad)
FC . . . .Full crouch (must be in full crouching animation)
WS . . .While standing from a crouch
SS . . . .Sidestep
+ . . . . .Do moves on either side of + together
~ . . . . .Immediately followed by...
[_] . . .Choice of which way to continue the move
> . . . . .Next part of sequence
, ...N/A
BK . . . .Back toward opponent
ANY . .Any button
ALL . . .LP+RP+LK+RK
* . . . . .Guard point in combo; hit can be blocked if previous hit connected
( ) . . . .→ on joypad results in damage contained in parentheses
(*) . . .Damage next to * signifies "on clean hit" (deep hit)
< . . . . .Moves on either side of < can be slightly delayed

Comments

BK . . . .Move recovers with back toward opponent
JG . . . .This move, or one of the moves in the combo, juggles opponent
RC . . . .Recovers crouching (you may go into any WS after indicated move)
BN . . . .This move bounce juggles your opponent off the ground
OB . . . .If unguarded against, this move forces opponent's back toward you
OS . . . .If unguarded against, this move forces opponent's side toward you
DY . . . .This move damages your character
DS . . . .Double Over Stun (opponent clutches stomach and falls over)
KS . . . .Drop Knee Stun (if opponent is hit with move, they drop to one knee)
(if opponent is counter-hit with move, they fall into SLD)
(move creates guard stun (GS) if guarded correctly)
GS . . . .Guard Stun (opponent's guard is broken for a short time)
CS . . . .Crumple Stun (opponent crumples over when hit)
SG . . . .Stagger (opponent is staggers backward)
TS . . . .Turn Stun (turns opponent sideways if guarded correctly)
CH . . . .Move must be a counter-hit

Gameplay Basics

. . . . . "See note # below"
c . . . . . Modifies a comment. Means "on counter-hit" (e.g., JGc = "juggles on counter-hit")

Position
PLD . . .Play Dead (on ground, face up, feet away from opponent)
SLD . . .Slide (on ground, face down, feet away from opponent)
FCD . . .Face Down (on ground, face down, feet toward opponent)
KND . .Knockdown (on ground, face up, feet toward opponent)

Levels
l . . . . .Move hits low height (↙ to block)
m . . . .Move hits mid height (← to block)
h . . . . .Move hits high height (← to block/↙ crouch under)
L . . . . .Move hits low height and downed opponents (↙ to block)
M . . . . .Move hits mid range and downed opponents (← to block)
H. . . . . Move hits high range and downed opponents (← to block/↙ crouch under)
Sm . . . Move hits special mid range (← or ↙ to block)
!. . . . . Move is unblockable
(!) . . . .Move is unblockable and hits downed opponents

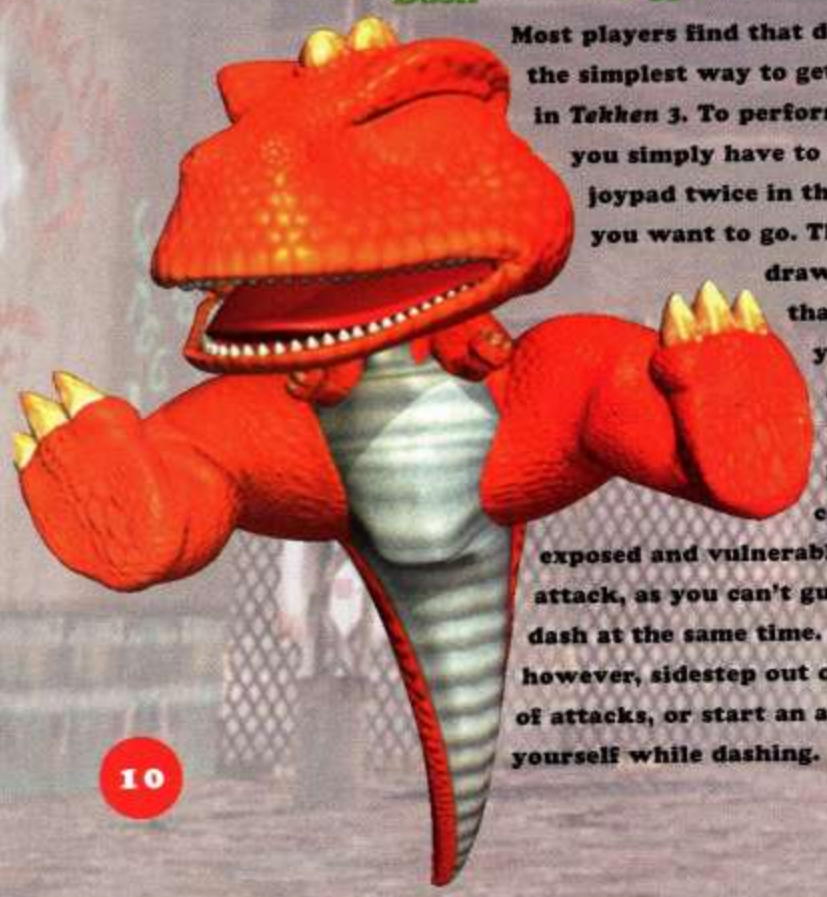
Throws
f-throw . . . . .Facing opponent
b-throw . . . . .Facing opponent's back
rs-throw . . . .Throw from opponent's right side
ls-throw . . . .Throw from opponent's left side
ob-throw . . . .Your back is facing opponent
c-throw . . . . .Throws opponent in the crouch position
g-throw . . . . .Opponent is knocked down on ground

Walk → or ← or ↘ or ↙

Before you can start showing off with elaborate moves and combos, it's good to have a thorough knowledge of the basics. One of the most basic movements in *Tekken* 3 is walking. It's also the least effective way of moving your character around the battle area. You should only use walking to move small distances—when performing combos, for example. If you press forward or backward and down at the same time, your character crouch-walks along the screen, which can be very useful for getting close to an opponent when you think they're going to attempt a standing throw or high attack.

Dash ⇨⇨ or ⇦⇦

Most players find that dashing is the simplest way to get around in *Tekken* 3. To perform a dash, you simply have to tap the joypad twice in the direction you want to go. The main drawback is that while your character is dashing, he or she is completely exposed and vulnerable to attack, as you can't guard and dash at the same time. You can, however, sidestep out of the way of attacks, or start an attack yourself while dashing.



Running ⇨→

To cover long distances across the battle area, you can run. By tapping forward and then holding it down, your characters run until they hit something. You can use a run to start two other moves:
a slide is achieved by pressing the right kick button while running. This hits an opponent low and is particularly useful for attacking an already downed opponent. Then there's the Flying Cross Chop, which is performed by running and pressing left punch and right punch. This hits at middle height and creates a guard stun.

Sidestep ⇧ or ⇩

All-new for *Tekken* 3 is the sidestep—some characters had this ability in *Tekken* 2, but it wasn't universal. To sidestep, simply tap once in the direction you want to go. This move is useful for confusing an opponent, and getting around to his or her side to perform a side throw. Each character travels a different distance when sidestepping, so you have to know how far your favorites will go before fully utilizing this move. You can break into any attack while sidestepping, or move backward and forward to position your character accurately. Sidestepping while your characters have their back turned will turn them around the correct way again, with Ling Xiaoyu being the only exception.

Jumping ↖ or SS or ↗ or ↖ or ↑ or ↗

Two kinds of jump are available to all characters: simply tap in the direction you want to jump for a hop, or hold down in the direction for a leap. The difference is the distance your character jumps. A hop is best used to avoid a low attack or jump a downed opponent, the leap is for starting an aerial assault on your opponent—press the left kick button on your descent and you perform a jump stun.

Guard ← or N or ↙ or ↓

Without learning the skill of guarding—also called blocking—your character is always vulnerable to attack. Unlike other fighting games, *Tekken* 3 characters actually guard/block at high and mid-levels when the joypad is in the neutral position—in other words, when you're not moving in any direction. This can be very useful, but should not be relied upon to protect your character as it can be broken by combo attacks. Active guarding is when you press backward, down, or back/down diagonally to force your character into a blocking stance. This is the method that's recommended, and should become second nature to all *Tekken* 3 players.

Guard Damage

You can alter the damage done when an opponent is guarding in the Options menu of *Tekken* 3. The standard setting for guard damage is off, so if an opponent blocks your attack, he or she won't be harmed in any way. With the guard damage switched on, you're in for a more frenetic game!

Damage

All the damage inflicted in *Tekken* 3 is measured in points. On each of the special moves you will find a points rating—this is the amount of damage your characters will inflict on their opponents with a clean hit. The only exception to the damage rule is when a special move strikes

on a counter-hit—this normally creates more damage. The basic setting for energy points is 100, but in Vs Mode both players can change this to start with between 70 and 140 points, in 10-point increments, to help or handicap themselves, or create a shorter, tougher game or longer, easier one.

ATTACK RANGES

Each move or throw can strike at a variety of levels. High (H), Mid (M), and Low (L) are the three basic ones and refer to the area on an opponent's body where your character makes contact. Then there's Special Mid (Sm), which needs to be blocked in a certain way to survive unscathed.

THROWS

In addition to an array of punches and kicks, every character has a handful of throws; fighters such as King have linkable throws. The disadvantage of throwing moves is that you have to be close enough to your opponent to grab them, leaving yourself open to their punches and kicks, but this is compensated for by the substantial amount of damage they inflict. Button for button, throws are more powerful than combos.

Basic Throw LP+LK or RP+RK

Every character has two basic throws. Press left punch and left kick together (LP+LK), or right punch and right kick together (RP+RK). If you're too far from your opponent or they block the throw, you're fighter grasps at the air ineffectually. Although the buttons for basic throws are the same for all characters, the moves they perform and the damage they inflict varies depending upon who you're controlling—in fact "throw" is a strange term for some of the maneuvers that are performed!

Back Throw LP+LK or RP+RK (from behind)

This is initiated in the same way as a basic throw—left punch and left kick, or right punch and right kick—but first you must get behind your opponent. The move that's performed depends upon the character you chose, and likewise the damage inflicted varies, although it's likely to be higher than other throws, since your victim was attacked from a vulnerable position—they cannot escape from a back throw, either.

Side Throws LP+LK or RP+RK (from side)

Once again, left punch and left kick, or right punch and right kick are the buttons to use, but as you'd expect, this time when you're at your opponent's side. The most obvious time to use these elaborate-looking moves is immediately after a sidestep. Like back throws, side throws cause more damage than basic ones.

Special Throws

These are the characters' personal throws. Like other special moves, they have different joypad/button sequences, some of them long and complicated, but the reward is usually greater damage than basic throws. Some fighters have a modest selection of special throws, others a huge list—King's throwing moves boggle the mind!

ATTACK REVERSALS

These can be incredibly useful. If you're being attacked and perform an appropriate attack reversal, you grab the enemy's attacking limb and inflict damage on them instead (the amount depends upon the move you reversed). Not all characters have a reversal attack, and some only have one that affects certain attacks, such as right kicks, which severely limits their use. The button combination for reversal attacks depends upon the fighter used; all should be learnt.

Double Reversals →+LP+LK or →+RP+RK

An attack reversal itself can be reversed. If you're facing a player who's fond of attack reversals or a skilled CPU opponent, you should have your double reversal or "chicken" move at the ready. Bear in mind the left or right dominance of your attack. If you're using a left punch (LP) or left kick (LK), you need the forward and left punch and left kick double reversal; most maneuvers that strike with a left limb need this reversal. Likewise, if you're attacking with a right limb, you need the forward and right punch (RP) and right kick (RK) double reversal. If you see your attack being reversed, it's very difficult to use a double reversal quickly enough, so you should use them anyway, as a matter of course—a right double reversal after you attack with a right limb, and the left version after a left-dominated maneuver. Of course, some characters have no attack reversal, so double reversals aren't necessary, and others have ones that only affect certain types of attack, so you only need to use a double reversal in those areas. These vulnerabilities are mentioned in the characters' "Weaknesses" sections. Law and King are the opposite—their attack reversals cannot be reversed.

Super Charge LP+RP+LK+RK

New to the *Tekken* series, the Supercharger is an ability common to all characters. To begin charging, press all four attacks buttons (left punch, left kick, right punch, right kick) at the same time. While charging and even when charged, you can't guard. Any hit you receive is treated like a counter-hit, and similarly, when you're Supercharged, your first attack acts like a counter-hit; if your opponent blocks it, they still suffer guard damage, regardless of how this option is set. In all cases, you lose the Supercharge when you deliver or receive a blow. You keep it if thrown, but if not lost any other way, the Supercharge disperses after three seconds.

GETTING UP

Getting to your feet after being knocked or thrown to the ground isn't as straightforward as you may imagine. While on the floor, you're vulnerable to pounce attacks and low kicks, but if you get up the wrong way, you can be knocked right back down. There are few different ways to rise:

Rise or Roll ⇧ or ⇦ or ⇨ or ⇩+LP then ⇧, ⇦ or ⇨

The simplest way to get to your feet is to press up on the joypad—your character stands up.

To roll left or right then get to your feet, press back or forward. A variation on these involves holding down and pressing left punch (LP) to roll onto your stomach, then press up to rise, or press back or forward to roll then stand up. These offer different paths and times to get from the prone position to the usual standing, automatic mid/high blocking pose.

Attack LK or RK

Lying on the ground, you're not as defenseless as you may imagine. Press left kick (LK) and you spring to you feet and aim a kick at low level, or use right kick (RK) to quickly get up and deliver a blow at your enemy's mid-section.

Roll then Attack ⇦ or ⇨ then LK or RK

You can roll in either direction, as before, then go straight into a kick rather than merely standing up. After pressing back or forward, quickly press left kick to perform a low kick, or right kick for a mid-level kick. Using this sequence you can avoid an enemy's pouncing attack and hit them before they can guard against attack.

COSTUME CHANGES

Every character in *Tekken* 3 has at least two costumes to choose from. Select the one you prefer by pressing the corresponding button on the selection screen. Here's a complete breakdown....

Jin Kazama

LP or RP: No shirt, black pants with flame motif
LK or RK: Black and orange shirt, black pants with red logo
Earned: School uniform, blue sweater, pinstriped pants

Paul Phoenix

LP or RP: Red Karate Gi
LK or RK: Black motorcycle riding outfit

Forest Law

LP or RP: White shirt, blue pants
LK or RK: White tank top, maroon pants
Start: Yellow jumpsuit

Lei Wulong

LP or RP: Green kung fu shirt, red pants
LK or RK: White button-up shirt, brown pants

King

LP or RP: Blue pants, yellow knee and elbow padding
LK or RK: Blue shirt, gray sweatpants

Nina Williams

LP or RP: Purple bodysuit
LK or RK Black hot pants, dark maroon top

Yoshimitsu

LP or RP: Black pants, metal shin guards, silver body armor
LK or RK Full silver body armor

Ling Xiaoyu

LP or RP: Orange warm-up suit, yellow sash
LK or RK: Blue top, tight black shorts
Earned: School uniform, white-and-blue top, pinstriped dress

Hwoarang

LP or RP: White Karate Gi
LK or RK: Jeans, black chaps, blue tank top

Eddy Gordo

LP or RP: Matching green-and-yellow pants
LK or RK: Black shorts, red-and-purple tank top
Earned: Eddy becomes Tiger Jackson

Kuma

LP or RP: Brown bear Kuma with red handkerchief around neck
LK or RK: Panda

Julia Chan

LP or RP: Jean skirt, tan leather top, leather boots
LK or RK: Bell-bottom jeans, brown shirt

Gun Jack

LP or RP: Dark gray body armor
Earned: Dark green body armor

Mokujin

LP or RP: Male Mokujin
LK or RK: Female Mokujin

Bryan Fury

LP or RP: Leather vest with black-and-white pants
LK or RK: Tan snakeskin pants

Heihachi Mishima

LP or RP: Dark blue Samurai pants
LK or RK: Purple jacket, white pants

Ogre

LP or RP: Green Ogre
LK or RK: Pink Ogre

True Ogre

LP or RP: Brown True Ogre
LK or RK: Green True Ogre

Hidden Characters

When the Arcade Mode is cleared with any of the 10 selectable characters, a hidden character is uncovered. Playing in succession with other selectable characters will release additional hidden characters. The release order is as follows:

- **Character 1: Kuma and Panda (Panda is the alternate "costume" for Kuma.)**
- **Character 2: Julia**
- **Character 3: Gun Jack**
- **Character 4: Mokujin**
- **Character 5: Anna**
- **Character 6: Bryan**
- **Character 7: Heihachi**
- **Character 8: Ogre**
- **Character 9: True Ogre**

TEKKEN BALL

In Tekken Ball, the simple, relaxing pastime of playing with a beachball has become an explosive contact sport! This is a mean beach—if you're not good enough with the ball, you're KO'ed!

You play against a series of CPU-controlled fighters, just like Arcade Mode, or a friend (but unlike Versus Mode, you can't alter your energy points). After selecting characters, choose the type of ball you want—if you're having a two-player match, player one makes the choice.

There are three balls, each with a different maximum damage rating: The beachball has a "Beginner" rating and 60% damage; choose the "Expert" gum ball and it's 80%; or if you think you're a "Grand Master," use the iron ball—it can inflict up to 100% damage!

The Match

Just like ordinary fights, Tekken Ball matches have between one and five rounds, but they're set at infinite time, so there's no pressure to hurry. When the first round begins, the ball is next to player one's character; thereafter, the side its starts on depends on who lost the previous round.

The court has a white center line that the players can't go beyond and thinner goal lines on either side. The basic aim is simply to get the ball past your opponent's goal line, but bear in mind that they can save it—the ball has to settle on the ground before you get a "goal" and sap a massive 20% of their energy.

The other way to injure your opponent is to charge up the ball with a special move; if they're struck by a charged ball, damage is inflicted according to the number displayed near the ball. Gauges at the bottoms of the screen indicate how much each player has powered-up the ball.

Ironically, you can't injure your opponent by fighting them—direct attacks inflict no damage.

Playing Tips

- **Getting to the ball quickly is vital, so slow, bulky characters like King and Gun Jack make poor players. Choose a fast, nimble character like Nina, Ling, Hwoarang, Law, or Lei.**
- **Although they have different damage ratings, the three types of ball act similarly, so you can practice with the beachball then switch to either of the other balls when you feel you're ready.**
- **When the ball starts a round on your side of the court, run through it to knock it way over your opponent's head and far past their goal line for easy damage. You can try a similar thing when the ball's low over your side of the center line, but if it's beyond your goal line, be careful you don't leave it too late and let the ball hit the floor.**
- **Although the you can't directly hurt an opponent, you can knock them to the ground, giving yourself an easier opportunity to land the ball past their goal line. Don't use a powerful punch that also knocks them across the court, however, because that puts them in a good position to reach the ball.**
- **You don't have to strike the ball with a limb. Provided it's not charged, you can leap up and hit it with your head—a forward jump often gets the ball past your opponent—and if it comes to rest between the center line and your goal, merely walking into the ball gets it off the ground, even when it's behind you.**

TEKKEN FORCE

Heihachi Mishima formed Tekken Force to resolve small conflicts all over the world—and unearth mighty creatures such as the God of Fighting, apparently!—but his intentions are not honorable. It's your job to bring Heihachi's army to justice.

Your chosen fighter is scaled down from the *Tekken* one-on-one fights and put on a scrolling path. You walk to the right and can sidestep "into" and "out of" the screen, rather than just around your opponent, to take advantage of the path's width.

As Tekken Force soldiers approach from all directions, use punches and kicks to eliminate them. There's no need for special moves or combos, since they only have small energy bars—the Crow soldier has around 15 points, Falcon has about 30. Taking them out not only ensures your safety, it also extends the game's time limit; you gain two seconds for Crow, and three when you KO a Falcon soldier. As you progress through Tekken Force's four stages, you meet tougher soldiers such as Hawk and Owl. They often have bigger energy bars—up to 75 points—but times of four and five seconds are awarded when you defeat them.

There's a boss-style character at the end of each stage. These are standard *Tekken* 3 characters, but the depth of the path makes the fights more complicated. In the first two stages, you're more likely to be hurt by a single boss than several soldiers. The quicker, you beat each boss, the better—they have an associated bonus time that ticks away above their head. The time remaining when you beat them helps boost the next stage's initial time limit.

When your life is in danger, collect the roast chickens that are scattered through the stages. Simply walk through them to restore large amounts of energy.

Playing Tips

- **Choose a character with powerful, versatile kicking attacks—Nina, Hwoarang, or Law, for example—as these can dispatch the Crow soldiers with a single blow, and at a safe distance; Falcons are stopped with two quick hits. Heihachi's men are easily felled by Eddy Gordo's low, swinging kicks, too—and the way he dances along the street is totally cool!**

- **Practice moving "into" and "out of" the screen by replaying the first stage. When you're used to the basically 3-D gameplay of *Tekken* 3, it's not easy to do well. You need to be agile to quickly confront soldiers, before they can gang up on you, and efficiently take out the bosses.**

- **If you need energy, line yourself up with chickens well before you reach them. If you overshoot so they—or any other point on the stage—is at the far left of the screen, you can't retrace your steps.**
- **Enemies often walk off the edge of the screen. In the case of soldiers, you can stand at the point that they went out of view and keep kicking—they'll blunder onto your attacks. When you're fighting a boss, stay near the center of the screen so you can see them coming and avoid their dangerous attacks.**

From riches to rags.... Eddy was born into one of the richest families in Brazil. Ever since he was a small boy, he knew he would one day take over the family business. He was well liked in his home town because he was a hard worker who treated others as equals. One day, when he was 19, Eddy came home from school to find his father shot and dying. He recalled that his father had been unusually nervous and fearful in recent weeks. Eddy's father was working to destroy the drug cartel in Brazil. His untimely death occurred just when he had obtained enough evidence to put the kingpins away for good. In his last breath, Eddy's father told him, "Now is not the right time to fight. Falsely admit to the crime and hide in prison. Only there will you be safe." Eddy went along with his father's last wish and the model student went from a life of luxury to incarceration as a murderer. Prison life was hell and not a day went by that Eddy didn't vow to get even with his father's killers. One day during a prison riot, he watched an old man with great power fight using a technique he called Capoeira. For eight years, Eddy practiced until he became a master and could be considered a lethal weapon. Upon his release from prison, Eddy heard about the "King of Iron Fist Tournament" and the Mishima Financial Empire. He decided to enter the tournament, believing he could persuade the MFE to help him seek his long-awaited revenge.

HOW TO FIND TIGER JACKSON

You must beat the game with 17 characters (Eddy Gordo must be one of them) to access Tiger Jackson.

STRONGEST MOVE

Here Eddy uses his strongest move, the Fruit Picker, to devastate a helpless Nina. This move is completely unblockable and quickly inflicts major damage.

GENERAL FIGHTING STRATEGIES

When playing as Eddy, your ability to dodge your opponents' attacks is very important, as it can lead to countless counterattacking opportunities. Eddy is arguably the hardest character to predict, and if you constantly move and dodge around, you make things even worse for your opponent. You can use the basic sidestep technique that all characters have, or Eddy's Rewinder move.

Low attacks and sweeping moves form the basis of Eddy Gordo's fighting style.

The Rewinder is easily the quickest and most effective way for Eddy to sidestep an attack. Get used to it and it gives you many counterattacking chances. It's easily performed by pressing RP+LP and can be followed by moves like the Slipper kick combo or, better still, the One-Two Elbows combo. If you want to juggle your opponent, use the Freak Show, as this knocks them high into the air for easy juggling combos.

Eddy's using one of his sweeping attacks to take out his opponent in style. These moves are extremely difficult to block.

The Satellite Moon move initiates most of Eddy's 10-string attacks. This basic move is really easy to perform—tap RK, LK in quick succession—scores 25% damage, and as we've said, leads to many chain attacks. Beware of using the Satellite Moon as a standalone move—if you don't follow up with another attack, Eddy needs time to recover, giving your opponent a golden counterattack opportunity.

Make full use of the extremely fast recovery time Eddy has on most of his moves. This allows you to attack and not worry (too much!) about your opponent counterattacking. Always remember that Eddy is most vulnerable when standing still—keep moving and attacking if you want to win!

His foe has been knocked to the floor and Eddy has finished the combo with his back to them. Time for a pounce attack!

Because Eddy has so many moves that look similar, blocking them consistently is almost impossible. Be aware of the move you're doing and which you'll use next; that way you can keep the initiative by taking advantage of Eddy's unpredictable nature.

Eddy Gordo

STRENGTHS

● Eddy can put his enemy under constant pressure from the moment the match starts. Basically, you should never let your opponent catch his breath—once you get them reeling backward, don't let up, keep the chain going. Even if some moves are only basic punches or leg sweeps, constantly attack. Most players become so frustrated by Eddy's chain attacks that they can't fully concentrate on what they're doing, and because a high proportion of his moves hit at a low/mid level, blocking is difficult. Most players keep a mid/high blocking stance for most of a match, so a quick sweeping attack often floors them.

● If you know how to use him properly, Eddy is one of the hardest characters to block consistently. It's a common belief that his attacking options can be brought to a halt by simply blocking low. This is true up to a point, but not a hard and fast rule. Most of Eddy's players would have to admit that he doesn't have many high moves—a good thing, in some ways, as this attack height is the easiest to block or reverse—but he does have an excellent variety of low- and mid-level kicks that prove very difficult to block. Also, due to the extreme weirdness of his kicking attacks, most of them can't be easily reversed.

● Eddy's Handstand position is one of the most unorthodox stances in *Tekken* 3, and while you may think it's just designed for entertainment value, it forms the basis of numerous attacking moves and combos. The Handstand can be a real strength, as it's difficult for an opponent to predict what Eddy will do next. When you begin playing as Eddy, stay in the Handstand position as frequently as possible and practice dodging from this stance when in a tricky situation. If you can do this, the Handstand can be a killer!

WEAKNESSES

● Eddy's Satellite Moon kick combo is certainly one of the most potent in his arsenal, but only completing half of it is dangerous and can put Eddy in big trouble. The main reason is that there's a long pause after the first kick—if you don't immediately follow it up, you're asking for your opponent to counterattack. If you want to use the Satellite Moon kick combo, always have the follow up ready, that way you'll get the full effect of the combo without putting your life in danger.

● A big, awkward weakness is that in order to use many of his better sweeping combo attacks, you must put yourself in a dangerous ground position, like the Handstand or Relaxed stance. Until you begin to use the intended combo, Eddy is extremely vulnerable, and a quick-thinking opponent can easily take advantage and cause massive damage. You shouldn't get into these positions unless you know exactly what you're going to do—don't just go into a Handstand then think about your next move, you must first know what that move will be! This is particularly true against characters like Nina, Paul, and King, as they have moves that can destroy you while in this stance.

● Because of his weird attacks and the way you perform them, you should never hold Back on the control pad while attacking someone. If you do, you're likely to go into an unwanted Handstand, which can be disastrous. Unless it's part of a move you want to use, never press Back on the pad when you're on the offensive.

● Eddy's biggest weaknesses are his slow moves. While his kicks inflict a good deal of damage, they don't have the speed to beat his opponents' punches—unlike the extremely fast-kicking Hwoarang. You need to work on your timing and button skills, not rely on button-mashing and luck.

EDDY GORDO VS CPU STRATEGIES

VS EDDY GORDO

Counterattack and mirror your opponent as best as you can—if the CPU Eddy performs a Freak Show, block then retaliate with a Freak Show of your own. The computer has problems blocking series' of looping combo attacks, but don't overuse them or it will learn to counterattack.

VS YOSHIMITSU

Yoshimitsu should be a piece of cake. All you need do is overwhelm him with lots of spinning sweep attacks. Because Yoshimitsu likes to attack high (one of his favorite moves is the triple spinning kick), using Eddy's low attacks avoids your enemy's moves while counterattacking with your own.

VS HWOARANG

This match is a complete nightmare for poor Eddy! The fast-kicking Hwoarang can attack Eddy while he uses his low sweeping attacks— the Handstand position, in particular, is almost useless against Hwoarang. The best thing to do is to keep your distance then counter his assault with chain attacks.

VS NINA WILLIAMS

Nina's excellent speed, attack power, and counterattack abilities cause problems for Eddy. The key is to try and stay as low as possible when fighting her, because all of her 10-strings start high. If you do this, you take away Nina's greatest asset and give yourself a chance to confuse her with sweeping attacks.

VS FOREST LAW

Eddy's ability to mix his low attacks to create confusing sequences proves highly effective against Forest Law, as he tends to use high attacks like the Rainbow Kick to knock you to the ground. Don't let Forest use his speed advantage to force you into an attack—stay back and pick your moments carefully.

VS JIN KAZAMA

You must have sound blocking skills, as Jin's high/low level attack combos cause major problems. Blocking well also gives you the chance to counter with sweeping attacks of your own. Steer clear of high attacks in this match, or Jin's reversal attack will get you! Do what Eddy does best: sweep attack your foe for all you're worth!

VS LING XIAOYU

When Ling enters her Art of Phoenix stance, use a quick Front Stinger attack, then drop into the ground position and follow this up with a Helicopter move. When Ling uses her basic fighting stance, simply let her attack then counter with low sweeping combo moves—even Ling's great speed won't be enough to save her!

VS KING

The Handstand position is the most important part of Eddy's game here. Use this stance whenever you advance, as it confuses your foe and gives you lots of attacking variation. Always be aware of King's ability to attack at a low level—use Eddy's Rewinder move to avoid his attacks and start your own attack.

VS LEI WULONG

Lei tends to use his Play Dead technique, and this is just playing into Eddy's hands—simply perform a sweeping combo to inflict big damage. The main rule in this match is to keep on the offensive: don't let Lei have time to use his animal stances and other techniques and you'll be in for an easy time.

VS GUN JACK

The most important thing is to stay well out of Gun Jack's throwing range—fail to do so and the fight will soon be over. Because of Jack's minimal speed and Eddy's ability to string together low level, sweeping attacks, this match should be relatively simple. Don't get too close, and punish Jack whenever you get the chance.

VS BRYAN FURY

The trick is to mix the style and level of attack every time—Bryan quickly works out what you're doing if you always rely on low attacks. Eddy only has a handful of high level attacks, but mixing them into your fighting style increases the chance of his powerful low level attacks hitting home.

VS KUMA

If you can't win this match with Eddy, you should choose another character. Eddy's fast and low attacking style should have Kuma on the ground in no time, then simply take advantage by using a pounce attack or, better still, another sweeping combo. Easy.

VS HEIHACHI MISHIMA

The key in this match is to mix your fighting tactics—similar to Bryan Fury, if you use just one style of attack, Heihachi begins to punish you with powerful counterstrikes. Once again, use the occasional high- or medium-level attack to keep him on the defensive, then use powerful sweeping attacks to finish him in style.

VS JULIA CHANG

You must take control of the fight from the start and keep her under pressure, as this will prevent Julia from starting any of her deadly combo attacks. Remember that Eddy has an extremely short recovery time after his attacks, so it's easy to chain them together. Keep going forward and you'll have the match won in no time!

VS MOKUJIN

There are no specific Mokujin fighting strategies, because he uses the moves and style of other combatants. Watch him at the start of the round to learn who. If he walks toward you, puts his hand on his hip, and looks up at you, for example, refer to Nina Williams' Vs strategy.

VS PAUL PHOENIX

This is a very tough match, because Paul's the perfect Eddy killer. Using the Handstand or Relaxed position for too long is a bad idea—Paul can easily score hits with his Phoenix Smasher, among other maneuvers. Whenever you get a chance to counterattack, use well-timed moves that score hefty damage. In this match, timing is everything.

Lending a helping hand.... Boskonovitch created the Cold Sleep machine during experiments in his search for eternal life. The technology, still unproven, was used to preserve his young daughter, who suddenly passed away. Yoshimitsu raised research funds, and as the leader of the Manji party, he helped the poor and disadvantaged. Yoshimitsu visited Boskonovitch when he learned of the many martial artist disappearances. The "Yo-man" was surprised to find Boskonovitch suffering from a mysterious pathological organism. It's believed to have been contracted during lab experiments while making the Cold Sleep machine. Like some weird sci-fi story, Boskonovitch claims he needs blood from Ogre to live. Indebted to Boskonovitch for saving his life, Yoshimitsu enters the tournament to help an old friend.

STRONGEST MOVE

Easily the best move in Yoshimitsu's arsenal is his ability to regenerate energy. While in the meditation, Yoshimitsu can build his levels back up in seconds!

GENERAL FIGHTING STRATEGIES

This basic punching combo may be easy to perform, but its speed and power make it a great move to pull out when things are close.

Yoshimitsu has some excellent power moves and can easily juggle an opponent. He's also excellent when it come to short, sharp punching and kicking attacks. If you can master all aspects of his arsenal, you can constantly attack an opponent. Obviously you must give some consideration to what your opponent is

doing, but you should be able to use a well planned attack to keep your foe blocking while you come up with the next set of moves in this near-constant chain.

Despite Yoshimitsu's excellent attacking ability, you can't forget about defending or your opponent could start to dictate the pace of the match. Interrupting an enemy's attacks and chain combos is very important. The easiest and most common technique for doing this is the basic low punch, an easy move that can be followed by a rising front kick. It's possible to use slightly more powerful moves, such as the Knee Bash, to disrupt an assailant's attack, but as you'd expect, your timing must be more precise and you leave yourself open to a counterattack, should you fail. Start off by breaking their attacks with basic moves, then move on to more complicated ones. For example, if a foe is attacking you, instead of backing off, use Yoshimitsu's low punch to break his or her attack and start a chain of your own.

Yoshimitsu gets caught by Jin for some big time damage.

Here Yoshimitsu demonstrates his ability to kill himself, while taking his enemy out at the same time. A risky move indeed!

Yoshimitsu's fake suicide move is one of the most cunning attacks in *Tekken* 3. If you move in on your foe and perform the move, Yoshimitsu turns and plunges his sword through his stomach and into his opponent. Yoshimitsu loses some energy but because there's no way foes can be expecting this type of unorthodox attack, they won't think to block. Don't overuse this move—as soon as your opponent can anticipate it, the attack becomes useless.

When Yoshi performs his uppercut, he puts his whole body into it and takes a small step forward, knocking your opponent into the air so you can juggle him or her. It's easy to perform and can be done in tight situations.

Using the handle of his sword to maximum effect, Yoshimitsu hammers away on his opponent's head.

Yoshimitsu has some of the best unblockable attacks, so building them into your general fighting style is essential. The Sword Poke unblockable is good for finishing an opponent—it's extremely fast and can even hit an opponent who ducks or has been knocked to the ground. If your energy is running low, Yoshimitsu has the ability to regain his health. A smart player will always be looking for an opportunity to regenerate health—for example, if you knock your foes to the ground, don't wait for them to get up; back off and regenerate some energy.

Yoshimitsu

STRENGTHS

● Yoshimitsu's unique moves keep an opponent guessing and constantly blocking for long sections of the match. His basic standing jab is arguably the fastest move in *Tekken* 3, making it excellent for repeated attacks to an opponent's head. You can use it with well timed side kicks, crouching punches, and the occasional uppercut to produce an excellent fighting style that can be very off-putting to your opponents. If your foe is even slightly hesitant, you'll force him or her to continually block your varying attacks and may even bully him or her into a hurried counterstrike, opening the door for you to use a combo.

● One of Yoshimitsu's main strengths is his ability to juggle opponents. He has the best basic uppercut; plus his Kangaroo Kick, Punch-Uppercut, and Jab-Sweep can all start a juggle. Each of these has an excellent recovery, making the following juggle sequence easy to execute. The key is to know exactly which starter to use and when, as well as develop a repertoire of follow-up juggles.

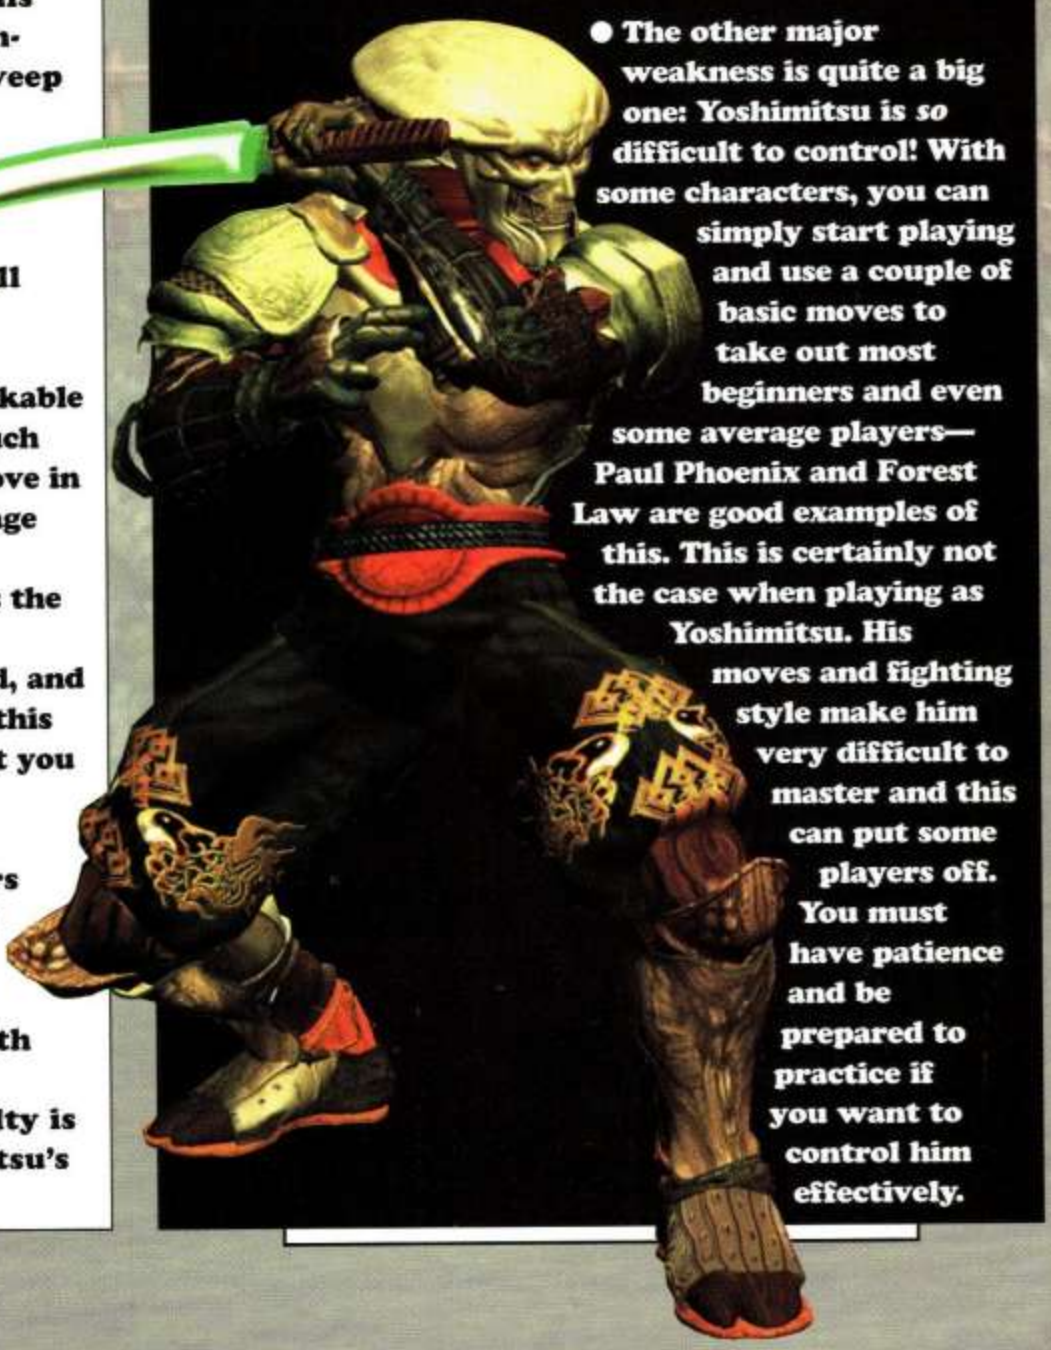
● Yoshimitsu has arguably the best set of unblockable attacks, giving him an advantage over pretty much every other character. He has an unblockable move in all of the following departments: airborne, damage trading, forward rushing, and even a rising unblockable! The most important unblockable is the Poison Breath attack. It's quick, very easy to perform, cannot be countered, cannot be avoided, and can be used to start a combo! If you can perfect this move, you have an excellent weapon that can get you out of a tight spot when necessary.

● Yoshimitsu is one of the strongest characters in *Tekken* 3, but also one of the most difficult to play. You must develop a balanced attack and blend power, speed, and skill. If you can do this, Yoshimitsu is almost unstoppable. With Yoshimitsu, more than any other character, practice is essential. You could say his difficulty is a disadvantage, but in the long term, Yoshimitsu's sheer depth and potential make it a big plus.

WEAKNESSES

● Yoshimitsu's main weakness is his lack of sidestepping attacks. The sidestepping ability is a big part of the *Tekken* 3 game engine, so obviously he's at a disadvantage, particularly when fighting the faster characters. He has a couple of side throws but little else.

● Yoshimitsu only has one special throw! You may think this is only a small problem, but as you become more skilled and play against higher levels of opponents, it becomes a major factor. If you're going to use Yoshimitsu's only special throw, beware—once an opponent gets a grip on it, they'll have no problem escaping or even reversing it!



● The other major weakness is quite a big one: Yoshimitsu is *so* difficult to control! With some characters, you can simply start playing and use a couple of basic moves to take out most beginners and even some average players—Paul Phoenix and Forest Law are good examples of this. This is certainly not the case when playing as Yoshimitsu. His moves and fighting style make him very difficult to master and this can put some players off. You must have patience and be prepared to practice if you want to control him effectively.

KEY TO MOVES

#1: Can link directly into the Stone Backhands.
#2: Can chain into Spinning Low Kicks after one or more Spinning Stone Fists.
#3: After any spin series ending with a backhand after six consecutive spins, Yoshi will become dizzy and fall over. After any spin series ending with a low spinning sweep after five consecutive spins, Yoshi will become dizzy and fall over.
#4: Can only go into Front Kick after two or more Spinning Low Kicks.
#5: If opponent is close when Yoshimitsu teleports, he will appear behind directly behind them. If Yoshi was more than three character lengths away, he will teleport to the same location he was sitting in, but face his back toward opponent.
#6: After six-and-a-half hops, Delayed Sword Slice will do 100% damage.
HC: Hits correctly.
CD: Takes off correct amount of damage.
SDP: Sword Debate Position.

YOSHIMITSU VS CPU STRATEGIES

VS EDDY GORDO

Eddy's confusing fighting style make this fight a test for even seasoned Yoshimitsu players. Avoid close combat, as Eddy possesses many sweeping combo attacks that can rapidly drain energy. Use a combination of unblockable attacks and throwing techniques to slowly defeat him. Don't attempt the reversal attack, as 80% of Eddy's attacks cannot be reversed.

VS YOSHIMITSU

Watch out for Yoshimitsu's deadly kicking combination attacks, the most common of which is the LK, LK, LK combo. If you can work out the timing of these kicks, you can use the reversal move every time. Yoshi also regularly uses the unblockable Flea; counterattack with a kick combo.

VS HWOARANG

For this bout, blocking is very important: If you fail to block his first kick, you can almost guarantee that Hwoarang will follow it up with more. The reversal technique isn't much use, either, as it doesn't work on a large number of Hwoarang's kicks. You must use solid blocking followed by powerful counterattacks to win this match.

VS NINA WILLIAMS

Nina is a tough character but relies on her kicking attacks too heavily. However, because she mixes kick heights so well, blocking them can be a problem. Her Creeping Snake is a good example—it hits M, H, H, L! You must learn to read her attacks quickly, then act accordingly. Beating Nina any time after the fifth stage is a real test.

VS FOREST LAW

Law is one of the average characters who can seem difficult to beat early on, but with a little practice can be quickly defeated. You can use the reversal attack to counter a large number of his favorite attacks, like punching and kicking combos.

VS JIN KAZAMA

You must constantly be on your guard when fighting the extremely dangerous Jin Kazama. Use a mix of unblockable attacks and look out for Jin's favorite combo attack—the roundhouse to triple spin kick combo. Block the first three hits and reverse the fourth.

VS LING XIAOYU

Ling is probably the quickest character in *Tekken* 3 and it's easy to be overwhelmed by her constant attacks. Use the regular jab to break up Ling's barrage then follow up with chain attacks or power moves like the Shark Attack Blow. If Ling uses her Crouching stance, employ the unblockable Running Flea move.

VS KING

King's throwing range is debatably the best in the game, so close combat is a no-no. He has a huge array of multi-part throws that can drain up to 90% of your energy once he's grabbed you! Yoshimitsu's reversal works very well, as it puts you at no real risk but scores large amounts of damage if it connects.

VS LEI WULONG

Use uppercuts and jab punches to break up his fast, confusing attack style, then follow up with combos of your own. If you knock Lei to the floor, never close in on him, as he almost always uses a rising kick attack. Instead, stay back and use Yoshimitsu's Energy Charge to regain some life force.

VS GUN JACK

Gun Jack doesn't have quite as many throwing techniques and multi-part attacks as King, but makes up for this with power and surprising speed. The key is to utilize Yoshimitsu's vast array of unblockable moves to drain his energy quickly—just don't get too close!

VS BRYAN FURY

Bryan has a fighting style that's difficult to read and even harder to beat. The trick is to mix the level at which you attack: Bryan tends to have problems blocking low and mid-range attacks, so use moves like the Slap-U-Crazy or Shark Attack Blow to exploit this weakness.

VS KUMA

You should approach this opponent in the same way as Gun Jack: stay out of Kuma's throwing range and use power moves to knock him to the floor. Get too close and Kuma may grab you, and the subsequent throw can inflict heavy damage, so watch out!

VS HEIHACHI MISHIMA

Your blocking skills must be in top form—you simply cannot afford to give a character like Heihachi any free hits or he makes you pay. Yoshimitsu's reversal attack is very useful, as most of Heihachi's attacks land at high or mid level. A player who has perfected his reversals should have no problems stopping him.

VS JULIA CHANG

Successfully and consistently blocking Julia's kicks takes time and practice, but then you'll have lots of counterattacking opportunities. Wait for Julia to make her move, block her attacks, then quickly launch a counter. Use something like the Door Knocker-Back Knuckle, or even a well timed throw.

VS MOKUJIN

Mokujin can mimic the moves of every character, but if you watch carefully at the start of the round, you can deduce who he's become. Look for a characteristic taunt or move, or a dead giveaway like a wooden sword—Yoshimitsu!

VS PAUL PHOENIX

Paul's common moves, like the Hammer to Power Punch, can be countered with Yoshimitsu's reversal attack, once you learn their timing. The computer-controlled Phoenix, however, hardly ever reverses attacks, so feel free to use all of Yoshimitsu's power moves.

Mishima-style karate, Jin Kazama

Killing two birds with one stone.... A student of Tae Kwon Do who works out at Baek Doo San's dojo, Hwoarang makes a lot of money through dishonest gambling wagers. As part of what's called a fraud team, he and other members pick fights for money. They manipulate the odds by concealing their true strength. Hwoarang escalates the odds against him and makes what appears to be a foolish wager. His opponents soon realize they're the real fools when Hwoarang soundly beats each and every one of them. One day, members of the Mishima Group came to town, among them Jin Kazama. Hwoarang talks them into his game and is matched against Jin. Hwoarang embarrassingly can only manage a draw. He hangs his head in disbelief at the first blemish in his perfect career. Sickened at the thought of having to tell his teacher, Baek, the bad news, Hwoarang vows to practice every day to guarantee that it will never happen again. Then, terrible news—Ogre claims Baek as yet another victim. Hwoarang now has a purpose in life. He will participate in the tournament, beat Jin Kazama, and seek revenge against Ogre.

STRONGEST MOVE

Hwoarang uses his Power Blast move to devastate the usually tricky Eddy Gordo. This powerful kick takes about two seconds to charge, and can inflict as much as 80% damage!

GENERAL FIGHTING STRATEGIES

When fighting as Hwoarang, the key is to keep the correct distance between yourself and the enemy. Just outside sweep distance, Hwoarang becomes one of the best attacking forces in the game! His opponents will have little time to react to his mind-numbingly quick kicks. He has the Bird Hunter to start a juggle combo, and once opponents are on the floor, moves like the Chainsaw Kick and Tsunami Kick can be used to keep them there. From the correct distance, Hwoarang can dominate any fight.

Hwoarang has a great ability to knock opponents into the air with kicking attacks, then he can follow up with a juggle combo.

The Supercharge is an excellent new *Tekken* 3 feature and Hwoarang is one of the characters who can make the most use of it. If you find yourself a long distance from an opponent, quickly power-up the Supercharge then move a little closer to your target and perform the Bird Hunter. Because you're Supercharged, the first hit of the move connects as a counterstrike, which means the second hit connects automatically, knocking your opponent into the air for a juggle combo opportunity. Using the Supercharger before the Bird Hunter turns it back into the powerful move it was in *Tekken 2* (this was the move that Baek used to juggle his opponents) and increases its potential tenfold!

Hwoarang first uses the power charge, then attacks with a Bird Hunter. Because he's charged up, both hits are guaranteed.

The Flamingo Stance is another aspect of Hwoarang fighting style that you can really capitalize on, particularly when fighting the slower characters. This stance makes him much faster than normal, so it's far easier to dodge around an opponent with the sidestep technique. You can rotate around them and launch an attack from behind for big unblockable damage.

The Hunting Hawk is a three-hit kick combo that takes place in mid-air.

Using the Hunting Hawk to its maximum potential gives the Hwoarang player an advantage in a close fight. It's easily one of Hwoarang's strongest moves, as it can be used from so many different positions—it works equally well from close range, sweep distance, and even outside sweep range! The Hunting Hawk connects with three airborne hits that cause around 25% damage and it's unblockable once the first kick has landed.

The Ecoli Righty is one of Hwoarang's overlooked attacks, yet its amazing speed and excellent range make it one of his best. Hang back and wait for your enemy to make a mistake, then come in hard with the Ecoli Righty. The best thing about this attack is that it's virtually impossible to counterattack, even if your foe blocks it (which is extremely unlikely), so you won't put yourself at risk.

Hwoarang

STRENGTHS

● Hwoarang's main strength is plain for all to see—he's the fastest and strongest kicking character in *Tekken* 3! He has countless attacks that he can vary with relative ease to form an assault that's second to none. Moves like the devastating three-hit Hunting Hawk (25% damage), deadly Hot Feet (20%), and the Rejected (31%) have different attacking heights but look very similar in the eyes of an opponent. This allows Hwoarang to catch them napping and drain their energy bar very quickly, particularly when juggle combos are developed. Once the victim has been knocked into the air, you can use one of Hwoarang's deadly jugglers to drain energy—big time!

● Hwoarang's other strength is primarily against the slower, bigger characters. Because he likes to have room to perform his kicking attacks, Hwoarang's most effective range is about three steps away. From there, he can leap in and take advantage. This means he has the perfect fighting ability to combat the strong characters who rely on close combat and throwing attacks. When Hwoarang comes storming toward an opponent in a blaze of kicks, he or she doesn't have chance to use his or her moves.

● Confusing an opponent is easy with Hwoarang, because he has a huge array of moves that look similar to each other. Check out the screenshots of Hwoarang's moves—don't they look similar? Well imagine trying to block or reverse these attacks as they come at you in a fast stream—not an easy task! Opponents tend to have a big problem recognizing, then dealing with, Hwoarang's attacks. If you use a mixture of them, you become a deadly force.

WEAKNESSES

● Hwoarang suffers from a lack of juggle starters—he has no easy way of knocking an opponent into the air. The Bird Hunter and Grand Theft can be used for this purpose but both have major flaws that make them easy to block, and subsequently leave Hwoarang open to counterattack. The second hit of the Bird Hunter can be ducked, even if the first one connects; and to use it as a juggle combo starter it must connect as a counter in order for both hits to connect. The Grand Theft is best performed in the Lefty position, which immediately limits its effectiveness. On the whole, Hwoarang's inability to knock an opponent into the air is one of the weakest aspects of his generally strong game.

● Another real problem is Hwoarang's lack of a good attack reversal. The only move of this type that he has is the Low Parry, which can only reverse low kicking attacks and therefore isn't much use. Hwoarang's only general methods of avoiding attacks are to block or sidestep, both of which work well but aren't the same deterrent as a proper attack reversal. You must learn to overcome this flaw in Hwoarang's moves list if you want to be successful.

● Hwoarang is weak in close range combat. Most of his kicking attacks can cover a large area of ground and still catch an opponent for three or four hits. When he's close, his kicking attacks are too slow—his foe can counterattack before you can complete the move. This means the opponent's attack will be a counter-hit and score more damage than it usually would, spelling big trouble. When fighting as Hwoarang, always try and keep a couple of steps between you and your opponents—it puts them at a disadvantage and makes the most of your fighting style.

HWOARANG VS CPU STRATEGIES

VS EDDY GORDO

Hwoarang's Bird Hunter is the best maneuver to use against the tricky Eddy Gordo. This move is most effective because it stops Eddy from using his annoying sweep patterns that prove so difficult to stop once he gets going. If he goes into the Handstand, use Total Outrage for high damage and an easy beat.

VS YOSHIMITSU

This should be an easy match for the fast, powerful Hwoarang. While Yoshimitsu has some powerful attacks, his tactics are simply too predictable, so you should get lots of counterattacking opportunities. Use power combos to take full advantage of this weakness in Yoshimitsu's style.

VS HWOARANG

This is your mirror match and represents a tough challenge. You must outmaneuver the CPU opponent so that you can make use of Hwoarang's arsenal of kicks. Your blocking must be solid or the computer fighter will overpower you with his attacks.

VS NINA WILLIAMS

Nina is probably the toughest opponent when playing as Hwoarang. Use an attack that starts low then juggle her—the Bird Hunter or Left Cutter, for example. This style of move is good for a couple of reasons: First off, the initial low kicks go under her high punches, and secondly, once he gets started, Hwoarang has arguably the best juggle attacks in the game.

VS FOREST LAW

Law's Junk Yard Kick is one of his favorite moves when fighting Hwoarang. It's hard to counterattack after blocking, so stay back and use the dodge technique to avoid it. This gives you the time and opportunity to counterattack. Overall, you have to be a fast, precise, and powerful attacker. Don't hope that Hwoarang's speed will save you—Law is even faster!

VS JIN KAZAMA

Jin's attack reversal can be a problem if you don't vary your attacks. However, Hwoarang has some kicks that cannot be reversed, so these should form the basis of your attack. They include the Hunting Hawk, Snap Spin Kick, Rip Off, and Crippler—all these moves are impossible to reverse and cause significant amounts of damage.

VS LING XIAOYU

Most of the time Ling will try to use her speed to overwhelm you with many short, sharp punching attacks. To combat this, your blocking must be solid, but then all you need do is counterattack with some big combos. Her lack of strength will mean she's out long before you're under threat.

VS KING

When the match starts, don't just jump in and attack King—back off and block for a moment and you'll see that King has a kick reversal that can cause problems. To take away his reversal advantage, start to use a few of Hwoarang's punching combinations then mix in the kicking attacks.

VS LEI WULONG

You must constantly be on the look out for Lei's low attacks, as he only needs a couple of chances with them to finish you. However, Hwoarang holds a small advantage that you should exploit: Lei likes to use his Play Dead technique and Hwoarang has lots of kicking attacks that can nail him in this situation.

VS GUN JACK

Gun Jack has the power to kill anyone in around two hits, so getting too close isn't a good idea. Use Hwoarang's speed to dodge your way around Gun Jack then take your chances to drive home the advantage with powerful kicking combos.

VS BRYAN FURY

Bryan is a good opponent who is equal in strength to Hwoarang, but you have a speed advantage so this is where the fight is won or lost. Use the dodge technique to move around the battle area and select your attacks carefully. If you try to attack and Bryan counters, you'll be in trouble.

VS KUMA

For this match just use the tactics you applied when fighting Gun Jack. Don't get too close or Kuma will use his power throwing attacks to punish you in a big way. Juggle combos work very well in this match, as Kuma simply hasn't got the speed to block them.

VS HEIHACHI MISHIMA

Heihachi's lack of speed provides the opening in this match, but other than this, it's one of the toughest matches. Heihachi is a powerful opponent who can drain energy very quickly. Use Hwoarang's speed to help you avoid his slow attacks, then fight back with big kicking combos.

VS JULIA CHANG

Julia's main strength lies in her ability to mix up the level of her attacks with amazing variation—your blocking skills are going to be put under pressure. However, provided you can stop her attacks, counterattacking chances come thick and fast. Try using the Bird Hunter to knock her into the air then juggle her with something like the Hunting Hawk.

VS MOKUJIN

Mokujin can mimic every character and changes persona each time, so no fighting advice can be given. However, before the battle begins, he performs a characteristic move. If he walks on and scratches the back of his head, for instance, you should treat him as you would Hwoarang.

VS PAUL PHOENIX

Blocking is all important—Paul is extremely powerful and can kill even strong opponents with a few hits, making him lethal if you can't block well. Most of his attacks land high, so be ready. When you have evaded his moves, come back at him with combos of your own. Paul has an attack reversal, so remember to vary your assault.

In the last tournament she was ordered to assassinate Kazuya, but an untimely quarrel with her sister Anna prevented it. Shortly thereafter, both sisters were captured by Kazuya's corps and were used as guinea pigs in Boskonovitch's Cold Sleep #2 experiment. They did not wake for 15 years. Heihachi's private corps, the Tekken Forces, went to the burial site and excavated Ogre. This unearthing unleashed its spirit, which awakened Nina's resting soul. Now controlled by Ogre, Nina acts robotically, with the command to assassinate Jin Kazama.

STRONGEST MOVE

Power Charge: Nina powers up her unblockable move and unleashes it on the unsuspecting Forest Law. This move is her most powerful, and is extremely useful for quickly finishing an opponent.

GENERAL FIGHTING STRATEGIES

The Geyser Cannon Combo is one of the most effective moves in Nina's attacking arsenal, and it should form the basis of your attacking style. This move has three advantages: First off, it strikes low, then high in rapid succession, making it extremely difficult to block. Secondly, it causes about 30% damage, which is high for a move that only strikes twice. Finally and most importantly, the second hit knocks your opponents into the air, so you can juggle them for even more hits. Check out these two examples of how to use the Geyser Cannon Combo to start a juggle sequence:

The Geyser Cannon Combo is one of Nina's most potent combo attacks—both hits are extremely difficult to block effectively, making it perfect for a surprise attack.

Nina completes the combo and knocks her opponent into the air. Now you can pull out a juggle combo on your helpless opponent for big time damage.

1. Geyser Cannon Combo, Left Punch, Geyser Cannon Combo
2. Geyser Cannon Combo, Jump Kick, Geyser Cannon Combo

It's also a good idea to know Nina's 10-hit combos, to confuse your opponent further. However, you should avoid attacking too much, especially if your opponent is constantly backing away, because your attacks generally cause only low damage. If you press your opponent too much and he or she is backing away, there will occasionally be a gap in your short punches/kicks, which gives your opponent a chance to attack you with huge damaging moves.

Here Nina demonstrates her high then low kicking attack.

Chain moves that begin with a sweeping attack prove to be very useful in *Tekken* 3, because nine times out of ten opponents won't be able to react quickly enough to block low from the Neutral stance. This means that you can score the low hit then continue the combo, and Nina in particular has the speed to really drive this advantage home. This style of fighting is what makes Nina so strong—master it and you'll be deadly!

The Shut Up works well against attacks that cannot be reversed effectively—low attacks or sweeps, for example. It strikes at mid-height, making it most effective against an opponent who has just performed a high attack—you won't hit every time if your foe is crouched low after a sweeping attack! Generally this tactic can be used effectively against any attack style.

As a direct result of her fighting style, Nina players tend to rely heavily on throwing attacks and multi-part combo attacks. This is because she lacks power, so you must compensate with fast, multi-hit attacks. It causes problems while you're learning to play her. Getting yourself into a position where you can use one of her throwing attacks and chain combos is a difficult task, even with Nina's excellent speed. However, once you master these skills, Nina is one of the best characters in the game!

This is the Left Backhand Body Blow. It stuns when a clean hit is made.

Nina's has two punch attacks that are so powerful, they stun a foe when hit cleanly. These moves—the Left Backhand Body Blow and Right Backhand Body Blow—have the added advantage of being very easy to perform. Use them as counterstrikes then follow up with another move on your downed opponent.

Nina Williams

STRENGTHS

● Without a doubt, Nina's biggest strength is her excellent speed. She can string combo attacks and special moves together very quickly, causing real problems for her opponents. When playing as Nina, concentrate on delivering a constant and varying stream of attacks so that your foe never has the chance to think or launch counterattacks. Try using a string of attacks that strike high then low, as this type of tactic utilizes Nina's speed and confuses your enemy at the same time. It also means that your opponent must be an expert blocker to stop both attacks.

● Nina has a number of great combo attacks that make full use of her excellent speed. Two favorites are the Geyser Cannon Combo and the Double Explosion 2. The Geyser Cannon combo hits low then medium, making it very difficult to block effectively, and scores 35% damage when both hits connect. The Double Explosion 2 is even better, as it hits a staggering five times—H, H, H, H, then M—inflicting between 4% and 20% damage. If you can understand and perfect Nina's combo attacks, you'll have a great base from which to turn her into a master character.

● Because of her agility, Nina has a number of moves that vary depending on the way they connect. For example, if a running jump kick connects on a counter-hit, it automatically becomes the Leaping Heel Hold. When this happens you can continue the move with a follow-up attack, known as a multi-part. As soon as the first hold connects, immediately start to input the button combination for the next move in the chain. This skill gives Nina a major advantage over her opponents—she can turn a simple move into a four-hit chain attack that causes major damage.

WEAKNESSES

● One of the biggest problems when playing as Nina Williams is the difficulty of her attacks. While this may not be a problem once you have spent some time getting to know the character, it makes her difficult to control instinctively. Obviously she has a small base of simple moves, but these are almost useless on their own—you need to use her entire arsenal of attacks in order to make her a real threat. For example, Nina's multi-part attacks are among some of the most difficult moves to perform in the entire game. But on the other hand, they're also some of the most effective moves and the single factor that gives Nina the edge in a close match. The only thing you can do is to keep practicing and don't let the difficulty of her maneuvers discourage you. Nina is an excellent character—just expect to spend a lot of time on the ground until you get things right!

● As a result of her Aikido background, Nina tends to rely on throwing attacks, and this can cause problems. Getting yourself into a position where you can use one of her throws is difficult and takes experience. Once again, practice is the only answer.

● The final problem is Nina's lack of power. She can land every strike of a difficult five-hit combo and only inflict a paltry 20% damage, which can be frustrating. (To put this in perspective, Jin Kazama can inflict 35% damage with a single hit.) You find yourself having to perform almost twice as many moves as an opponent to inflict the same amount of damage. While her speed compensates for this to a degree, this shortcoming can leave you at a distinct disadvantage, particularly when fighting *Tekken* 3's stronger characters. For this reason, a speedy, well balanced, and varied attack is essential.

KEY TO MOVES

#1: ⇘ + LP can be substituted as the first move of string, and when used, the second hit (RP) will take 15 damage.
#2: If Assassin Dagger connects, opponent is turned sideways.
#3: Holding ↑ or ↓ immediately after second move will result in a sidestep.
#4: If only the second hit connects, opponent is turned sideways.
#5: If Running Jump Kick connects on counter-hit (CH), it becomes the Leaping Heel Hold.
#6: Cannot be performed after #3.
CS: Cancels unblockable attack

NINA WILLIAMS VS CPU STRATEGIES

VS EDDY GORDO

Generally speaking, Eddy will try and start a combo with a sequence of low attacks. Use either a low sweep attack or the slap to the mid section—both can get him as he tries to land a low attack on you. The CPU also likes to start the combo from about two steps away, then move toward you in mid-combo. This can be stopped in the same way, but it requires better timing.

VS YOSHIMITSU

Always be on the look out for Yoshimitsu's deadly kicking combination attacks. He loves to start the attack from just outside sweep distance and move in as he kicks, but Nina's reversal attack is perfect for stopping this move. Beware, as you must have good timing to make it pay!

VS HWOARANG

Hwoarang usually attacks with a stream of high kicks. If this happens, you can use one of two tactics: First, you can try Nina's reversal attack, which works well but not on all of Hwoarang's kicking attacks. Alternatively, use a basic uppercut to start a juggle combo. Timing is essential, so watch yourself!

VS NINA WILLIAMS

The most important moves in this, your mirror match, are the Can Opener and Bad Habit. Wait for your opponent to attack—usually with the Geyser Cannon Combo—then counterstrike with either move. Your enemy may try to use chain combos, but Nina's reversal can counter these with relative ease.

VS FOREST LAW

The most potent attacking form Law can use are his low kicks—he uses this basic move to lead into a Flash Kick, which inflicts mega damage. Remember, you can reverse a Flash Kick—it just takes near-perfect timing! Use a good variation of attacks and you'll be able to overwhelm Law with Nina's speed.

VS JIN KAZAMA

Jin is a tough opponent, so watch yourself in this match. He often uses his unblockable move, so avoiding it is essential—try a simple sidestep followed by a favorite combo. Kazama's most potent and widely used attack is the Roundhouse to Triple Spin Kick. It's very difficult to avoid and can't be reversed, so just block, then counter strike.

VS LING XIAOYU

If Ling goes into her crouching stance, quickly use the Geyser Cannon Combo to knock her to the floor, before she has a chance to launch an attack (usually a rolling throw combo attack). A high number of Ling's attacks, including the very powerful Fireflower, can be reversed, so be ready with this move at all times.

VS KING

In addition to grappling techniques, King has a huge array of multi-part throws which can drain up to 90% of your energy! You must stop these at all costs. Ideally, duck the initial grab then counter with an attack of your own. King's Staggered Kick can score multiple hits once the first has connected; you must be quick and reverse it on the first attack.

VS LEI WULONG

The best move for this match is the Geyser Cannon Combo: its speed and power make it deadly, and for some reason the CPU always has problems blocking it, even on the higher difficulty settings. If Lei tries to confuse you with his Play Dead move, quickly use Nina's Forward Flip Kick to attack him on the ground.

VS GUN JACK

Gun Jack has huge amounts of power and surprising speed for a big guy. Against a fighter with the speed and agility of Nina, however, he has no real chance. Nina's ability to mix the height of her attacks becomes very useful in this match, as Gun Jack can rarely muster the speed to change his blocking stance in time.

VS BRYAN FURY

Bryan is a tough fighter whose blend of speed, strength, and deadly moves make him difficult to beat. Wait for Bryan to attack, then use either a reversal move, or better still, a throw followed by a multi-part throw. The best thing about Nina's multi-parts is that once you have made the initial throw, the following attacks cannot be blocked.

VS KUMA

For this match, use similar tactics to those used against Gun Jack—put simply, stay out of Kuma's throwing range! In addition, use power or even stun moves like Nina's Bad Habit move to knock him to the floor. Get too close and Kuma is likely to grab you, and his throws inflict lots of damage, so watch out.

VS HEIHACHI MISHIMA

Heihachi likes to attack with power moves like the Twin Pistons and Demon Uppercut. This can lead to his downfall and give you an advantage. Because of Nina's speed, you can counterattack his power moves with strong moves of your own. Use a move like the Bad Habit, which stuns your foe, then go into a combo attack, such as the Flash Kick to Blonde Bomb. These attacks cause high damage and punish Heihachi for his mistakes.

VS JULIA CHANG

Julia Chang has comparable speed and strength to Nina's, so you must have a sound battle plan. Use a mixture of high and low attacks to confuse Julia and break her guard. The computer will try and counterstrike with multi-level attacks, so you must anticipate her chain attacks and block accordingly. If you can do this, you'll have plenty of chances to counterattack.

VS MOKUJIN

Mokujin can use the moves of every character, so there are no specific tips. However, if you watch how he acts at the start of the round, you'll know which moves he'll have. If he runs his fingers through his "hair" then shakes his head, for example, he's imitating Paul Phoenix.

VS PAUL PHOENIX

Generally, if Paul's backing off, he's preparing to execute one of his power attacks; if he moves toward you, he'll probably try a sweeping attack. Paul always tries to follow up with a charging attack intended to hit you as you get to your feet. Wait until he closes in then use a rising attack. Probably the only way to win is to use Nina's speed. Wait for him to come forward then use skillful blocking and a counterattack. This is difficult and makes this match hard to win.

Paul Phoenix is a man possessed. Forced to forfeit the second King of Iron Fist Tournament by a traffic jam, he has spent many years continuing his training to be the best of the best—and waiting for a chance to prove it. That chance has come in the form of an invitation to the third King of Iron Fist Tournament, and Paul is determined not to waste another opportunity for glory.

STRONGEST MOVE

The Phoenix Smasher is the one to beat your opponents with. Tap ⇩, ⇘, ⇨, RP for 49 damage points!

GENERAL FIGHTING STRATEGIES

Paul Phoenix demonstrates his Thruster Special Art. This fast and deadly attack is very powerful and, better still, it can be used to start a juggle combo.

The Thruster is the perfect move to use when your opponent is trying to attack with a high-hitting attack such as a roundhouse kick. Because Paul crouches low as he performs the move, he avoids his opponent's attack altogether. Use the move from about two steps away and the chances are that the Thruster will knock your opponent into the air, giving you the opportunity to use a juggle combo. However, if your opponent is still attacking when the blow connects, the move counts as a counterstrike, stunning your foe.

The Shoulder Tackle works well against attacks that cannot be reversed effectively, such as slow attacks or sweeps. Shoulder Tackles strike at mid-height, making it most effective against an opponent who has just performed a high attack on you; you may not hit every time if your foe is crouched low after a sweeping attack! Usually this tactic can be used effectively against any attack style.

Paul Phoenix attacks Lei Wulong with a well-timed Shoulder Tackle. This maneuver has the advantage of speed and power.

Paul's unblockable move is the Burning Fist. It takes Paul about three seconds to charge this move, but the payoff is well worth it: The Burning Fist can drain 70% of an opponent's energy in a single hit, and sometimes more if it hits as a counterstrike! The best time to use it is after an opponent has been knocked to the ground. Take about three steps backward from your downed foe, then begin to charge the Burning Fist. Now if your timing is right, your opponent gets back on his or her feet at about the same time Paul performs the move! This doesn't work every time, but if you connect the attacks, you should almost certainly kill your opponent. It's also worth noting that you can't be counterattacked if you use the Burning Fist in this situation. If your foe is smart enough to avoid the punch as he or she gets to their feet, he or she simply won't have time to launch a counterattack and take advantage of the few seconds that Paul remains stunned after using the Burning Fist.

This is the Burning Fist, Paul's fearsome unblockable attack.

The Hammer Punch special art is arguably Paul's most important move, the opening to most of his hard-hitting combo attacks. For example, you can follow with the Hammer to Power Punch, Neutron Bomb, or even a low sweep attack. In addition to its combo potential, the Hammer Punch can strike a crouching opponent. This is common when fighting an opponent who likes to use counterattacks: when he or she crouches and waits for you to make the first move, use the Hammer Punch to knock him or her to the floor. Another way you can use this move is to attack an opponent who has fallen to the ground, as it drains more energy than the punch and is easier.

The Hammer Punch can be followed up for mega damage.

The Ultimate Tackle is simple to do and knocks an opponent to the ground instantly. From here you can deliver a barrage of punches to your opponent's face for average damage. For greater damage, use the Arm Breaker or the Ultimate Choke. Both are cool moves, but the latter requires lots of practice.

When Paul connects with his Phoenix Smasher, a huge flash of light accompanies the point of impact.

Paul Phoenix

STRENGTHS

● Paul is pretty quick on his feet. He may not be quite as fast as characters like Forest Law and Ling Xiaoyu, but he has sufficient speed to mix it with them without being given the runaround. This factor has a number of advantages, but most importantly it gives him the maneuverability to use his powerful special arts and throwing techniques to maximum effect.

● Perfecting counterattacks and reversal moves is important in *Tekken* 3 and Paul Phoenix is a good character to use them. Paul's speed means that he can pull off counterattacks with ease, plus he has a reversal attack. This move can be used to reverse an opponent's attack that lands at high or medium height. Using this move effectively can really unnerve your opponents—they won't be quite so eager to attack if they think it's going to be reversed right back at 'em!

● Another factor that makes Paul a great character is his ability to fight in two totally different ways! You can fight with honor and skill, or you can kick your opponent when he's down. Both methods work well on their own, but a Paul Phoenix expert will mix up the two methods and create a fighting style that amazes and infuriates opponents. It takes time and practice but it's well worth the effort.

● Despite his strength, Paul is not a hard character to learn. Start by learning his power attacks—Hammer Punch, Hammer to Power Punch, and Phoenix Smasher—then perfect your reversal technique. Those honorable moves will have your opponent on his or her back in five seconds, but at the same time he or she will be saying, "Wow, you're good!" Now learn a few dirty tricks, like repeatedly attacking with the Neutron Bomb kick as he or she gets up, or using the Hammer Punch to attack an already downed foe.

WEAKNESSES

● Paul suffers from a lack of low attacks. This means that an opponent can concentrate on blocking high and neutral for most of the match. The occasional move that starts low—the Rapid Fire, for example—is easily avoided and counterattacked. As the Paul player, you must understand this weakness and do all you can to minimize its effect by using varied attacks.

● Paul has a relatively poor close combo ability, and most of these are only two-hitters. The combo usually starts with a close-range attack, like the Hammer Punch, to set-up Paul's opponent for the second hit, which is a power move, i.e., a Hammer to Power Punch, Flash Elbow or Phoenix Smasher. The problem is that the first attack has a huge set-up time, making it easy for even an average player to reverse the attack. For this reason, using the same two-in-one over and over again is not recommended. You should also bear in mind the character you're fighting—some are better at reversal attacks than others.

● Paul's third problem is also due to the fact that around 75% of his attacks strike at a high or medium level. Almost all of these attacks can be reversed—his 10-hit string, Hammer to Power Punch, jumping kicks, and Hammer Punches, for example. Again, you must use a variety of different attacks to prevent this from happening.

KEY TO MOVES

#1: Can only be performed when opponent is downed.
#1b: Follow up from third hit of Ultimate Punches. Paul, Nina, King, and Jin can reverse with LP + RP, RP, RP, RP, RP and deal 10 damage to Paul.
#2: Final hit does 19 damage if delayed.
HC: Hits correctly.
CD: Takes off correct amount of damage.
*: This happens when your opponent tries to hit you, and you grab them before they hit you.

PAUL PHOENIX VS CPU STRATEGIES

VS EDDY GORDO

Avoid close combat—against someone as unpredictable as Eddy, Paul could get into real trouble. Keep your distance and wait for Eddy to attack, then use a Hammer to Power Punch to retaliate. If timed correctly, it connects as a counterstrike, which inflicts greater damage!

VS YOSHIMITSU

The most important thing to watch for when fighting Yoshimitsu is his deadly kicking combination attacks, the most common of which is a left kick, left kick, left kick combo. If you can work out the timing of these kicks, you can use Paul's reversal move to counter them every time. The other move that Yoshi uses is the Flea. Counterattack with the Hammer Punch.

VS HWOARANG

For this bout, blocking is very important—if you fail to block his first kick, he will probably follow up with more. Don't try and use Paul's reversal technique, either, as it doesn't work on many of Hwoarang's kicks. Solid blocking followed by powerful counterattacks is the only way to win.

VS NINA WILLIAMS

Nina relies on kicking attacks a little too heavily, but mixes the attack height of her kicks so well, blocking them can be a problem. You must learn to read her attacks quickly, then act accordingly.

VS FOREST LAW

Use Paul's reversal technique to counter Forest's kicking attacks. Even the Flip Kick, which Law tends to use at the end of a combo, can be reversed! If Law attacks with a string of punches, always block high, as this is where these moves do the most damage.

VS JIN KAZAMA

Jin Kazama attempts to squash his opponent at every opportunity. To combat this aspect of Jin's technique, use defensive moves like the sidestep and reversal attack. Beware of his four-hit Roundhouse to Triple Spin Kick combo, which he likes to use from outside sweep range. You must block the first three hits then reverse the fourth.

VS LING XIAOYU

Look out for her Triple Slap to Palm combo, which you can easily reverse. Approximately 80% of her moves hit high, so well-timed reversals take her out with ease. When she uses her crouching stance, counter with the Hammer Punch.

VS KING

For this match, keep one thought in mind: stay out of King's throwing range! Use lots of mid-range attacks to combat his throwing techniques—this works well because most of King's moves leave him vulnerable in this area. Counterattacking is another way of taking King's energy with minimum risk. However, reversing his attacks is very difficult, so beware.

VS LEI WULONG

Use a combination of low attacks and power moves like the Hammer Punch and Flash Elbow to drain his energy in large chunks. When Lei is knocked to the ground, don't get close, as he'll probably use kicking attacks to surprise you.

VS GUN JACK

The key is to use powerful attacks like the Hammer to Power Punch, Rubberband Attack, or Neutron Bomb from a safe distance. Attacks that strike at two levels are particularly useful against Gun Jack, as he rarely has the speed to change his blocking stance in time. If his uses his low kicking combo, use the Rapid Fire to Stone Breaker.

VS BRYAN FURY

Use Paul's powerful two-hit attacks, like the Hammer to Power Punch. The trick is to mix the level at which you attack. Bryan tends to have problems blocking low, so use moves like the Rapid Fire to Phoenix Smasher or Rapid Fire to Stone Breaker. Both strike low then high, causing big problems for Bryan!

VS KUMA

This match should be approached in the same way as the bout against Gun Jack: stay out of Kuma's throwing range and use power moves to knock him to the ground. Get too close and Kuma will probably grab you, and his throws inflict lots of damage, so watch out!

VS HEIHACHI MISHIMA

Because a high proportion of Heihachi's attacks land at either a high or mid level, a player who has perfected Paul's reversals should have no problems stopping him. His lack of speed means that moves like the Twin Pistons and Demon Slayer have huge set-up times, and once again this gives you the opportunity to reverse Heihachi's attack.

VS JULIA CHANG

Successfully and consistently blocking Julia's kicks takes time and practice, but afterward you have lots of counterattacking opportunities. Wait for Julia to make her move, then block it and quickly launch a counter of your own. The Phoenix Smash and Hammer to Power Punch are both perfect for this.

VS MOKUJIN

Mokujin can mimic the moves of every character, so no tactics can be given. One tip helps: as the bout starts, Mokujin performs the taunt of the character he's going to imitate, so if he runs his fingers through his hair and shakes his head, for example, you know he's going to use Paul Phoenix's moves.

VS PAUL PHOENIX

It's easy to block Paul's attacks once you learn their timing. His favorite moves are the Hammer Punch, Hammer to Power Punch, and Shredder, all of which can be reversed. The CPU Paul Phoenix hardly ever uses reversals, leaving you free to use Paul's power moves when you want to, without the threat of being countered.

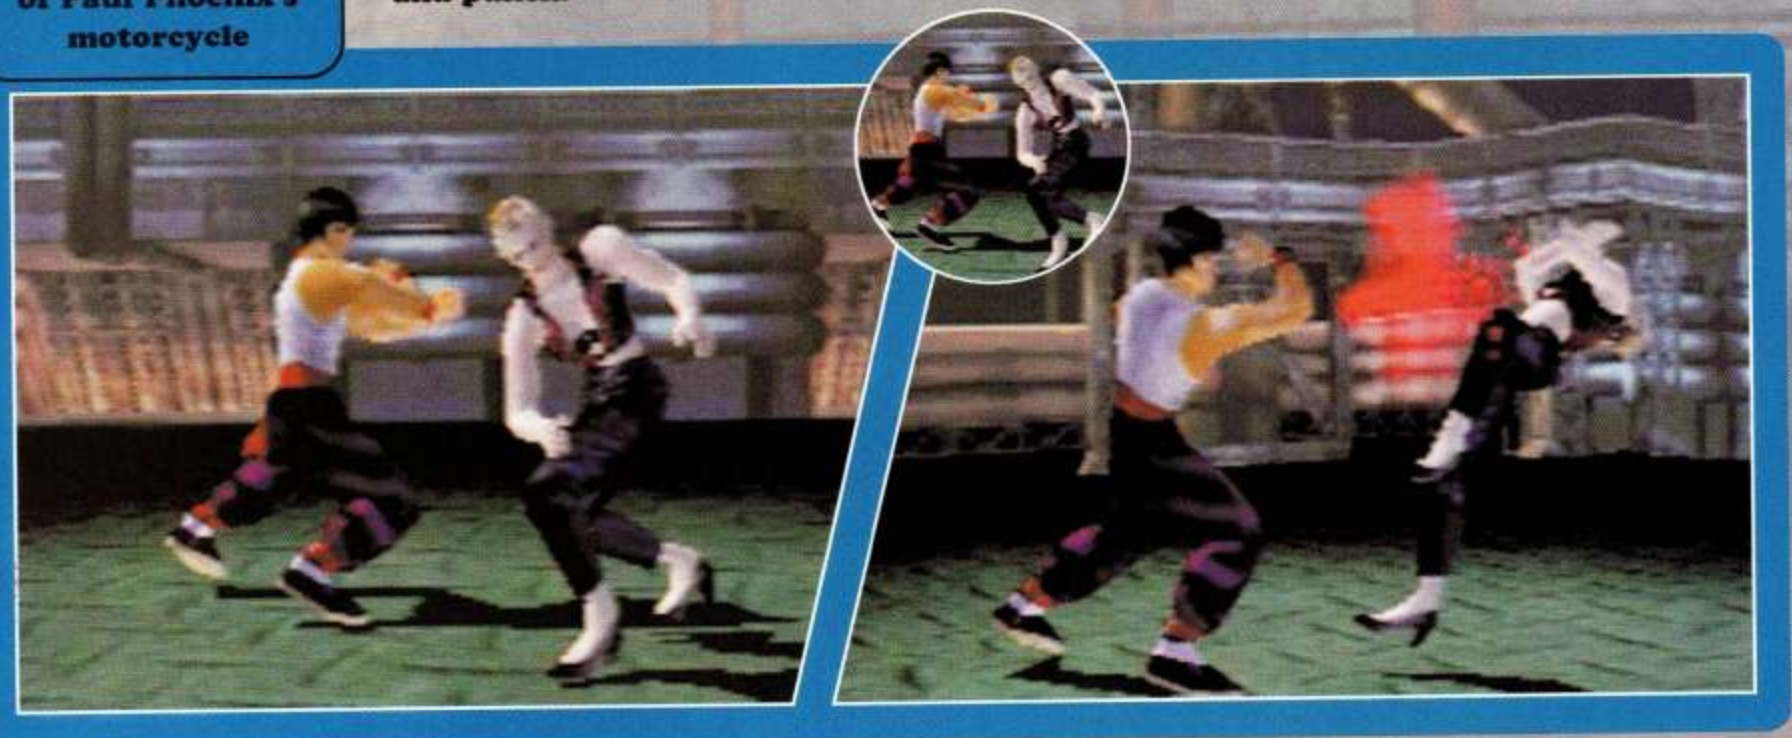
Living in his father's shadow.... The proud son of Marshall Law, Forest trains at his father's dojo to achieve Law's success and greatness. As a protective father, Marshall has forbidden his son from entering any contests outside the dojo. Marshall's long-time friend and competitor, Paul Phoenix, visits once every few months to spar with Marshall. One day when Paul arrived, Marshall was away supervising the building of a new dojo. Paul insisted that Forest join him in some training exercises. Forest declined, knowing that his father would disapprove. But Paul wouldn't take no for an answer. Unaware of Marshall's restrictions on fighting, Paul suggested to Forest that he join "The King of Iron Fist Tournament 3." Paul sold Forest on the idea by telling him he's a better fighter than his father. Forest knew his father would be angry, but he had to prove that he was worthy of one day inheriting the dojo. Marshall was enraged when he found out what happened. To him, it was as if his son had been kidnapped.

STRONGEST MOVE

Forest's strongest move is probably his Unblockable Counter Attack, most particularly when an opponent moves in close for a punch. The relatively short sequence lets Forest pull his foe off-balance, and then counter with a nasty punch or a more stylish spin and punch.



GENERAL FIGHTING STRATEGIES

The Junkyard Kick is a powerful three-hitter that combines Law's excellent speed with aggressive power. Use it as a counterattack for big damage.

The Junkyard Kick combo is easily one of Law's best moves—it's simply excellent! It's mid/low attack levels force your opponent to block high/low/high, which is extremely difficult when the moves are coming as fast as in this combo. The last kick can't be ducked, but it can be blocked. There's no easy chance of retaliation, which makes the move almost a free attack! Against average players, the initial punch and low kick prove to be a complete nightmare. They just can't seem to block them, even if you use the move over and over again. The punch is extremely fast, so blocking it is almost impossible unless it's accurately anticipated. Unless your playing against a complete novice, the final kick will probably be blocked, but this doesn't matter—the recovery time is so fast, you can't be caught on the counterattack.

The Fake Step is great for confusing an opponent and can be followed by the power move of your choice.

The Fake Step is another awesome move. It can be either successful or unsuccessful, and this will determine what can follow it. You have the option of chaining one of five moves onto the end of it. The follow up kick can inflict 22% damage, even more on a counter-hit. This move is particularly useful for quick finishes against early level CPU enemies or just average players. It's almost impossible to see the punch coming and opponents are often confused by the way Law hops into the move. The punch that you can chain to the Fake Step has an extremely high priority over other moves and is very fast, making it the perfect weapon to use when you're about to be attacked.

When used sparingly, the Dragon Storm combo can really make the difference in a close match, for two good reasons: If the first part of the attack connects as a counter-hit, the second hit is guaranteed, giving you a free juggling opportunity. Secondly, the Dragon Storm's three hits can each be delayed slightly, and this makes it difficult to anticipate. If you use a slightly different delay on each punch every time you use the combo, you'll make blocking all three hits very tough indeed. The problem with this move is that it's not fast, and this makes the last punch of the sequence an easy target for good counterattacking players. You can solve this by not completing the combo every time you use it—your opponent won't know if the last punch is coming or not. Variation is the key.

Here Law takes advantage of a downed foe by using the Shoulder Tackle.

The shoulder ram attack, performed by simply running toward your opponent, is a move that many people have problems blocking, but don't overuse it and become predictable. A neat trick and a way to vary the move is to use a backflip to nail the dazed opponent. The backflip connects as you land, causing huge amounts of damage. You can even use the double backflip for more hits, but this requires even better timing.

Forest Law

STRENGTHS

● Law's biggest strength is his ability to juggle an opponent quickly, then follow up with a powerful combo time after time. Utilizing this technique is the key to winning with Forest Law—if you can create good juggling opportunities then make effective use of them, you're tough to beat.

● Moves that will help you as you become a more skilled *Tekken* 3 player are Law's Upper and Lower Dodge moves. These allow him to reverse low- and mid-height kicking attacks with ease—if your reversal is successful, your enemies' attacks are brushed aside, leaving you free to attack from the side. While this isn't quite as useful as Paul Phoenix's or Jin Kazama's attack reversals, it gives Forest the ability to repel an opponent's attack while creating a chance for himself. It's not a set reversal—when Paul reverses an attack, for example, he performs a set move with set damage—so when it's been used, you can enter a combo to cause mega damage.

● Law's ability to chain punches with spectacular flip kicks is a major strength. You can start a combo with a basic punch for a relatively safe and risk-free attack, but once you've taken the initiative, you can follow it with a powerful special attack like the Back Flipper. Try this move whenever you get a counterattacking opportunity. Punches get the attack started quickly and the Back Flipper drives home the advantage. This sequence is great for knocking characters like Eddy Gordo out of their low attacking moves, plus it's the perfect juggle-starter.

WEAKNESSES

● Like several others, Law's unblockable takes a few seconds to charge up, so your enemy can see it coming a mile away.

● Some people criticize Law for being a basic character with some flashy flip kicks, and this is a fair point. If you play as Forest Law, you find yourself using the Back Flipper as a "go to" move in almost every match—if things are close and you need to score a hit, the Back Flipper is what you do. Your opponents will soon become wise to your methods and begin counterattacking. Take a look at Law's special attacks; he hasn't got that many compared to most characters, and this is why you find yourself returning to the Back Flipper time after time. It's your job as a Law player to prove the critics wrong and mix up your attacks so you don't become a stereotyped Forest "Back Flipper" Law!

● Law's 10-string attack is quite weak. In fact, when you're fighting against the CPU, you're advised not to use it after Stage 4 or 5. Law is more effective if you use short attacks of varying heights and mix them with low sweeps and low attack reversals. Long combos are not his strong suit, so don't use them often.

● Forest is not a power character, and this seriously affects the way you must play. Fighters like Paul Phoenix, Heihachi Mishima, and Bryan Fury can use power moves to quickly drain opponents' energy without much thought. Law simply cannot do this. You must find other ways to use his strength to defeat enemies, and this is very difficult for novice *Tekken* 3 players.

FOREST LAW VS CPU STRATEGIES

VS EDDY GORDO

You must be familiar with Eddy's low sweeping attacks and know how to counter them in a split second—a large proportion leave him open to counterattack, once you block them. Use a move that knocks him into the air and create a juggle combo. This match will basically come down to how well you utilize the kick reversal.

VS YOSHIMITSU

It isn't that hard to beat Yoshimitsu. You should be able to use Law's high/low dodge attack to counter him with relative ease. Use the punch/Back Flipper combo, as it proves to be the perfect move when Yoshimitsu uses his Flea move (he basically sits on his sword!) and causes major damage, since it connects as a counter-hit.

VS HWOARANG

This match is tough, but if you can use Law's mid and low kick reversal, you have a winning advantage over the kick-mad Hwoarang. Simply wait for him to attack then use the reversal attack to push him aside and start your own juggle combo for a big counter-hit.

VS NINA WILLIAMS

Nina is a thorn in Law's side. The Junkyard Kick is the best move to use on her, but if you rely on it you run the risk of Nina reversing it! You must basically block whatever she throws at you then counterattack with a juggle combo. The Back Flipper is great to start this sequence, as it's very fast.

VS FOREST LAW

This fight is decided on how well you anticipate your double's moves and counter them. Use the Upper Dodge to stop his kicking attacks then juggle him on the counter-hit for major damage. This match can be tricky if you don't vary your attack, as Law catches on quickly, so keep him on his toes with a constantly changing pattern.

VS JIN KAZAMA

Jin is a very tough opponent, as he has an attack reversal and the speed to capitalize on Law's mistakes. He also uses power moves like the Spinning Demon, Twin Lancer, and Demon Scissors to drive home every advantage he gets. You must use skillful blocking to give yourself counterattacking opportunities.

VS LING XIAOYU

Both characters are well-matched in speed, but Law's strength (his juggling ability) will let you take advantage of one of Ling's weaknesses (she must get close to attack). Lure her in close, get her up in the air with the Dragon Storm, then use combo to finish her off.

VS KING

The CPU version of King isn't that good and seems to have problems playing to his strengths. However, when he catches you for a throw, you can be sure he'll follow it with a devastating chain throw. Stay at a safe distance for the majority of the match and move in with the Junkyard Kick whenever you can.

VS LEI WULONG

Lei is a decent fighter, but when the CPU plays him, he seems to be a sucker for a well timed Dragon's Tail. This move is even more useful when Lei tries his Play Dead technique. This fight gets dangerous when Lei comes at you with his high/low attacking style, when you should block solidly then retaliate with a juggle combo.

VS GUN JACK

This match is a piece of cake. The CPU Gun Jack is a little pathetic and against the lightning-fast high/low attacks of Law, he has no chance. He's so slow, you should be able to counter with the Junkyard Kick almost any time you like. Remember: unless you're attacking, stay well out of his impressive throwing range.

VS BRYAN FURY

Bryan has frightening power moves but a skillful Law player can use speed and counterattack Bryan at every opportunity. The other point to remember is that Bryan has no attack reversal, so you can use high kicking and punching attacks pretty much as you please—there's very little he can do about it.

VS KUMA

This large, slow creature excels at throwing moves—a fair description of Gun Jack, too, but Kuma's even easier to beat. The basic tactic is to stay out of his throwing range and use the Junkyard Kick to counterattack him at every opportunity.

VS HEIHACHI MISHIMA

Despite his huge power advantage, Heihachi isn't that hard to beat. Law's speed should be used to run rings around him, and juggle combos are the perfect way to capitalize on the chances this technique provides. Some of Heihachi's moves have a huge lag time, and this also gives perfect counterattacking opportunities.

VS JULIA CHANG

Julia can be tough to beat, particularly when you're playing on the high difficulty setting. Her ability to mix high/low attacks and combos, coupled with her excellent speed, is a blocking nightmare that must be overcome if you want to win. If you can handle her attacks well, you'll have lots of chances to counterattack.

VS MOKUJIN

The master mimic uses the moves of other characters, and he changes the person he imitates each round. To work out what you're up against, watch closely as the fight begins. If, for example, he scratches the back of his neck, use Hwoarang's Vs strategy.

VS PAUL PHOENIX

Paul is by no means a pushover, but Law is one of the few characters who actually has an advantage over him. You can use a quick sidestep or the Fake Step to avoid Paul's more powerful attacks, like the Phoenix Smasher and Hammer to Power Punch, then counter with juggle combos. Basically, use Law's speed to take out the mighty Paul Phoenix!

Meeting with destiny.... At the age of 15, Jin found out that he was Kazuya Mishima's son. At the same time his mother, Jun Kazama, died. Jin trained himself under the supervision of Heihachi every day with the intention of defeating Ogre, who is supposed to have killed his mother. Heihachi was not only his grandfather but also a reliable teacher. Four years have passed. Having mastered the Kazama-style of judo and the Mishima-style fighting karate, Jin starts to take action as a martial artist.

STRONGEST MOVE

This Lightning Uppercut is by far Jin Kazama's most powerful move. Use it to devastate a foe in seconds.

GENERAL FIGHTING STRATEGIES

Jin Kazama is the son of Jun Kazama and Kazuya Mishima, characters who were featured in *Tekken* 2 but died before the third tournament began. So, as you'd expect, his overall fighting style is basically a mixture of the way his parents fought. Anyone who's played *Tekken* 2 will understand that this is a deadly combination indeed. Kazuya and Jun were very strong characters, but now you have a fighter who combines their strengths—the speed and skill of Jun with the raw power of Kazuya! If you can master Jin, you have a deadly character on your hands.

When playing as Jin, you should use his blend of speed, power, and reversal attacks to overwhelm your opponent.

The Flash Punch is a powerful, lightning-fast, three-hit combo attack.

Jin's basic Flash Punch Combo is one of the easiest moves in his arsenal to perform and also one of the most effective. Jin launches a string of three powerful punches in quick succession. They strike an opponent high, high, then medium, giving the string a little variation. The third hit is delayed slightly, but if all three blows connect, they drain 33% of the opponent's energy. This move is best used as a counterstrike: Wait for your foe to attack, block or avoid their advance (ideally, you should avoid it with a sidestep), then simply retaliate with the Flash Punch Combo. The overall speed of the combo means it's fast enough to be used in regular play—it's particularly good for putting an opponent under constant pressure!

Here Jin demonstrates his unblockable move, the Lightning Uppercut. Fast and powerful—a fearsome combination!

Jin's unblockable move is easy to perform and deadly when executed. Unfortunately, it takes lots of time to wind up, so using it effectively is quite tricky. Jin Kazama spins around before launching himself into a powerful uppercut. While he's spinning, powering up the move, Jin is extremely vulnerable to a counterattack. You must use this move sparingly. Try it on a downed opponent: Once he or she hits the ground, begin the unblockable move, so just as your foe gets to his or her feet, you're ready to execute the move. You may not hit every time, but you only need it to work once and the bout is yours.

Once an opponent has been knocked to the floor, always follow with a ground attack. In a close match, it makes all the difference.

Jin's showing off one of his many multi-level combos.

This also means that while the move is powering up, you cannot be attacked. This tactic works particularly well when fighting against the weaker characters.

Jin Kazama has a number of 10-string attacks that can be used to drive his advantage home. However, you should first become familiar with his basic attacks; only then should you begin to work on 10-string chain attacks. These long, but very powerful attacks are best used as a counterstrike—wait for your foe to make a mistake then punish him with one. Also remember that just because Jin is capable of chaining all 10 hits together, you don't necessarily have to use all of them. If you want, you can just use the first five hits of the combo. In fact, on the later levels, where the CPU tends to reverse the long 10-string attacks, this tactic is a good way of adding variation to your play.

Jin Kazama

STRENGTHS

● Jin's main strength lies in his all-around ability. He possesses aggressive attacking moves, lots of power, plenty of speed, and even a reversal move—which in *Tekken* 3 is a huge plus point! If you can master these aspects of his abilities, you have a character who can do pretty much anything. A competent Jin player should be able to hold his own in a match against any other character, even if the human controlling this fighter is slightly better, simply because of Jin's versatility; a master Jin player could become unbeatable!

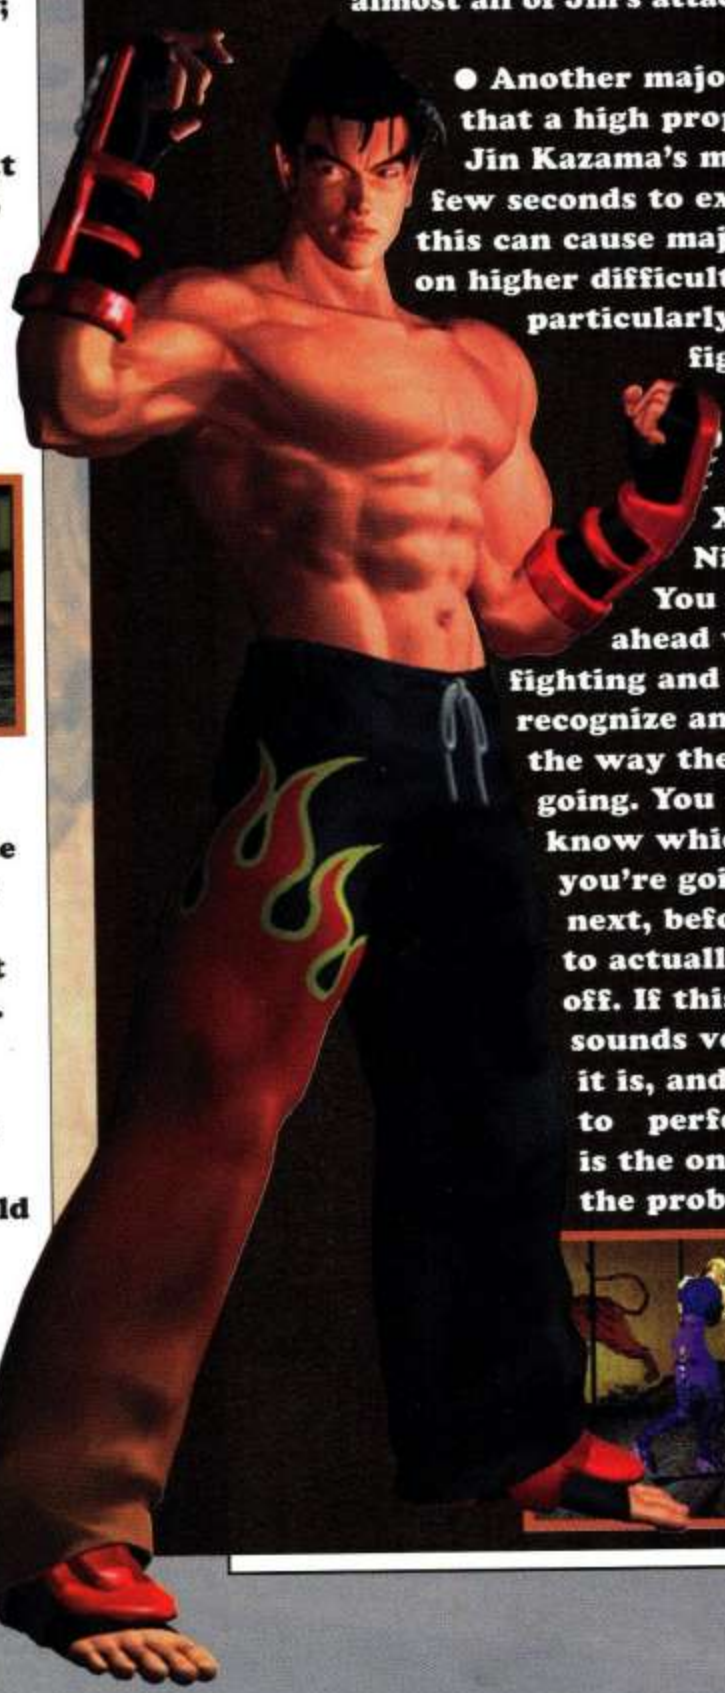
● As your playing skill improves, you should start to mix up the range of your attacks, so that opponents will find it hard, if not impossible, to predict what is coming next. Varying your attack means you'll be much less likely to be on the receiving end of a reversal move, and confuse an opponent into making mistakes, too.

● Jin possesses a large selection of throwing techniques, and this can be a real advantage when playing a skillful opponent. Jin has the ability to throw opponents from directly in front of them, behind them, and even from the side. A tactic that works extremely well (even on higher difficulty settings) is to sidestep an attacking opponent then perform a side throw before he or she has a chance to readjust to your new position. This even works against the faster characters in *Tekken* 3, like Ling Xiaoyu, but is particularly effective against the larger fighters.

● In addition to all his other moves, Jin has two useful techniques that add yet another dimension to his fighting style: a reversal move and an Ultimate Tackle. If you played *Tekken* 2, you should be familiar with them both. You can reverse any mid- or high-level attack, putting an aggressive opponent on his heels. For his Ultimate Tackle, Jin charges toward his foes and knocks them to the ground. From this point he can perform the Ultimate Punches or the Cross Arm Lock move. These two maneuvers make Jin even more unpredictable.

WEAKNESSES

● Compared to some of the other characters in *Tekken* 3, Jin has a small array of moves, and this can become restricting when you reach a certain level of play. You can find yourself relying on only a handful of moves to win matches, making your fighting style predictable and linear. An observant opponent can guess what you will do and act accordingly. For this reason, you must develop a balanced offense by learning almost all of Jin's attacking moves.



● Another major problem is that a high proportion of Jin Kazama's moves take a few seconds to execute, and this can cause major problems on higher difficult settings, particularly when fighting against fast characters like Ling Xiaoyu or Nina Williams. You must think ahead while fighting and quickly recognize and react to the way the match is going. You need to know which moves you're going to use next, before you need to actually pull them off. If this skill sounds very difficult—it is, and takes time to perfect. Practice is the only solution to the problem.

KEY TO MOVES

#1: On counter hit (CH), the stun created by the first hit is inescapable. If both hits are used to stun on counter hit (CH), opponent can escape by tapping →.
#1b: Follow up from third hit of Ultimate Punches. Paul, Nina, King, and Jin can reverse with LP + RP, RP, RP, RP, RP and deal 10 damage to Jin.
#2: Jin is invincible for a short time. If opponent attacks while Force Block is activated, they will be pushed away.
*: Side kick (LK) or low sweep (RK) can be linked after uppercut finish.
HC: Hits correctly.
CD: Takes off correct amount of damage.

JIN KAZAMA VS CPU STRATEGIES

VS EDDY GORDO

Eddy Gordo's low, swinging style of attack can cause problems, and once he has started a sequence of sweeping attacks, there's nothing you can do about it. You cannot use your reversal move on most of Eddy's moves, because they hit below the waist. Instead, use Jin's Demon Scissors to take out your crouching opponent. Timing and blocking ability are essential, so be careful!

VS YOSHIMITSU

If you have the game set on a high difficulty setting or are on round six or beyond, go for a more defensive style of play. Use Jin's reversal attacks and throwing techniques to punish Yoshimitsu when he makes a mistake. This tactic works particularly well on his kicking moves, which he uses a lot. You should see them coming a mile off, making them easily reversed.

VS HWOARANG

Jin's ability to reverse attacks gives you the upper hand in this tough match. Hwoarang tends to overuse his high kicking attacks, and this is an area in which you can gain another advantage. Wait for him to attack with a high kicking combo (which he will at almost every opportunity), then duck the attack and retaliate with a Demon's Paw.

VS NINA WILLIAMS

Whenever you knock Nina to the ground, you should always follow up with an attack—use the simple ground punch, as it's easy to perform, plus if your opponent manages to get back up, you won't leave yourself in too much trouble. Jin's reversal move can be used to good effect, particularly when Nina uses her kicking attacks.

VS FOREST LAW

Forest's predictable fighting style leaves him wide open to a character as versatile as Jin. You can reverse most of Law's favorite chain attacks with relative ease—with Jin's speed, this should be no problem. Add to this some of Jin's more powerful attacks, like the Double Lift Kick, and you have an easy victory, even on higher difficulty levels.

VS JIN KAZAMA

This is your mirror match and Jin's combination of power and speed make it a tough one to win. He likes to attack with power moves, including his unblockable attack, with alarming regularity, so be sure to avoid them. A simple sidestep does the job nicely and sets you up for a counterattack.

VS LING XIAOYU

Jin has the perfect weapon to combat this fast, low-stance character—a roundhouse followed by triple spinning kicks. Perform this combo whenever Ling uses her Crouching stance and you'll take her out every time, inflicting 25% damage! Ling's speed is the only other thing that may cause problems; combat this with well-timed reversal moves.

VS KING

King uses multi-parts and throwing techniques with alarming regularity. When he ducks slightly, a multi-part is coming, so grab him and use a throw of your own. If you're caught in one of King's multi-part throws, quickly tap the LP, RP or LP+RP buttons to break it. Use power moves like the Twin Lancers or Dragon Punch to finish him quickly.

VS LEI WULONG

If Lei tries to use his Play Dead move, simply back away from him and wait. You have little to gain by moving in and attacking him, as the advantage always lies with him. Even if a move does connect, he usually gets to his feet first and performs a counter-hit.

VS GUN JACK

Gun Jack's power and surprising speed can cause problems. However, against a fighter with the reversal ability and sheer power of Jin, he cannot do that much. In particular, the Roundhouse to Triple Spin Kick is very useful, as Jack's lack of speed means he has big problems blocking this move.

VS BRYAN FURY

Wait for Bryan to attack you, then use a reversal move, or better still, one of Jin's power moves—the Demon Scissors and Dragon Punch Combo are particularly nasty! Beware of Bryan's speed, as he can move in and use his strength with consummate ease. This is where Jin's reversal attack is invaluable.

VS KUMA

Kuma is slightly faster than the version in *Tekken* 2 but still presents an easy victory for Jin. Use a combination of power moves and reversals to ensure victory. The only golden rule is not to get too close unless it's necessary, as Kuma's throwing range is formidable.

VS HEIHACHI MISHIMA

Heihachi seems to be even more aggressive than in *Tekken* 2, but he's still very predictable. This makes him an easy target to a Jin player who can use the reversal attack well. Simply wait for Heihachi to make the first move, then reverse the move or avoid it and come back at him with a combo of your own.

VS JULIA CHANG

The computer fighter will try and counterstrike with multi-level attacks—Julia has some of the best high/low maneuvers in *Tekken* 3, so watch out. You must anticipate her chain attacks and block accordingly; if you can do this, you have plenty of counterattacking chances. Next use a combination of Jin's speed and his reversal ability to carry you through.

VS MOKUJIN

Mokujin can mimic the moves of every fighter in the game and change the character he copies each round, so this in effect gives him a different fighting style each time you face him. However, before the round begins, Mokujin performs the taunt of the character he has become. Learn all the taunts and you'll know which Vs strategy to use.

VS PAUL PHOENIX

Paul likes to use his power moves to overwhelm an opponent quickly—the Hammer to Power Punch and Phoenix Smasher can drain up to 30% damage in a single hit. If he moves toward you, you can be pretty sure he'll try and take you out with a sweeping attack. The best way to combat Paul is to use Jin's speed and reversal attacks to counter his power moves. This task is made easier by the fact that most of Paul's power moves take a few seconds to pull off. This should be just enough time for you to see what's coming and perform the reversal.

Cute, spirited, has panda... will travel. This young girl loves amusement and theme parks. Her dream is to build the perfect amusement park in China when she grows up. She is both young and small in stature but Ling is a skilled martial arts expert. Many believe if she were more serious, she could achieve real greatness. Having learned that the Mishima Financial Empire is rich and powerful, she sought out Heihachi (president and CEO) to make her dream of the perfect amusement park a reality. While vacationing in Hong Kong with her family, Ling stowed away on a yacht bearing the name Mishima Financial Empire. Heihachi was not onboard but Mishima's men discovered her soon after the ship left port and Heihachi was informed immediately. Upon his arrival, Heihachi found his men beaten and strewn around the ship as if it was hit by a hurricane. Ling threatened that she would go berserk again if he did not accept her challenge. Roaring with laughter, he promises to build the amusement park of her dreams if she wins the tournament.

STRONGEST MOVE

Here Ling demonstrates the best move she has to offer, the deadly Storming Flower. This move is easily executed and does huge amounts of damage to her opponent. However, it's the sheer speed of the move that makes it so dangerous. When used as a counterattack, the Storming Flower is hard to beat.

To perform a Storming Flower press: ↙ + LP.

GENERAL FIGHTING STRATEGIES

When playing as Ling Xiaoyu there are three basic moves that you must learn. If you perfect them, Ling proves herself as a very strong character.

The Art of Phoenix Stance allows Ling to greatly vary her attacking style. Use this to confuse your opponents.

Ling's speed allows her to use simple kicking attacks.

Firstly, the easy to use Art of Phoenix Stance is low and aggressive. It basically makes all your opponents' high attacks useless, as they'll simply fly over her head, and this leads to countless attacking chances. Another factor is that people think she's vulnerable in this weird stance—not so! When you use the Art of Phoenix, just sit there and wait for your opponent to make a rash move, then capitalize with precision and power.

When in the Art of Phoenix, you're capable of dodging to safety with extreme speed, then throwing your opponents. Simply move into the Art of Phoenix stance then wait for them to move in. When they try an attack, sidestep and throw—it works almost every time. On the downside, using the Phoenix at close range for long periods of time can be dangerous. If your opponent wises up, he or she can use a powerful sweeping attack to cause major damage. Be particularly wary of Eddy Gordo and Hwoarang.

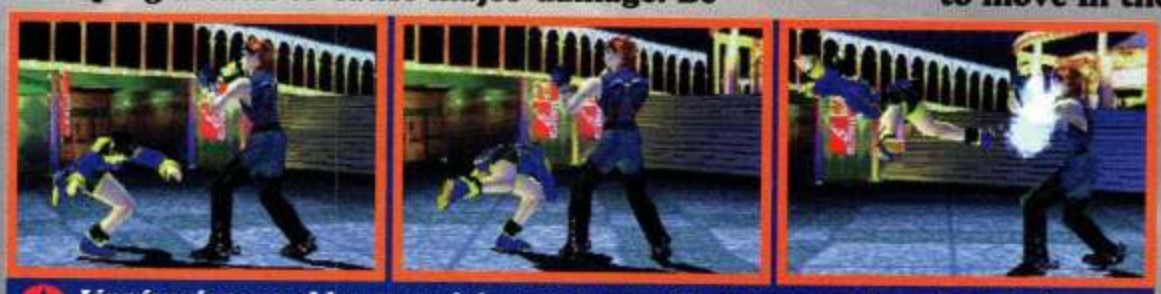
The power and versatility of the Storming Flower is amazing—it's fast, it can counter-hit almost any move, and it pushes your opponent away from you after a hit, which means you can use a shoulder charge to follow up in devastating style. The Storming Flower's priority over other attacks is incredible: It's possible to knock people out of a charging attack with this move; you can even take Hwoarang out of some of his kick combos. The only problem is that it has a huge lag time, should you miss.

When an opponent is in the air, juggle for major damage.

Ling uses the Storming Flower to attack.

The final move that you *must* learn when playing as Ling is the Mistrust attack—a backward hook kick knocks an opponent into the air. As useful as the Storming Flower, it inflicts 15% damage (unblocked) and sets up your opponent for a follow-up move. In order to perform this move, you must have your back turned to your opponent—in other words, you need to be in the Rain Dance position. From here you can perform a couple of punches before you go into the Mistrust to score even more hits and damage!

Ling's excellent speed allows her to dodge around the battle area. If you add this to her impressive arsenal of attacks, you're looking at a character that's tough to beat. You can simply wait for your opponent to move in then dodge to the side and perform one of her lethal counterattacks: The Rain Dance, Storming Flower, Double Fan, a juggle combo, or throw are all perfect examples. This is the skill that sets apart a good *Tekken* 3 player from an average one—if you use the 3-D dodge technique, you give your game a whole new edge and get many more chances to attack.



Ling is using one of her powerful moves to attack her opponent from the Art of Phoenix stance. This move is easy to perform but very difficult to block.

Ling Xiaoyu

STRENGTHS

● Its pretty obvious that Ling Xiaoyu's main strength lies in her speed—in fact she's the fastest character in *Tekken* 3. If you learn how to utilize this speed, you can cause your opponents all sorts of problems. The dodge technique, in particular, is very useful when playing as Ling, so use it whenever you can. With speed like Ling's, you can put even the best *Tekken* character under pressure, and make mincemeat of slower ones.

● You could be forgiven for thinking that a character with amazing speed such as Ling's would suffer in the strength and power departments, but this isn't entirely the case. For example, if you trade hits with someone like Gun Jack, obviously you're going to come off for the worst, but on the whole Ling has some powerful attacks—her combo chains can cause up to 58% damage when used at the correct time. If you can use her speed to get into the correct positions, then her strength to capitalize on it, you have a formidable combination!

● Many of Ling Xiaoyu's attacks can be performed with her back to her opponent, so she's always able to spring an attack when her opponent is least expecting it. Coupled with her speed and power, this makes her one of the best characters in *Tekken* 3.

● Ling's strength lies in close combat—most of her dominating pop-up attacks, ground assaults, and Rain Dance tactics are most effective at this distance. Her speed and ability to dodge around the battle area work well up close, too. The skillful Ling players buzz around in front of their opponents, using surprise attacks whenever opportunity arises. This form of combat is very annoying to the victim and even harder for him or her to oppose.

WEAKNESSES

● While Ling's ability to fight backwards is a strength, it's also her greatest weakness because she can't block from this position. This is particularly dangerous against strong characters like Gun Jack, whose Dark Greeting move will decimate her. If your opponent starts a combo or chain attack while your back is turned, you can't reverse or avoid it. Even if it's breakable, Ling is helpless, as a string attack cannot be broken unless you are facing your assailant.

● Another weakness is Ling Xiaoyu's lack of range. Most of her attacks are very short range—you must be very close to an opponent for them to work properly. If you use them from too far away, you end up leaving yourself in no-man's land and open to a powerful counterattack. Once again this fault is particularly highlighted against characters like Paul Phoenix, Hwoarang, or Heihachi, as their amazing attack power can KO Ling in seconds.

● Ling is ineffective if she's fighting a powerful character at close range when time and energy are short. While she has the speed to get in close and mix it up, playing catch-up in the energy stakes pressurizes the Ling player into performing complicated power moves that can easily go wrong. If this happens, she's wide open to a big counterattack, and against this type of character, this spells doom.

LING XIAOYU VS CPU STRATEGIES

VS EDDY GORDO

Half the time even Eddy Gordo himself probably doesn't know what he's gonna do next, so what chance have you got?! There are only two things to keep in mind: First, 90% of his attacks are going to be low, and second, Ling's Storming Flower can be used to counterattack with power and speed. Concentrate on blocking and counterattacking.

VS YOSHIMITSU

The Art of Phoenix is the key to winning this match. Yoshimitsu uses high kicks and punches throughout the match for big damage, so this low fighting stance proves to be the perfect way to avoid his attacks and start your own. If you've mastered this important part of Ling's fighting style, you'll have no problems.

VS HWOARANG

Hwoarang has many kicking attacks that come at different heights and this makes Ling's life tough. Forget about the Art of Phoenix, as Hwoarang will nail you almost every time. Use Ling's speed and dodging ability to confuse Hwoarang and give yourself a good deal of attacking chances.

VS NINA WILLIAMS

The most important move in this match is probably the Storming Flower, as its power and speed make it the perfect counterattacking weapon against the somewhat predictable fighting style of Nina. You should be able to read her attacks then use sidesteps to avoid them, giving you the chance to use the Storming Flower in the process.

VS FOREST LAW

Forest Law likes to use his speed to set up chain attacks that score big damage if you don't block them. You must be really fast to work out what he's doing, then react. Try sidestepping his attack then fighting back with a combo. If you use a variety of attacks, you'll overpower him.

VS JIN KAZAMA

When he uses his triple spinning kick, block the attack (you cannot dodge it because this move tracks the opponent) then counter with the Raccoon Swing, followed by a Storming Flower. The best thing about this is that Jin uses the spinning kick all the time, giving you lots of opportunities to use this tactic.

VS LING XIAOYU

If Ling goes into her crouching stance (the Art of Phoenix), you need to act quickly, as this is when she's most deadly—as you should know by now! Knock her out of this stance with the Storming Flower or Raccoon Swing. You can follow this with the Mistrust, which can be used to begin a juggle.

VS KING

In addition to basic grappling techniques, King has a huge array of devastating multi-part throws, so you must concentrate on staying outside his throwing range. Wait for King to approach, then as he tries for the throw, sidestep and combo. This match is tough, as Ling's best stance, the Art of Phoenix, is useless.

VS LEI WULONG

You must constantly be on the lookout for Lei's low attacks as he only needs a couple of chances with them to finish you off. He changes his fighting stance quite often, particularly on the high difficulty setting, so if you can learn to recognize which stance is vulnerable at which height, you have lots of attacking opportunities.

VS GUN JACK

Gun Jack has the power to kill Ling in about two hits, so this match basically comes down to a question of whether you can stay out of his throwing range while slowly chipping away at his energy. You must move back and forth, dodging around while you mix up the attack height, to keep Gun Jack guessing.

VS BRYAN FURY

This match can be tough, as Bryan has good speed and the power to make his attacks count. You will have to use the dodging technique to its full potential if you want to win. The other thing that's useful here is Ling's Art of Phoenix, as it renders a great deal of Bryan's attacks useless, because they land high.

VS KUMA

Use Ling's huge speed advantage to dodge in and out of range, using powerful attacks like the Storming Flower to knock Kuma to the floor. If you get too close and stay there too long, Kuma grabs you, and his throws inflict significant damage, so watch out!

VS HEIHACHI MISHIMA

Heihachi's lack of speed makes him a simple foe—just take extreme care to avoid taking hits, as they drain lots of energy. Use Ling's speed to confuse Heihachi, with frequent stance changes and dodging movements. Above all, if you can block his attacks, you'll have no problem in beating him.

VS JULIA CHANG

This is a tough match, as Julia's speed and strength are comparable to Ling's. Use a mixture of the Art of Phoenix stance and her regular fighting stance to confuse your opponent. When Julia tries to use her high/low combo attacks, sidestep her and use a throw or start a juggle combo with the Raccoon Swing.

VS MOKUJIN

Mokujin can mimic the moves of every fighter in the game and changes the character he copies each round, so no real techniques can be given. However, as the bout starts, he performs the taunt of the chosen character, so if he crouches down and hits the ground with his fist, he's mimicking the wrestler King.

VS PAUL PHOENIX

Paul is a tough character because of his excellent attack reversal and the sheer strength of his Phoenix Smasher. Use the Art of Phoenix to neutralize the Phoenix Smasher and give yourself counterattacking opportunities, but not too often, else he'll wise up and use his Hammer Punch. Keep moving and dodging, and use low attacks—he can't reverse them!

Heir to the throne.... He's really King the Second. Raised in King's orphanage, he was 24 years old when the original King was killed. He put on the mask and assumed the role of King's successor, in order to honor his mentor and save the orphanage. The new King had only watched his mentor and really was incapable of fulfilling the legend. Armor King, knowing who killed King, felt an obligation to prepare King the Second for rightful revenge. Four years have passed and King the Second is now a skillful wrestler. Feeling the time is right, Armor King tells his student that Ogre was responsible for King's death. Armor King breaks down in tears as he tells the gruesome story. King the Second now knows his purpose in life.

STRONGEST MOVE

The Deadly Boemerang is King's most powerful attack.

GENERAL FIGHTING STRATEGIES

Here King demonstrates the Suplex move. This throwing attack is easy to perform and inflicts major damage.

Throwing attacks are what makes King tick—he is by far the most versatile of all the characters in this area. When you begin to play as King, immediately develop your throwing skills, as this will help you win matches. However, don't expect to master him quickly—you'll find yourself on the ground quite often at first. As you begin to perfect the button combinations, your game will improve, and before long you should be throwing your foe around like a rag doll.

When you reach this point, you're ready for anything and anybody! Because King's fighting style is based on throws or multi-parts, learning to play him effectively is a tricky business. Start by learning the button combinations for the masses of throwing techniques—unless you know them, King isn't a good character. For this reason, he's only recommended to experienced *Tekken* 3 players. When you understand how the game works, give him a try—when you can time his moves and throws correctly, King is almost unstoppable.

Once again, King demonstrates one of his many throwing attacks. Here he has his enemy in a leg hold.

This is the Shoulder Tackle and can be used to really surprise an opponent. King uses his huge size and weight to smash him or her.

If you're up against an enemy who's prone to crouching, the Shoulder Tackle will come in handy. Try a low kick then go directly into a Shoulder Tackle—even if they try to be clever and duck the initial low attack, the following move will knock them to the ground. Now use one of King's follow-up attacks to cause even more damage. The only drawback is that if your opponent blocks the Shoulder Tackle, you're wide open. Just take care and this move can be a life-saver.

The Ultimate Tackle is an essential move to learn. King charges toward his opponents, taking them to the ground, from which point he can do one of three things: deliver a sequence of punches, the Leg Cross Hold, or Cross Arm Lock (or even a combination of the two). If you perform it as your opponent is getting to his or her feet and he or she doesn't block immediately, you can take him or her down again and go back on the offensive. The only downside is that Nina, Paul, and Jin can reverse this maneuver, so take a little extra care when fighting them.

The Disgraceful Kick has major range; it can be used to set up a throw sequence.

If you're playing a defensive game, King's Disgraceful Kick is a must. When your enemy comes at you, reply with a quick Disgraceful Kick. If you score a hit, tap the button again for a second hit. This tactic works well on all fighters, but it's particularly effective against slower opponents.

His superb throwing means King is a threat from anywhere.

King

STRENGTHS

● King is a very powerful fighter who can finish an opponent in a hurry, should he need to. Moves like the Exploder and Frankensteiner are extremely powerful, inflicting lots of damage and proving difficult to block—the Frankensteiner is particularly hard to avoid. Learn these moves and you'll have a winning chance, no matter how bad things look.

● King is a deceptively fast character who surprises many opponents with the rate at which he moves around the battle area. You can use this speed to score a couple of easy hits at the start of a match, then as the bout continues, apply it to move in on your enemy and use one of King's many throwing attacks. This combination of speed and throwing ability is unrivaled.

● Because of his many and varied techniques, King is the hardest character to escape from, once he has started a sequence of throws. Use this to your advantage. Always vary your throwing combinations—your foe will have no idea what's coming next and little chance of escaping the chain of moves.

● King has got one of the best kick reversals in *Tekken* 3, therefore you should use it whenever possible. An opponent cannot escape it once it has been used, making it invaluable against characters who have many low kicking attacks, such as Law and Lei.

WEAKNESSES

● Because of his wrestling background, King doesn't have many basic punching and kicking attacks, so unless you know how to use his throwing techniques, you soon hit trouble. If you try to play King like you would a normal character, you give yourself no chance at all. King is a wrestler, so if you want to control him well, you must learn to play like a wrestler. This means using all of his throwing attacks to maximum effect.

● King's 10-string combo attacks are very slow, and therefore very easy for an opponent to block or, worse still, reverse. This makes King's string attacks almost useless—a major failing.

● King has a real problem getting out of pressure situations. This is particularly evident when you fight a character who likes to constantly "chip away" at an opponent—Lei, Yoshimitsu, Nina, and Ling are all examples. Due to the fact that King's regular attacks are slow, it's very hard to get this type of opponent out of your face once he or she gets started.

● When you're playing as King, you need to be close to your opponent in order to make his throwing and multi-part strengths pay. It requires excellent skill on the part of the King player to get around this shortcoming. Until you are an expert, getting near enough to use your big moves is a real headache.

KEY TO MOVES

#1: First hit must counter-hit (CH) in order to perform 4-5 Ali Kicks. First hit does 17 on counter-hit (CH).
#1b: Follow up from third hit of Ultimate Punches. Paul, Nina, King, Jin can reverse with LP + RP, RP, RP, RP, RP and deal 10 damage to King.
#2: Cannot be chickened (double reversed).
#2b: Follow up from third hit of Ultimate Punches. Nina and King can reverse with LP + RP, LP, LP, LP, LP and deal 10 damage to King.
#3: Unblockable, but can be crouched under.
#3b: Requires perfect timing.
#4: Hits H up close, hits L from a distance.
#4b: LP escapes if grabbed from left side, RP escapes if grabbed from right side.
#5b: Can be done only when opponent is stunned.
#6b: Inescapable if grabbed from behind.
#7b: If throw connects from side, Cannonball will be the first throw.
#8b: Escape with LP if thrown with (A), escape with RP if thrown with (B).
HC: Hits correctly.
CD: Takes off correct amount of damage.
c-throw: Crouch throw. This is when your opponent is in a crouch position.
*: Depends on throw initiated from SS + RP + RK. 28 if R.F.N. 18 if Cannonball.

KING VS CPU STRATEGIES

VS EDDY GORDO

This is the hardest fight of all for King—Eddy's low attacking style means you cannot afford to get anywhere near him! Let Eddy do his usual wild thing, then use a Disgraceful Kick to knock him down. King's throws are almost useless; you must rely on blocking skills and basic counterattacks.

VS YOSHIMITSU

Yoshimitsu should cause no problems at all. He uses his spinning kicks with amazing regularity, so simply avoid these by ducking, then during the lag time that he suffers while recovering, hurt him with your favorite chain throw.

VS HWOARANG

Unless you can block or, better still, evade them, Hwoarang's kicking combos cause problems. He rarely attacks with a single kick, so if you don't block the first one, you're hit with a string of follow-up kicks. Provided you can defuse or avoid these attacks, you have lots of counterattack chances, so make them count with chain throws.

VS NINA WILLIAMS

Speedy Nina rushes toward King at most opportunities, which is bad news when she attacks because you'll be prevented from starting a throw or chain of throws. You must dictate the speed and direction of the match by using a wide selection of throwing attacks and regular punches and kicks.

VS FOREST LAW

Law likes to wait for you to move in for a throw, then before you can start the sequence, he launches a lightning-fast combo—and once he starts, there's no stopping him! To combat this, move in on him, then at the last moment sidestep to avoid his attack and put yourself in the perfect position for a throw.

VS JIN KAZAMA

Play a defensive game, then counterattack with chain throws. If you mix up the order in which you use throws, it's almost impossible for him to escape, opening the door to your big damage combos. Jin's excellent speed and ability to mix high/low attacks make this fight harder, but blocking these moves gives you the chance to use power throws.

VS LING XIAOYU

Ling's speed gives her the edge in this match, and she plays a close game, so keep your distance. Use the Deadly Boomerang to attack an oncoming Ling—even if she tries to evade it, you'll hit her. If Ling tries to use her Art of Phoenix stance, knock her down with a Stomach Smash and follow up with a ground attack.

VS KING

Fighting yourself isn't easy, as the CPU character can pull off complicated sequences quickly and in tight situations. The key to victory is to anticipate what he'll do and act accordingly. Use throwing techniques to overpower him—never sit back and try to counterattack. A throw cannot be blocked, the counterattacking chance will never come, and you'll be thrown to the ground.

VS LEI WULONG

Because of his Play Dead techniques, it's unwise to close in on Lei. Instead, try and stay about four steps away from him at all times to give you the distance and time to deal with his Play Dead attacks (the Stagger Kick works well). Remain close enough to move in and use a throw, should he make a mistake.

VS GUN JACK

King has the speed advantage, but because both characters have a vast array of throws, the fight usually boils down to "He who dares, wins!" If you seize the initiative and move in using your superior speed, nine times out of ten you'll make the throw before Jack does. Once you have started the throw, continue the chain for greater damage.

VS BRYAN FURY

Bryan has so many aspects to his game, you have to be in top form to beat him. This task is made much harder by the fact that King doesn't have a punch reversal, where Bryan has the strongest. Your dodging ability has to be excellent—if you can evade him, you'll have opportunities to let King's throwing superiority shine through.

VS KUMA

As with Gun Jack, be brave and use your throwing attacks before Kuma attempts his own. King's speed gives him the advantage in this area of the fight, and if you follow up the initial grapple with chain throws, you'll beat the bear in no time.

VS HEIHACHI MISHIMA

While Heihachi has great strength and all-around ability, he's also one of the slower characters. Coupled with the fact that he has no real answer to King's vast array of throwing moves, the advantage is certainly with the skilled King player. However, your blocking must be excellent, as Heihachi is devastating when on the attack.

VS JULIA CHANG

This is a tough match. Get too close and you're asking to be combo'ed, and with Julia's high/low attack variation, this is a real problem. Your blocking skills are crucial if you want to win this match, as they can give you the chances to counterattack with chain throwing attacks and power moves.

VS MOKUJIN

At the start of the round, watch Mokujin carefully. He performs a characteristic taunt or maneuver, giving you a clue as to whose moves he'll use in the ensuing battle. Play as each character until these signs are memorized, then when you fight Mokujin, use the Vs strategy that matches the taunt.

VS PAUL PHOENIX

Paul's power moves have huge set-up times, and when they're blocked he has a record lag of a second or so. A skilled King player can sidestep Paul's attacks then begin a throwing chain. If you can master this strategy, your battles with Paul should be a piece of cake.

Supercop never rests.... Bruce Irvin took him to the brink of defeat in *Tekken* 2 but Lei managed to come away victorious. Bruce's flight home was then reported crashed, killing all passengers aboard. It was rumored that Kazuya's corps was involved, as a means of silencing Bruce. Lei's investigation and intuition led him to believe the accident was staged, and he doubts that Bruce is really dead. After the last tournament, Lei returned to his job as an investigator of international crime. Though 19 years have passed, nobody believes he is 45. Known as Supercop, he's feared internationally by even the most powerful of crime organizations. Falling within his jurisdiction are the strange disappearances of prominent martial artists. During these investigations, Lei was visited by the head man of the MFE, Heihachi Mishima. He asked Lei to join the "King of Iron Fist Tournament 3." Why Heihachi would seek him out for a mere tournament was beyond Lei. A believer in fate, Lei feels there's a reason for this meeting.

STRONGEST MOVE

Lei's most potent attack is the Booby Trap. Lei fakes his opponents out from behind, and gives them a powerful punch. This move causes 50% damage.

GENERAL FIGHTING STRATEGIES

Lei has a great punch combo called the Rushing Snake that can put an opponent under pressure from the moment a fight starts. This is a favored move for a number of reasons: It's very easy to perform (you only need repeated taps of the left kick button), causes lots of damage (around 50%, if all of the hits connect fully), and you can chain the Rattlesnake move onto the end, knocking your opponent into the air. An awesome chain of moves that are simple to perform, even under pressure.

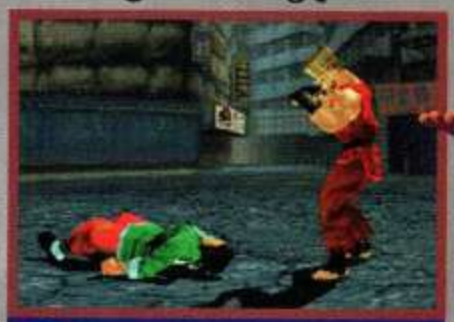
Using Lei's "animal" arts is the key to mastering this difficult character. Here he shows off the Art of Snake.

The Rave Spin hits an enemy twice—first low, then high.

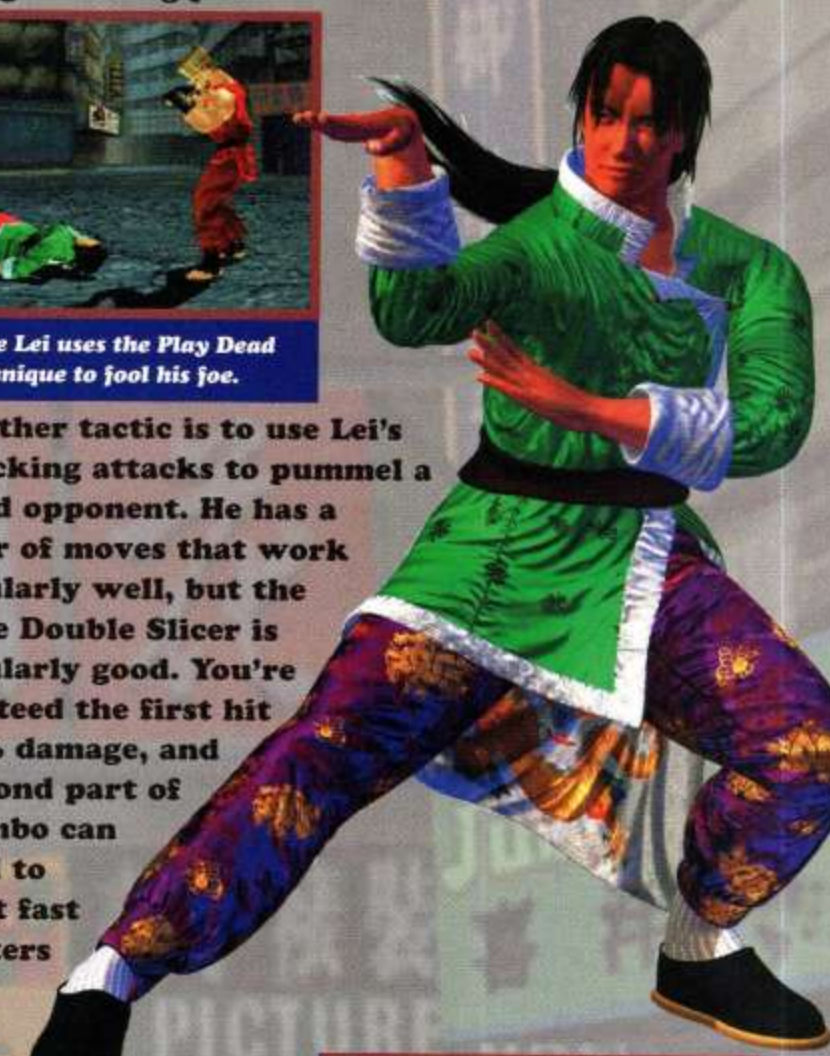
The Rave Spin is a classic Lei technique that can be used in many different ways, but there's an element of risk. The problem is that it can be counterattacked, should your opponent block the first hit. Used sparingly, however, it helps you win the match.

The Low Parry is one of the most under-used moves in Lei's repertoire, because if you miss, you leave yourself wide open to a counterattack or juggle combo. Despite this risk, the Low Parry is very useful. If you start a match by blocking and try to get used to the way your foe attacks, you may be able to use the Low Parry. Follow this move with a simple throw or the Razor Rush—here the first two hits are guaranteed, which means big damage!

Lei's Leaping Double Slicer is another risky move; because it takes a long time to execute, it's easily countered by a quick-thinking foe. However, it's extremely powerful and difficult to block—even if it *is* blocked, your foe is stunned for a few seconds. This gives you the opportunity to follow up with a number of different attacks, so your opponent has to guess what you'll do next. For example, you can use a simple throw followed by a ground attack, uppercut juggle combo, then Rave Spin. All of these have different attack levels and give Lei many choices from this single starting point.



Here Lei uses the Play Dead technique to fool his foe.



Another tactic is to use Lei's low kicking attacks to pummel a downed opponent. He has a number of moves that work particularly well, but the Reverse Double Slicer is particularly good. You're guaranteed the first hit for 10% damage, and the second part of the combo can be used to prevent fast characters from getting up too quickly. Another excellent ground attack is the Falling Tree. It's really quick and easy to perform, and scores 15% damage.

This Hook Punch is easy to perform and very quick.

The Hook Punch is an extremely useful move that adds variation to your play and can be used to get close to your opponent. With your back turned, you can surprise them with a Rave Spin, Spinning Back Blow, or even a throw. All of these moves work particularly well against opponents who have a mid/high block stance.

Lei Wulong

STRENGTHS

● The Razor Rush combo is a barrage of rushing punches followed by a trip kick. Even if an opponent is smart enough to block the initial run of punches, they're unlikely to block the kick. As always, the key is not to overuse this combo, as your opponent will work out what you're doing and knock you out of the rushing punches. A good way to vary this attack is to begin while your foe is recovering from a missed attack or getting up from a knock-down.

● The key to playing Lei Wulong effectively is to master his ability to "Play Dead" and the attacks that go with it. Lei can drop to the floor then perform a series of moves from this position, each causing significant damage and confusing your foe into the bargain. You must know when to use the Play Dead move and when not to, as relying on this technique leaves you open to counterattacks. Provided you use it wisely, Play Dead is the most important aspect of Lei's game and makes him a strong character.

● Lei can turn his back to his enemy. While this may sound like suicide, it proves to be a big plus. To start with, it catches your opponent off guard, and it's also the starting point for a variety of moves, the key to beating better players. The secret is to mix up the way you use this type of attack to gain the maximum effect.

● To round out his balanced and varied attacking arsenal, Lei has an excellent array of kicking attacks. All of them are easy to perform, cause major damage, and look really cool! A good example is the Reverse Double Slicer combo. It's perfomed with your back toward your opponent. Hold down for a full crouch, then tap RK twice while holding down. It causes about 15% damage and looks great.

● Lei's unblockable move is the excellent Phoenix Strike. It's a flying crescent kick that inflicts massive damage and is easy to use. Try using the Double Foot Stomp throw to knock your opponents backward, setting them up for the unblockable attack, then as they approach, use the Phoenix Strike to give them a major wake-up call—devastating! Also, if you knock your foe to the ground, you can start to perform the unblockable from a few steps away. This should strike your opponent as he or she gets to their feet, and saps masses of energy.

WEAKNESSES

● One of Lei Wulong's biggest weaknesses is that his string attacks are significantly slower than many characters. This means that faster opponents like Nina, Paul, and Ling can easily break or evade his attempts to combo them.

● The sheer complexity of many of his attacking styles makes Lei extremely difficult to control effectively. You must know when it's best to use kicking attacks, when to turn your back on a foe, when to Play Dead... the list seems to go on and on! Learning how to play Lei from scratch takes time, effort, and practice, and this will discourage some people. It takes twice as long to get to a level of competence comparable to the average Paul or Nina player, so despite his varied fighting options, Lei may not be worth the effort—there are better characters to choose!

● While the different fighting stances of Lei's Animal Arts give him lots of variation, it takes time to get accustomed to them. Worse, you lose the stance when he takes a hit—you can spend valuable seconds getting into a new stance, only to be knocked to the floor.

This can be extremely frustrating, and novice players in particular seem to spend half of their rounds trying to use these stances rather than getting down to the business of fighting!

● Lei has no attack reversal or mid-thrust blocking moves, and this can be a real problem when facing an aggressive opponent. If they know you're capable of reversing their attack, enemies aren't eager to come toward you. Unfortunately, when fighting Lei, they can attack pretty much as they wish, with no fear of being reversed.

KEY TO MOVES

#1: Can only be started on a blocking opponent. If final hit is blocked, Lei recovers BK.
#1b: If Life Gain is initiated, amount of life added to Lei's energy bar is subtracted from the damage of throw.
#2: Holding ↑ or ↓ immediately after first hit will result in SNS.
#3: First hit recovers crouching (RC).
#4: If Slide Kick is blocked, Lei recovers in KND. If Slide Kick connects, Lei recovers in PLD.
#5: If Crane's Bill is blocked, Lei recovers BK.
#6: If Panther Paw is blocked, can link directly into Defense Breaker.
#7: Holding back after Panther Tail results in Phoenix Illusion.
#8: Holding forward after the first or second hit results in Dragon Stance, holding forward after third hit results in Panther Stance.
#9: Can link directly into Phoenix Strike.

HC: Hits correctly.
CD: Takes off correct amount of damage.
SSR: Side Step Right.
CRS: Crane Stance.
TGS: Tiger Stance.
PNS: Panther Stance.
DRG: Dragon Stance.
SNS: Snake Stance.
DRS: Drunken Stance.
PHS: Phoenix Illusion.
SSL: Side Step Left.

LEI VS CPU STRATEGIES

VS EDDY GORDO

Keep your distance from Eddy Gordo; if you get too close, you're going to be in real trouble. It's best not to use Lei's Play Dead moves—Eddy has so many low attacks, doing this is playing into his hands. Instead, make good use of your low combo-breaker, as he uses a low attack almost every time.

VS YOSHIMITSU

Watch out for Yoshimitu's sword swipe. Other than the obvious power of the move, it can score damage while you're playing dead, making it extremely dangerous. Use Lei's Low Parry against his multiple spinning low kicks—this is one of Yoshimitsu's favorite maneuvers and reversing it gives a big advantage.

VS HWOARANG

Hwoarang seems to have problems attacking you while in the Play Dead position, so use this aspect of Lei's game to maximum effect. Don't forget that his Low Parry can be used to break Hwoarang's low kicking attacks—just wait for the low attack of his combo, then use the breaker. Also, look out for his Dynamite Heel.

VS NINA WILLIAMS

Nina is a really difficult opponent for Lei so you'll have to work hard. She overuses the Geyser Cannon Combo—this is where you can use Lei's Low Parry to maximum effect. Nina uses reversal attacks regularly, particularly on higher difficulty settings, so don't try too many high level attacks; instead, use Lei's many low sweeping attacks.

VS FOREST LAW

Law favors the Dragon Tail and Rainbow Kicks, both of which are useless while you're playing dead, so use one of the powerful attacks from this position to punish him big time! Use Lei's low combo breaker against Law's Dragon Tail—you must have good anticipation, but the damage you inflict more than makes up for the risk.

VS JIN KAZAMA

Jin is an excellent character, so he can cause major problems. Jin likes to use his Triple Spinning Kick regularly and this move can bring about real damage—use Lei's Low Parry to reverse it. As with your battle against Nina, use plenty of low attacks, as they render Jin's dangerous reversal move useless.

VS LING XIAOYU

Here is another tricky character, due to her speed. Use the Play Dead technique very sparingly, as she'll attack with her backflip moves while you're on the ground. If Ling tries to use her Phoenix stance, always take full advantage and nail her quickly—use the Reverse Double Slicer combo or even the unblockable attack, but you must be fast.

VS KING

Use low attacks to take King out before he gets close enough to use ground throws. Lei's Low Parry move was made to reverse his Stagger Kick. The Low Parry also reverses most of King's 10-string attacks, because many include an early low kick. Don't use high kicking attacks too often, or King will reverse them.

VS LEI WULONG

A tough mirror match, usually because the CPU pulls off moves so fast, only experts can keep up! If he starts to Play Dead, hit him with a Reverse Double Slicer combo or Falling Tree attack—both are fast, powerful, and easy to do. If he attempts a 10-string, wait until the third hit then reverse it with your Low Parry.

VS GUN JACK

Stay out of Gun Jack's throwing range or the match will soon be over—for example, his Piledriver inflicts a staggering 58% damage. The Reverse Double Slicer, Rave Spin, or even the Clean Sweep work well against the slow-moving Gun Jack, as these low kicking attacks are simply too fast for him to cope with.

VS BRYAN FURY

Mix the style and height of attack every time you advance. Bryan has no reversal, so if you vary the way you attack him, there's little he can do about it. Use moves like the Rave Spin, Spring Kick, or even a sidestep quickly followed by a Snakebite combo.

VS KUMA

Approach this in the same way as the bout against Gun Jack: Stay out of Kuma's throwing range and use Lei's powerful and varied attacking style to confuse the bear. Always take advantage when you knock him to the floor by using a pounce attack or, better still, the Falling Tree move.

VS HEIHACHI MISHIMA

The key here is to mix up your tactics—if you use just one style of attack, Heihachi will hurt you with powerful counterstrikes. The speed and ferocity of his Spinning Demon can cause big problems. All you can do is block then try a counterattack when the danger has passed. Use your speed to take full advantage of the chances you get.

VS JULIA CHANG

Using Play Dead is useful and should be a part of your overall strategy, but don't overuse it or Julia will begin to counterattack. Julia has a number of good chain attacks that she uses often. Nearly all of them end in a low kick, so be ready with a well timed block or even a reversal.

VS MOKUJIN

This versatile hunk of wood impersonates other characters, so no advice can be given for Mokujin himself. However, as the bout starts he performs the taunt of the character he's imitating, so if he walks toward you with his hands behind his back, he's Bryan Fury. Read the appropriate character's Vs section then fight on!

VS PAUL PHOENIX

Lei's High/Mid Parry from Tiger Stance move really comes into its own against the heavy-hitting Paul Phoenix. Use it to reverse Paul's favorite attacks—the Gut Buster, Phoenix Smasher, and Power Punch. When Paul tries to use his Power Punch attack, try a quick sidestep to avoid it then retaliate with a combo or throw.

Jack-2 is reborn.... When Jane, now a physicist, was eight years old, she was rescued from a bacteriological war by the Russian military robot Jack-2. However, Jack-2 was later destroyed by a satellite weapon as Jane, still a young girl, watched in horror. Jane, now 27, could not forget the nightmare of Jack-2 having collapsed beside her. She spent 10 years restoring Jack-2 to 90% functionality, but it seemed to have lost the humane characteristics that set it apart from Jack-1. Jane worked hard analyzing the program in order to return to Jack-2 the gentle soul which had saved her life. Through detailed analysis, she found that most of Jack-2's programming was created by Mishima Heavy Industry, one of the subsidiaries of the Mishima Financial Empire. Moreover, she discovered a hidden program... Project Gun Jack. It laid the groundwork for a new weapon, a pivot gun. In order to restore Jack-2 completely, Jane had to approach Mishima Financial Empire and solve the mystery of the project. She quickly installed the hidden program and brought the newly-dubbed Gun Jack to the Mishima Financial Empire.

STRONGEST MOVE

Dark Greeting: This is Gun Jack's unblockable move and its sheer power makes it one of his best. The Dark Greeting is easy to perform and extremely powerful—it can kill an opponent in two hits!

GENERAL FIGHTING STRATEGIES

The ability to predict and then block opponents' attacks is the most important factor when playing as Gun Jack. Put simply, if you cannot block their attacks, you'll never get a chance to utilize Jack's immense power. To do this, you must know and understand how the other fighters attack and the best way to stop them. This is probably the hardest thing to do in *Tekken* 3, so you could say that Gun Jack is a character for expert players only!

Blocking skills are essential when fighting fast characters.

If you want to control him effectively, it's seriously recommended that you practice your blocking skills, honing them until they're near perfect. An excellent way to do this is to let the computer attack you in practice mode. As your foe continues their assault, you should gradually get used to how they attack, and slowly begin to anticipate attacks. When you get to this point, you're ready to start playing Gun Jack in earnest!

Once your blocking moves have made an opening, use Gun Jack's immense power to cause major damage.

Power is the main feature of Jack's fighting style, and learning how and more importantly when to use this strength is crucial. When played correctly, Jack can destroy an opponent very quickly—in some cases two attacks can drain an entire energy bar. However, opportunities to perform these attacks are few and far between, and this is why you must take every chance you get and drive the power advantage home.

Gun Jack's Windmill Punches can be used to counterattack after an opponent has been blocked. This deadly string of attacks see Gun Jack swinging his huge metal arms around like windmill sails as he moves toward his opponent. The best thing about this move is that you can chain four of them together by continuing to tap the punch buttons. It's certainly worth using all four attacks in the sequence, as the final hit inflicts large amounts of damage (30% if all hits connect) and even stuns an opponent, should he or she manage to block it! Beware, the final swing also has a long recovery time that allows a quick-thinking opponent to counterattack.

Gun Jack's Windmill Punches: this move is fast, powerful, and altogether deadly!

The Pile Driver throw is Gun Jack's most effective "front" throw, for a number of reasons. First off, it's incredibly easy to perform, which makes it great to use even when you're under pressure in a close match. Secondly and more importantly, it inflicts a massive 58% damage! Finally, you can easily follow up with another move to inflict even more damage.

Gun Jack uses the Pile Driver to devastate his helpless opponent.

The Cossack Dance can surprise an opponent and cause big damage.

Gun Jack's Cossack Dance combo is a strange-looking sequence that is quite useful but limited by its relatively short range. However, if used sparingly, the sheer surprise factor can catch an opponent napping! Opponents tend to underestimate how many kicks you can chain together and their guard may drop toward the end of the combo, so it's worth using all of the potential four hits.

Because of the speed restriction you face when playing as Gun Jack, you must know the attack range of the moves you intend to use; fail to do so and you're asking to be KO'd. As a rule, never start a combo if you're so far away from your opponent that the third hit in the chain won't connect. Bear this in mind and your enemies will have a much tougher time stopping your attack chain.

Gun Jack

STRENGTHS

● Many of Gun Jack's moves inflict more than 50% damage, which is obviously a huge advantage. In addition, he has a couple of combo attacks that can cause anything up to a massive 90% damage. If you can control this immense power, Gun Jack is extremely useful. He's more than capable of taking opponents out in five seconds—if they make just one mistake, the match can be over!

● Gun Jack has a massive array of attacking moves, giving him plenty of options. He's difficult to predict and even harder to counterattack. When things get tough, use this advantage by never using the same move twice in a row. You must use his moves list to maximum effect to make up for his lack of speed.

● When you have knocked an opponent to the floor, take full advantage and make the chance pay—with the power of Gun Jack, this could spell the end for your enemy! Because of Jack's strength, most attacks result in a knock-down, so take the opportunity to attack your grounded foe with a regular ground strike, or even the Body Press, which inflicts much more damage and looks cool!

● Gun Jack can throw an opponent from what appears to be an impossible range. He has the longest reach in *Tekken* 3, even greater than Kuma's. If your foe moves toward you, use one of Jack's many throwing attacks to punish him. He has literally tons of throws, so there's plenty of variation, and this is the key. Vary the throws used or an opponent will know what's coming and do something about it. Mix things up and keep 'em guessing!

WEAKNESSES

● Speed, or the lack of it, is the biggest problem you're going to come up against when playing as Gun Jack. It's impossible to move around the battle area quickly, and unless you know how to play around this shortcoming, you'll find Gun Jack extremely frustrating. You need to think ahead and get into good positions early. This is as hard as it sounds, so practice is essential.

● Gun Jack doesn't have a reversal move of any kind, and in a game where this type of move often makes a major difference, you can imagine the difficulties it causes. As with his slow speed, you must adapt your playing style to overcome this problem. This is why it's vital to know how to deal with the other fighters—Jack's shortcomings mean you can't just hope for a good result; you must know what you're doing at all times.

● Gun Jack's lack of speed renders some of his attacks almost useless. For example, while the Sit Punches sequence has a surprise factor, a quick-thinking foe can back out of range then pummel the helpless Jack before he can do anything about it! You need sound judgment to select your moves—just because a move is in Gun Jack's arsenal doesn't mean that it's useful in a battle situation. You must recognize which moves are useful and which will cause more problems than they're worth.

GUN JACK VS CPU STRATEGIES

VS EDDY GORDO

Avoid close combat—while this is usually Gun Jack's strength; it's simply asking for trouble against the unpredictable Eddy. Keep your distance and wait for Eddy to attack, then retaliate with a power move or even a short combo. If timed correctly it connects as a counterstrike, inflicting greater damage.

VS YOSHIMITSU

Always be on the lookout for his kicking combinations—they're deadly, causing major damage. It's possible for Gun Jack to duck these attacks then retaliate with a power move of his own—and when you have Jack's power, you only need a couple of chances like that to win the match!

VS HWOARANG

Hwoarang is the best kicking opponent and the sheer speed at which he can attack causes problems. Blocking is very important—if you fail to block the first kick, Hwoarang will probably continue with more, resulting in much damage. If you can block well, Gun Jack can drive home his power advantage when you retaliate.

VS NINA WILLIAMS

Now this is what you call a challenge! Nina is a fast character who varies the height of her attacks. You must learn to read her moves quickly then block and counterattack accordingly. Beating Nina any time after the fifth stage is very difficult when you're controlling Gun Jack.

VS FOREST LAW

Law's speed and high/low attacking patterns are problematic, particularly against the slow Gun Jack. However, you should be able to pull off a win relatively easily, because Law tends to rely on a small group of similar chain attacks, so it's easy to work out what's coming, then act accordingly. Just make sure you take all attacking opportunities!

VS JIN KAZAMA

If you're a master at blocking, keep your distance, block, and counter; this will enable you to chip away at Jin's health. If you're still getting the hang of Gun Jack, get in close and use those powerful attacks the robot is famous for, before Jin has the chance to build up a lethal combo.

VS LING XIAOYU

This match requires supreme effort, as the odds are heavily stacked against you. Ling has such speed that unless you know how to control the match from the outset, it isn't going to last long. Take advantage of every opening you get—and the only way to create these chances is to have rock-solid blocking skills.

VS KING

This match is probably the most difficult. Gun Jack's main strength lies in close-range power moves, but this style plays right into the hands of the champion wrestler! Change your fighting tactics and rely on short combo attacks and power moves that you can perform from a safe distance—the unblockable Giant Foot Stomp is a good example.

VS LEI WULONG

The longer this match goes on, the more chance there is of Lei's weird fighting style confusing you. Use Gun Jack's immense power to take him out quickly—try the Rushing Uppercut and Windmill Punches. If Lei tries to use his Play Dead move, quickly perform the Giant Foot Stomp to give him the ultimate surprise!

VS GUN JACK

Your mirror match is decided by one crucial factor—your ability to vary your attacks and confuse your opponent. Use a mixture of throwing techniques and power moves. If you can back this up with solid blocking, you're in a good position to win the match.

VS BRYAN FURY

Bryan has all the elements needed to pummel Gun Jack and he certainly knows how to use them! Your blocking ability is tested to the absolute maximum and you have to regularly mix the level at which you attack. Try throwing in things like the Cossack Dance occasionally, as its low attack level will surprise your foe.

VS KUMA

This match should be approached in a similar same way as your mirror match. Stay out of Kuma's throwing range and use you own power moves and throws to beat the bear at his own game. Gun Jack has a marginal advantage when it comes to throwing range, so don't be afraid.

VS HEIHACHI MISHIMA

While Heihachi's massive strength and all-around ability mean that this match isn't exactly easy, the fact he's one of the slower characters and has no reversal move means that for once it's not just a case of blocking and counterattacking. If you pick your moments, you can add a few chain combos into the fight.

VS JULIA CHANG

This represents another tough match-up. Julia Chang, like Nina, has amazing speed and many high/low attacks that cause big problems for the cumbersome robot. Once again your blocking skills are put under the spotlight—it's essential that you consistently block Julia's kicks to give yourself counterattacking opportunities.

VS MOKUJIN

Mokujin's moves and tactics depend upon the character he's imitating. He gives you a clue at the start of the round: If he's holding a sword, obviously he's become Yoshimitsu, but the characteristic taunt or initial movement of other characters is as much a giveaway, if you can recognize them.

VS PAUL PHOENIX

Paul is a tough character but once you learn the timing of his attacks, blocking him on a regular basis is relatively easy. He mainly uses the Hammer Fist, Hammer to Power Punch, and Shredder, so if you can stop these then counter with some of Gun Jack's power moves—the Megaton Blast, for example—you'll win easily.

Part man, part cop, all zombie.... Bryan Fury, an officer in the International Police Organization, was killed in a shoot-out in Hong Kong. Bryan's corpse was transported to the laboratory of a man named Dr. Abel. This 88-year-old scientist was fairly famous in the underground society, but his findings were often preceded by Dr. Boskonovitch's. However, at last, he came to the last step of completing his master project... the Cyborg Army. Dr. Abel thought that a perfect cyborg must have mechanics built by his rival, Dr. Boskonovitch, so he re-animated Fury's body and sent him off to collect this data. In his former life Bryan was known as a skillful detective, but on the other side, he was always followed by dark rumors. Investigating the Hong Kong drug trade, Lei Wulong discovered that Fury had connections with drug dealers. Bryan sneaks into the "King of Iron Fist Tournament," targeting Yoshimitsu, who has strong ties with Boskonovitch.

STRONGEST MOVE

Here Bryan demonstrates what are easily his most powerful moves: the Gravity Blow and Meteor Smash are unblockable and offer a variation in speed and power. Mix these moves up to give your opponent major headaches.

GENERAL FIGHTING STRATEGIES

This is the deadly Mach Breaker, a fast punching attack that causes big-time damage. This move is particularly useful when used as a counterattack.

The Mach Breaker is Bryan Fury's best attack, bar none. It's fast, it does decent damage, and it's not easily reversible. It's so fast, it can be used to break some characters' combo attacks, and its counterstrike power is amazing. It's not perfect, though: if your opponent ducks the attack as you perform it, it leaves you vulnerable to a nasty counterattack. Also, when playing against a character who has an attack reversal, the Mach Breaker can be reversed because it's a high-level attack. For these two reasons, it's best to use it as a counterattack; that way it cannot be blocked or reversed. Overall, the Mach Breaker is a deadly move that can often win you a close match.

The ability to perform a sidestep attack is very useful. Here Bryan is about to attack a helpless Paul with a deadly Headhunter!

The Headhunter, Cheap Trick, and Shell Shock are excellent sidestepping moves that work very well as surprise attacks. You can mix them up to confuse your enemy so he or she doesn't know what to expect. All of them appear to be a simple sidestep, but are in fact attacks to either the left or right side. The Headhunter does the most damage, but the Cheap Trick is the sneakiest of the three. The Shell Shock does the least damage of the three, but it helps to keep your enemy off-guard.

The Snake Edge is a good, fast low attack, but its strength is in what you do after the move: the Snake Edge provides the perfect set up for a devastating combo. As with all moves, you don't want to rely on this one too heavily because it's not difficult to block when you know it's coming. But because of its speed, most enemies won't realize what you're doing until it's far too late.

Because a huge proportion of Bryan's hits are high or mid-height, use the Snake Edge occaisionally to surprise an opponent. This move is basically Bryan's low-level arsenal, so use it wisely.

The Snake Edge can really hurt.

The Slash Kick is a great all-around move. It does more damage than even the Mach Breaker, it's very fast, and it's very easy to execute. When it's successful, it launches your opponent far from you. Of course, this makes you unable to follow up with a combo, but this has its advantages as well: When the move is not successful, it still pushes your opponents a few feet away, making them unable to counterattack. This move is good when you need a breather or when you need a simple, massive attack to finish a match.

Bryan Fury

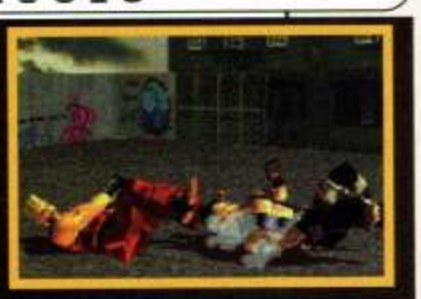
STRENGTHS

● Bryan's biggest strength is easily his amazing power—he's one of the most powerful fighters, and coupled with his good speed, he's also one of the best all-around characters. Maneuvers like the Hands of Doom, Lair's Dance, and High Kick to Rush cause up to 21% damage.

● Bryan's unblockable move, the Meteor Smash, is by far the second quickest unblockable in *Tekken* 3. This means that it can be used in normal play without fear of counterattack while it powers up, and it inflicts a massive 60% damage when it scores a clean hit. As part of Bryan's already powerful array of attacks, it makes him one of the most feared fighters. The Gravity Blow, which is the quickest unblockable in the game, is Bryan's second unblockable, and while this isn't anywhere near as good as the Meteor Smash, it's quite useful, due to the speed at which it can be performed. The Gravity Blow causes 21% damage when it scores a clean hit.

● Bryan's three sidestepping moves add another dimension to his fighting style. The Headhunter and Shell Shock cause 33% and 26% damage respectively and are very difficult to block, particularly if you mix them up well. The Cheap Trick (28% damage) is the most useful of all because it can be followed up to create a two-hit combo hitting high then at medium height in rapid succession. It's almost impossible to block effectively—if the first attack doesn't get them, the second is almost guaranteed to hit home. Very few opponents have the skill and speed to block both. If you use Bryan's sidestepping abilities to their potential, you add a whole new level to your arsenal.

WEAKNESSES



● Bryan's main weakness is that he has few low level attacks. From all of his attacking moves, only around five of them strike at a low height, and this restricts his attack variation. The best low attack he has is the Snake Edge, which inflicts 17% damage and knocks an opponent to the ground for a follow up move. As a Bryan player, you must almost solely rely on his high- and mid-level attacks. Against characters like Jin, Nina, and Paul, who all have attack reversals, this can be a major headache.

● Bryan's 10-string attack is the worst in *Tekken* 3. Every hit of this combo lands at high or mid level, so the entire thing can be blocked in the standing guard position. Worse still, if you're playing against characters who have an attack reversal, they'll reverse the 10-string almost immediately. Basically, when you're controlling Bryan, you may as well forget all about his 10-string attack, as it's effectively useless on any mode except the "Easy" difficulty setting.

● When you're more than three steps away from a foe, Bryan's attacking options are limited—he isn't designed for long-range combat. You could try a combo, but the chances are that your opponent will block or even reverse it. You could use the Flying Kneel Kick, but once again this cannot be relied upon, as it's easily blocked. When you get pushed away from your opponent, it's best to quickly move back into range using the dodge ability. This will confuse your foe and make him or her panic. Nothing is more frightening than a powerful character like Bryan coming towards you from what seems like both sides!

BRYAN FURY VS CPU STRATEGIES

VS EDDY GORDO

Eddy is one of the toughest opponents that you'll have to face when playing as Bryan: Gordo's biggest strength is in his low, swinging style of attack, and this is the weakest part of Bryan's game, as he's focused on powerful high- and mid-level attacks. You must block low then counter with power and accuracy.

VS YOSHIMITSU

Yoshimitsu just loves to attack you with slow turning kicks, and his other high- and mid-level attacks. To avoid this aspect of his game, simply duck; once the danger has passed, attack with a power move or, better still, a combo. If he uses any of his stranger moves, like sitting down, use Bryan's Snake Edge.

VS HWOARANG

Hwoarang has some extremely powerful attacks and will always combo when given the chance—very rarely will you see him use a single kick; it will almost certainly be followed by a chain of them. Wait for him to attack with a high kicking combo, then duck the attack and retaliate with the Hands of Doom combo.

VS NINA WILLIAMS

Nina's tough, so winning this fight can be tricky. However, Bryan's strength gives him the ability to play the counterattacking game very well. You cannot make much use of his low attack reversal, as a high proportion of Nina's moves are aimed high, but sound blocking skills will give you many chances to counterattack.

VS FOREST LAW

Forest's predictable fighting style leaves him vulnerable to a character with Bryan's power and speed. He uses lots of long combo attacks and flip kick moves and these are easy to block or preferably avoid. Once you have evaded his attack, counter with something like the Hammer Driver. This should be no problem to even an average player.

VS JIN KAZAMA

This is another difficult match, mainly because Jin has an excellent attack reversal move that effectively means he can take away Bryan's powerful style of attack. For this fight, use low attacks like the Snake Edge or Bruce Special. Steer clear of high level punching combo attacks, as Jin reverses them every time.

VS LING XIAOYU

Ling is a tough character to fight due to her speed and low fighting style, but you can use Bryan's power move to cause huge amounts of damage when you get the chance. Once again, the most important factor is your ability to block. If you can do this, retaliate with combos like the Hands of Doom or High Kick to Rush.

VS KING

King is dangerous, mainly because of his excellent throwing strength and ability to continue a throwing chain after the initial hit. Use all of Bryan's speed to take King out with powerful attacks that can be started from a safe distance. If you attack while you move in, you give King no chance to throw you.

VS LEI WULONG

Surprisingly, your match against Lei Wulong is quite easy, as his style is unique but predictable when the CPU plays him, so you can easily learn to read his attacks. He loves to use the Turning Punch combo; for this, simply duck and counter with the Hands of Doom. Bryan's power will floor him in no time!

VS GUN JACK

Gun Jack's power and throwing ability make this match similar to the one against King, but Jack has other extremely powerful moves, mainly punches, that rapidly drain energy. Because Bryan has no high attack reversal, you have to use speed and timing to catch Gun Jack when he least expects it. Above all, stay out of his throwing range.

VS BRYAN FURY

Because of Bryan's power and lack of an attack reversal, the first player to land a good combo attack holds a major advantage in this match. If you can rely on your blocking skills to stop your opponent's attacks (it shouldn't be too hard, as 90% of Bryan's attacks are high), you'll have lots of counterattacking chances.

VS KUMA

This match is a piece of cake for even a halfway reasonable Bryan player. Kuma is slow and can be combo'ed with ease. The golden rule for this match is to avoid close combat. Just stay back then move in as you attack; the bear has no chance to throw you.

VS HEIHACHI MISHIMA

Beware of Heihachi's sweeping attacks, as they can be difficult to block. It's possible to use Bryan's Low Dodge to reverse these moves, but your timing needs to be very precise, so a simple block is the best idea. While both characters have excellent power, you have speed on your side, so you use it to your advantage.

VS JULIA CHANG

Julia Chang has numerous combo attacks that strike at different heights. The Low Parry can be used to reverse the low kicking moves that are included in most of her combos, but your timing is crucial. It's important to vary your moves—because of Julia's speed, she'll soon catch on to your tactics if you use the same attack over and over.

VS MOKUJIN

Mokujin will act like a different character each time you fight him, but if you know that character's opening move, you can use the correct Vs strategy. For example, if he crouches down and hits the ground with his fist, you know he's acting like King.

VS PAUL PHOENIX

While Paul is one of the strongest characters in *Tekken* 3, he isn't that difficult to beat while playing as Bryan. Keep your distance and wait for him to attack—he's extremely aggressive and his attacks are fast and powerful, so be ready—then block and counter with a combo. If you can block well, this match should be no problem.

Bear smash Paul! The first Kuma died of old age during its travels with Heihachi. Its child, also named Kuma, became Heihachi's second pet. This Kuma is smarter than its father, and a good bodyguard for Heihachi. One day when it was absorbed in watching TV, it suddenly went wild at the sight of a martial artist with a scarlet go-gi—Paul Phoenix! Kuma has trained since that day to defeat Paul in battle. It doesn't think anything of Ogre, only of defeating Paul.

STRONGEST MOVE

By far, Kuma's best attacking move is this extremely powerful Bear Hammer. It's one of the fastest in Kuma's arsenal, which makes it difficult to block and even harder to reverse.

GENERAL FIGHTING STRATEGIES

Kuma is arguably the most powerful character in *Tekken* 3, even above the massive Gun Jack, but has low speed and agility, so using this strength effectively causes problems. This all adds up to a character who doesn't lend himself well to the novice *Tekken* player. If you're new to the game, you should go for a character who has balanced speed and strength, as they're much easier to control while you're becoming accustomed to the gameplay. However, when you have improved your skills and moved up to an intermediate (and then even expert) level of play, perfecting

Here Kuma demonstrates a rare kicking attack. Because his legs are so short, this kind of attack is only recommended when you're really close to an opponent.

Kuma and turning him into a deadly fighting machine is an excellent challenge. If you can kick butt with Kuma, you can truly call yourself a *Tekken* 3 master.

Once your enemy has been knocked to the ground, use Kuma's power to follow up the attack for extra damage.

To play Kuma like a pro, you must utilize the immense power you have at your disposal. Because he has poor speed and mobility, taking full advantage of the strength advantage he holds over every other character is the only way to win the tougher battles. This means that you must think ahead while you fight—decide what to do next and use your skill and ability to get Kuma into a good attacking position early. If you can do this, you limit the effect his lack of speed has on the bout and partly cancel out the advantage your opponent has in this crucial area.

Throwing attacks play a major part in Kuma's fighting strategy. Using them skillfully is the key to mastering this difficult character.

Kuma has no 10-string attack, but when you take into account his size and lack of speed, this isn't surprising. As with most of Kuma's attacking strategies, the trick is to use this big combo as a counterstrike. Wait for your foe to attack, then when the move breaks down, use Kuma's Hammer Rush combos to punish them with deadly force. Successfully using this tactic takes lots of practice, but when perfected it makes a big difference. An opponent may think twice about launching a combo attack if he knows that he may find himself on the end of a 10-hit chain if he fails to connect!

A combination of low attacks works well against an unsuspecting opponent. Kuma catches Jin Kazama for a few easy hits.

If you're having problems delivering the whole 10-string attack, try using just the first section of it; this will confuse your opponent and make it harder for them to block or reverse it.

Defensive play is very important, because as Kuma, you simply don't have the speed to keep an attack flowing. This means your blocking must be first class, as you'll be relying on it to give you lots of counterattacking chances.

Jin falls foul of a nasty Bear Hug from the mighty Kuma.

Blocking is vital!

Kuma

STRENGTHS

● Kuma's biggest strength is without a doubt his amazing power—he can kill an opponent in a couple of attacks, putting him among *Tekken* 3's deadliest characters. If you can use this power to your advantage and find a way of minimizing his speed limitations, Kuma is a good fighter. Mastering Kuma is one of the ultimate challenges in *Tekken* 3.

● Kuma has an excellent throwing range. Along with Gun Jack's, it's the best in the game, and this makes him a threat from a seemingly impossible distance. You can use this range to spring a surprise attack on a careless opponent when he or she least expects it—for example, if he or she attacks and misses, pull out a quick counter-throw for huge damage! Because Kuma's throws are by far his most powerful attacks, you only need a few of these chances to KO an opponent: A single counter-throw from the mighty Kuma can inflict almost 65% damage!

● The final factors that add to Kuma's overall strength are his unblockable attacks. While many characters have one or maybe two unblockables, Kuma has two. Only Yoshimitsu has more moves of this type, which gives Kuma an advantage over most fighters. His unblockable moves are the Fatal Wind (200% damage!), and Deadly Claw (35%). The ultimate power of the Fatal Wind makes it the best, but using a combination of both gives you a powerful and varied way of quickly devastating your enemy.

WEAKNESSES

● Kuma's biggest weaknesses are obviously his huge size and complete lack of speed. Moving around the battle area and pulling off moves under pressure is a big headache when you have poor maneuverability.

● With no reversal attack of any kind, Kuma is an easy target for long chain attacks. A fighter can attack Kuma in relative safety, knowing he or she cannot reverse their moves and hasn't got the speed to avoid them. Unless the Kuma player is an expert blocker, they at least score a few hits. This becomes even more of a problem for Kuma when you play with guard damage switched on—even when you block your opponent, you still lose energy! In this situation, the only thing you can do is use the sidestep ability to try and avoid chain attacks.

● Kuma's sluggishness makes him particularly vulnerable to high/low chain attacks, as he simply hasn't got the speed to change his stance in time to deflect the blows. This is a major problem against characters like Julia Chang and Nina Williams, as they have high/low attacks that will have Kuma on his back in no time! To play Kuma successfully, you must be an expert blocker who can read and recognize when, and more importantly where, their opponent will attack next!

● Because Kuma has such short legs—after all, he is a bear!—his kicking attacks have an extremely short range, making them the perfect counterattacking target. Opponents can just hang back out of sweep range and wait... then when the Kuma player attacks with a kick, they move in and use a big combo for huge damage on the counterattack. It's recommended that you use punches for the majority of each round, and only use kicking attacks when you're at close range and are certain they won't fall short.

KUMA VS CPU STRATEGIES

VS EDDY GORDO

Eddy will come at you fast and furious. Play a defensive game at first, but watch for your opportunity to take him down.

VS YOSHIMITSU

Yoshimitsu isn't difficult to beat, provided you play the waiting game, then use Kuma's power to counterattack. However, you must be able to block all of Yoshimitsu's spinning kicks and other such fast attacks to have a chance. Always go for a throw as soon as the match starts—nine times out of ten, you get a free strike.

VS HWOARANG

Hwoarang uses lightning-fast kicks and sheer speed to overwhelm his opponents, so he's terrifying for the slothful Kuma. Your blocking is vital: If you fail to block the first kick, you can almost guarantee he'll follow it with more. If you can block his attacks, you have the chance to use powerful counterattacks; if not, it's game over.

VS NINA WILLIAMS

This is a real tricky match. Nina is fast, powerful, and difficult to block consistently. Unless she's committed herself to a big move, you can't often grab her, and this takes away Kuma's advantage. You have to rely on blocking and hopefully pull off a few counterattacks. You have to be a *Tekken* expert to beat Nina on the high difficulty setting.

VS FOREST LAW

Law is tough. Grabbing this guy on the hardest difficulty setting is almost impossible—he reverses the throw and usually comes back at you with a combo. Basically, you should only use throws on counterattacking chances. Instead of throws, try using the Triple Uppercut—it's powerful and quite fast.

VS JIN KAZAMA

Jin is another tough opponent for Kuma, this time because he has an attack reversal and a huge range of powerful kicking moves. Fast and furious is the key here: The longer the fight goes on, the more likely Jin will gain the upper hand. Stick with Kuma's most powerful attacks, the Bear Hammer and the Overhead Smash.

VS LING XIAOYU

Once again, the fast, agile Ling represents a challenge. Use the Overhead Smash/Double Hammer combo to punish her whenever you can. This move is arguably Kuma's fastest and therefore is about the only combo that's worth attempting. If you manage to connect with both hits, you score 22% damage.

VS KING

Yet another difficult match, this one poses a new problem. Kuma's strength lies in his excellent throwing ability—unfortunately, so does King's, plus the wrestler has a speed advantage. Use jabs to keep King out of throwing range and use Kuma's power attacks when you get the opportunity. Moves like the Windmill Punches, Triple Uppercut, and Hammer Rush all work well.

VS LEI WULONG

This is a surprisingly easy fight for Kuma. All you need do is duck low and wait until Lei moves in with his long punch combo; it's a favorite move of his, so you won't have to wait long. After you have blocked the second punch, counterattack with a throw. Try the Rock 'N' Roll Circus, as it inflicts a huge 60% damage.

VS GUN JACK

Gun Jack is very similar to Kuma, relying on strength and throws to compensate for his lack of speed. So as you have probably guessed, the key maneuvers in this fight are blocks and counterattacks. The fighter who can repel his opponent's advances the most skillfully holds a huge advantage in this battle of the heavyweights.

VS BRYAN FURY

Bryan has all the elements needed to pummel Kuma into the ground time and time again. In this match, your blocking ability is tested to the limit. As well as your throwing attacks, you should use some regular moves. Try using something like the Sit Punches combo, as its low attack level will surprise Bryan.

VS KUMA

This mirror match should be approached in the same way as your fight with Gun Jack—blocking and counterattacking are the orders of the day. Watch out for the CPU's ability to perform throws from a seemingly impossible distance, and don't forget that you can stop a throw by performing the button motions for a throw at the same time.

VS HEIHACHI MISHIMA

As soon as this match starts, go for a throwing attack, followed by a ground attack, which should give you almost a 50% lead in the energy stakes. Now it's just a matter of staying back and blocking Heihachi's power moves, then counterattacking with something like the Triple Uppercut and another ground attack.

VS JULIA CHANG

Julia is a weak character who should be easily beaten on the lower difficulty setting, but when things are harder, she begins to reverse your throws, causing no end of headaches! When she does this, hang back and use skillful blocking to stop her high/low attacks, then launch a counterattack of your own.

VS MOKUJIN

Mokujin changes the character he copies each round, in effect giving him a different fighting style each time. No specific advice can be given, but if you watch him at the start of the fight, Mokujin performs a characters' taunt. If he shakes his hands at you while they smoke, for example, he's impersonating Gun Jack, so use that Vs strategy.

VS PAUL PHOENIX

This match is tough, but considering the ease with which Paul disposes of some opponents, Kuma doesn't fair too badly. Stay one step away—that way Paul's power moves are easily avoided with a sidestep—then perform a power move like the Grizzly Claw to inflict a massive 40% damage. Follow up with a ground attack to cause even more pain.

Family matters.... Heihachi retrieved the Mishima Financial Empire by defeating his son. Scheming to further develop the MFE, Heihachi organized Tekken Force, the MFE's private corps, and dispatched them to settle disputes and bring wasteland under cultivation to feed the poor countries of the world, in order to gain the support of leaders worldwide. Fifteen years later, a secret excavation of Central American ruins by the Tekken Forces unearths an unusual find. They were annihilated by a mysterious being. Heihachi realized that the mysterious being could be the legendary Ogre, and took action to realize his life's goal: to capture Ogre and therefore rule the world. One day, Heihachi was visited by a 15-year-old boy named Jin Kazama. Upon being informed that Jin was his grandson and hearing what had happened to his mother, Jun, Heihachi reasoned that Ogre thrives on the "strong souls" of others. Heihachi trained Jin to use him as a decoy to lure Ogre. In Jin's 19th year, Heihachi declared to the world that the third King of the Iron Fist Tournament was forthcoming. At the same time, he noticed that Jin, the youngest of the Mishima bloodline, began to show the same dangerous power Kazuya had. Heihachi decided to dispose of Jin after he lures Ogre, in order to end the doomed destiny of the MFE.

BEST MOVE

This is the deadly Demon Breath move and is the most useful attack in Heihachi's arsenal. It's extremely easy to perform, does lots of damage, and better still, it can be used to finish a combo with power and style.

GENERAL FIGHTING STRATEGIES

Quickly follow the crouch-dash technique with a surprise attack.

You first need to learn how to utilize Heihachi's Crouching Dash technique. This move is very important, as it compensates for his lack of mobility and speed. Heihachi can cover a relatively large section of the fighting area—about two or three steps—in a very short period of time, plus there's the advantage of avoiding all high level attacks during this movement.

His most potent form of attack follows the Crouching Dash or Spinning Demon. When Heihachi performs the Crouching Dash, his opponent simply cannot tell what's going to come next. You could go for a Dragon Uppercut that hits mid, a Jumping Mid Kick, which obviously strikes at an opponent's mid-section, or even a powerful low Spinning Demon. These are just three examples from many variations of attack, striking at different levels to make it almost impossible for an enemy to know where to block to avoid a battering.

The Dragon Uppercut is one of Heihachi's most powerful Special Arts, and it can even be used to complete a combo, making it even more useful.

You can even follow the Spinning Demon with the Demon Uppercut to form a small chain combo and score around 35% damage.

Use the Crouching Dash with variation, and you have a deadly basis for all of your attacks.

An excellent little tactic based around the Crouching Dash is the "fake out." This simple but effective ploy involves performing the move but not following it with an attack. Heihachi simply moves three steps closer to his opponent then returns to the normal standing position. Because your opponent will expect an attack, he or she will be thinking about blocking, instead of using a strike of his or her own, so you have a second to take the advantage before he or she realizes what has happened. Try something like the Neck Breaker—it

Heihachi's Neck Breaker throw is easy to perform and inflicts significant damage, provided you can get close enough to use it.

inflicts 30% damage and looks really cool!

One of Heihachi's most dangerous maneuvers is the Hammer to Power Punch combo. This two-hit combo, which looks almost identical to Paul Phoenix's combo of the same name, is extremely powerful and, more importantly, fast. The mid-level Hammer Punch takes almost no time to perform and is extremely easy to pull off, making it perfect for tight situations. The following Power Punch, which also strikes at mid level, is even more powerful and inflicts satisfying damage—if both attacks connect, you drain around 41% of your enemy's energy!

Many experts agree that in *Tekken* 2, Heihachi was extremely strong, but lacked an attack that was fast and almost unreversable. In *Tekken* 3, he has an attack that fits this requirement almost perfectly—Demon Breath! Provided you don't overuse it, this attack is a real killer. It's fast and powerful, draining 22% of energy when a clean hit is scored.

With a character like Heihachi, who has massive amounts of power but lacks speed, hitting a downed opponent is important, as it gives you an easy, almost free attack. Knowing which form of attack to use is essential. Pounce attacks are very risky, for example, because Heihachi's too slow. Use a Spinning Demon, then if your opponents don't get back to their feet quickly, you can continue to use the move to score successive hits.

Heihachi Mishima

STRENGTHS

● Heihachi is one of the most powerful characters in *Tekken* 3. He has an awesome blend of power and juggle combos. His arsenal of moves isn't as large as some of the fighters', but he has enough to mix up his attacks and keep opponents guessing. This also means that you can perfect his moves in a relatively short space of time and thus develop a rounded game.

● Heihachi has a number of powerful moves that set him apart from almost every other character—moves like the Twin Pistons, Hammer Punch, Rising Uppercut, Heavy Power Punch, and Demon Breath all inflict more than 20% damage. The other good thing about most of these moves, and many of Heihachi's other attacks, is that they're easy to perform, a real bonus in the heat of battle. You can afford to play like a turtle for a while and wait for your opponent to come forward, then devastate him or her with power moves.

● Throwing techniques have always been a big and extremely useful part of *Tekken* combat. In *Tekken* 3, this game element has become even more important, particularly with the addition of the sidestep ability. Heihachi has a good variety of throws that utilize his immense power: four frontal throws, two side throws, and one that can be done directly behind an opponent. The side throws are particularly useful; when used directly after a sidestep, they're a great way to counterattack an oncoming opponent.

● Heihachi's unblockable attack is the Lightning Hammer. In a shower of electrical energy, Heihachi raises his arm and powers up the unblockable attack, then unleashes the accumulated power in a chopping motion that smashes his opponent to the ground. This move has a number of useful properties: it's very easy to perform, drains nearly half your enemy's energy, and is extremely fast once it's charged up.

WEAKNESSES

● Despite his power, Heihachi isn't a young man. His age is beginning to show, and this is particularly noticeable in his speed. He isn't as fast as in previous *Tekken* tournaments and this can cause problems, particularly when trying to utilize his power moves which usually have to be performed close to your opponent. As you can appreciate, it's difficult to get close to foes when you have limited mobility. You must learn to take advantage of your enemies' mistakes, which takes time and practice but this skill develops as you play.

● As a result of his lack of speed, a good deal of Heihachi's chain attacks can be reversed or blocked between hits. Against faster characters like Nina, Paul, and Ling this can be a real headache, and the only way to get around it is to fight cleverly. You should use short, powerful combination attacks that give your opponent no chance of reversing. Using long chain attacks is asking for trouble.

● Heihachi doesn't have a proper reversal move—Charging Hard only works on right kicks! Unless you're intimately experienced with your assailant's moves, it's highly unlikely you'll be able to see a high right kick coming soon enough to use the reversal. You need to be familiar with all characters so you can dodge or block then counterattack their favorite moves, as that important *Tekken* reversal ability is basically missing.

HEIHACHI MISHIMA VS CPU STRATEGIES

VS EDDY GORDO

Eddy's speed and low level fighting style are difficult for Heihachi to combat. For this match, stay back and wait for Eddy to come to you—your blocking has to be excellent, so stay alert. When an opening arises, use Heihachi's power to maximum effect.

VS YOSHIMITSU

Because Heihachi has no real reversal attack, you have to use more cunning tactics to gain the upper hand. Unless you're on the highest difficulty setting or beyond the sixth stage, Yoshimitsu only uses a few of his moves, so work out his favorites and block accordingly. This gives you many counterattacking chances.

VS HWOARANG

Concentrate on utilizing Heihachi's powerful attacks to maximum effect. The Crouching Dash is very useful in this match—because about 60% of Hwoarang's moves are high attacks, you can use the crouch technique to get close to your foe in relative safety. Once close, use your powerful advantage.

VS NINA WILLIAMS

Nina's speed, strength, and fast chain attacks make her deadly against the relatively slow Heihachi. The trick in this match is to keep her at a manageable distance—if she gets in close and brings the fight to you, it spells disaster. Her favorite attack seems to be the Blonde Bomb, so use a quick sidestep to avoid it then follow up with a throw.

VS FOREST LAW

Law's predictable style of combat makes him an easy target for counterattacks. As always, your blocking skills must be first-class. Wait for the fast-moving Law to begin one of his chain attacks and when you have blocked it, retaliate with a move of your own. The Demon Uppercut works particularly well when Law tries one of his many kicking combos.

VS JIN KAZAMA

This is almost a mirror match, as Heihachi and his grandson have similar fighting styles. The main differences are that Jin has reversal moves and less power. You should continually vary your attacks; if you fail to do this, Jin will soon wise-up to you and reverse your power moves for big-time damage.

VS LING XIAOYU

Ling uses her array of moves to confuse you and then attacks when your guard is down. As with so many fights, simply wait her out. If she tries to mix things up by using the Art of Phoenix Stance, simply use the Demon Uppercut or Hammer Punch. You can use Heihachi's unblockable move in this situation, if you're quick.

VS KING

King likes to use his multi-part throws, particularly on high difficulty settings, so keeping out of harm's way is essential. You should be able to see when a multi-part is coming, as King ducks slightly. When this happens, grab him and use a throw of your own. Use Heihachi's power moves to attack King from a safe distance.

VS LEI WULONG

Lei has an unpredictable fighting style and likes to use his Play Dead move. If he uses this move, back off—Heihachi's lack of speed means that moving in on Lei as he lies on the ground is fatal. Stay back and prepare to attack him as he rises to his feet.

VS GUN JACK

Defeating the powerful but cumbersome Gun Jack should be a piece of cake for even an average Heihachi player. Simply use power attacks to maximize your speed advantage. The Crouching Dash is particularly useful and can lead into a combo that can easily be varied.

VS BRYAN FURY

This match is one of the toughest in *Tekken* 3. Bryan can match Heihachi when it comes to combo attacks and power moves. Limit the amount of times you use the Demon Uppercut and Twin Pistons, as Bryan has the speed to nail you after you've completed them. Pin him down and use Heihachi's power moves to keep him under constant pressure.

VS KUMA

This Kuma is slightly faster than the one in *Tekken* 2 but still represents as easy victory for the competent Heihachi player. Use a combination of power moves and chain attacks to ensure an easy victory. The only golden rule is not to get close unless necessary, as Kuma's throwing range is immense.

VS HEIHACHI MISHIMA

Whoever draws first blood wins! The CPU-controlled fighter is extremely aggressive but also very predictable, and this gives you the upperhand. Simply wait for Heihachi to make the first move, then either block and counter or, better still, sidestep then pummel him with a combo.

VS JULIA CHANG

As Heihachi's outclassed in the speed department and has no real reversal move, you must play a waiting game and only attack when an opening presents itself. If you try to force the pace of the match, Julia will run rings around you. Wait for her mistakes, then punish her with power attacks and combos.

VS MOKUJIN

Mokujin changes the character he copies each round, giving him a different fighting style each time. Watch him before the fight begins and he gives you a clue. If he walks toward you with his hands behind his back, for example, he's imitating Bryan Fury, so use the relevant Vs strategy.

VS PAUL PHOENIX

Paul moves toward Heihachi with alarming regularity, which usually means that he's looking to use a sweeping attack, followed by a Flash Elbow or similar move. The best way to combat Paul is to block solidly, then use Heihachi's strength. Heihachi's lack of a proper reversal attack makes this a tough match, so hang in there and keep your guard up.

Searching for Michelle.... Julia studies archaeology in Michelle Chang's tribal lands. As a baby, Julia was deserted in the ruins of ancient Native American settlements, where Michelle found her. Michelle rescued Julia and brought her up with love. Julia loved Michelle and her adopted tribe and trained with Michelle to protect her beloved homeland. When Julia was 18, stories of sudden disappearances of famous martial artists all over the world began to reach the tribe. The tribe knew the cause, which was contained in the tribal legends... the legend of Ogre. People in the tribe feared that Michelle's pendant, the key to a Native American sacred treasure, had something to do with the disappearances. With apprehension spreading through the tribe, Michelle left for Japan to ask Heihachi why he had sought to take the pendant during the second tournament. Michelle hoped to learn about the origin of Ogre's power, but she never returned. Julia suspected Heihachi and now seeks him out to discover the truth.

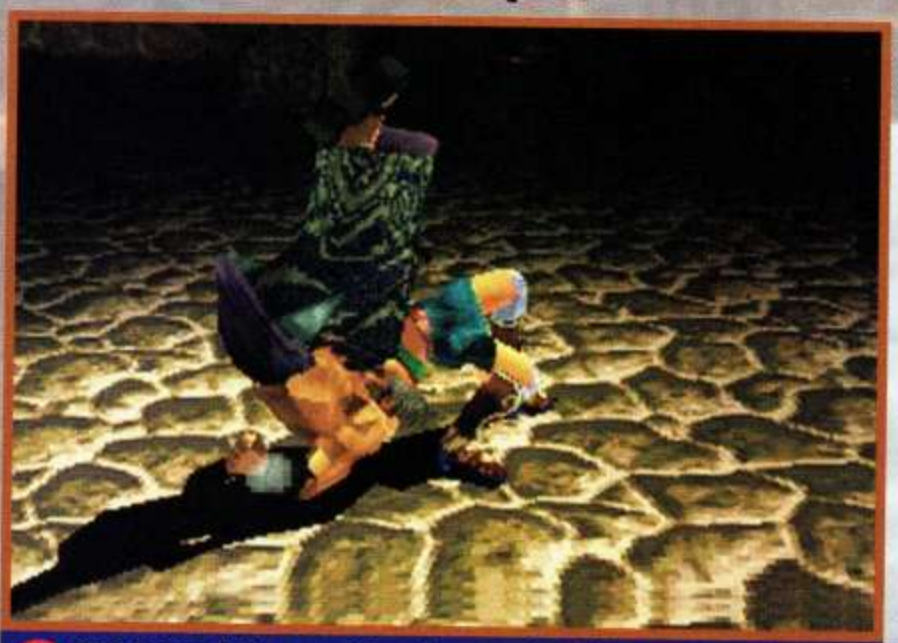
STRONGEST MOVE

Julia's strongest move is a combo attack, the fearsome Rush Bow & Arrow Kick. The reason why it's so good is simple—it strikes opponents three times at different heights, making it extremely difficult to block.

GENERAL FIGHTING STRATEGIES

Being knocked to the floor and dealing with the results as best you can is a large part of *Tekken* 3 gameplay. When you're playing as Julia, however, your speed and agility should certainly help you. Make best use of her speed by going for a sweep as she gets back to her feet. Not many opponents have the knowledge, experience, or simply the ability to block low in time to stop this cheeky little attack. You also have the chance to follow it with a ground attack, which once again means you can make use of Julia's excellent speed.

Julia uses a three-hit combo to counterattack Heihachi. Once the first hit of the combo has connected, the following two are guaranteed.



This is one of the many throwing attacks Julia has in her arsenal. They all inflict high amounts of damage and are easy to perform.

Julia is a much better character when she's advancing to attack her enemy. This is true for most *Tekken* 3 fighters, but in Julia's case, her lack of defensive moves makes this factor more important. To sustain a constant and varied attack for about 70% of a fight takes lots of practice, complete knowledge of your character's moves, and the ability to think on your feet. Your moves should flow together so that your opponent hasn't time to think. Use as many different moves as is practical—if you become predictable, you'll be stopped with counterattacks and reversals. If you're playing against a character with an attack reversal (Paul, Jin, Nina), use Julia's shoulder attack more often—it cannot be reversed.

Another important skill when playing as Julia Chang is the ability to counterattack an opponent effectively and at a moment's notice. This is one of the hardest skills to learn, but also one of the most worthwhile. If you can perfect this skill, you partly compensate for Julia's lack of raw power.

Counterattacks generally fall into two categories: major and minor counterattacks. A major counterattack is when you tackle your opponent before he or she can deliver the move—while charging an unblockable, for example. Julia's speed makes this easier, but you must still instantly choose your countering move. A minor counterattack involves blocking, avoiding or dodging an opponent's attack, then hitting him or her before he or she has the chance to block. Once again, Julia's speed simplifies this skill. Try countering with a throwing attack or the G-Clef Cannon combo. This move works well for a major or minor counterattack and causes around 21% damage—this may increase, as the hit scores as a counterattack.

While Julia has no real attack reversal—the Low Parry only reverses low kicking attacks—the ability to escape throwing techniques is a very useful skill to have, particularly as two of her longer chain combos can be stopped relatively easily, giving an opponent the opportunity to use a throw. If you're doing a long combo and think your opponent is going to use a reversal throw, be ready to press the correct button to escape it. The hardest part of breaking a throw is recognizing which throw your opponent is using and therefore how you must break it, but Julia's speed makes it a little easier.

Speedy Julia gets behind her opponent, then uses a back throw.

The G-Clef Cannon (LP, LP, LP) makes full use of Julia's speed. It's one of her most powerful attacks.

Julia Chang

STRENGTHS

● **Julia's main strength is her ability to dash toward an opponent and attack with ferocity, speed, and variation. For example, the G-Clef Cannon and Bow & Arrow Kicks are both excellent multi-level attacks that are fast and score 21% and 15% damage respectively. If you can utilize these attacks and perfect them, you have a varied attacking arsenal that puts even the fastest characters under pressure. Most of these attacks are easy to perform, a real bonus when fighting under pressure.**

● **Another strength is her long reach. Always remember that Julia is primarily an offensive-minded player. This isn't to say you should forget about defending, but Julia is strongest and easiest to control when on the attack. For example, the Ultimate Cannon is a powerful attacking chain that can cause 25% damage and hits an opponent at three different levels in rapid succession, which makes blocking extremely difficult.**

● **Because Julia has such a large arsenal, she has one of the most balanced attacking styles in *Tekken* 3—an opponent can never be sure what's coming next. Use Julia's unpredictable nature to your advantage and you'll be up there with the *Tekken* elite!**

● **Julia's final strength is her ability to juggle an opponent with relative ease, for big damage chain attacks. Because she doesn't have much in the way of raw power, she has to rely on speed to score hits, and juggle combos are perfect for this. Once her assailant has made the initial mistake and been knocked into the air, the rest of the combo is almost guaranteed.**

WEAKNESSES

● **Julia's biggest weakness is her lack of attack power, which discourages people from choosing her. Her power is arguably the lowest in the game, and this means you sometimes have to hit an opponent almost twice as many times as they do to score the same amount of damage. The only real power move Julia has is the Twin Arrow. This double punch stuns an opponent if blocked and causes 25% damage when a clean hit is scored—which by *Tekken* standards is a little low.**

● **A second problem is that she can be very vulnerable to a counterattack when she misses with a combo. This problem is amplified by her lack of strength. If a powerful character like Paul Phoenix or Heihachi Mishima get a counterattacking chance, he can wipe out 50–60% of her energy! When you go for a combo, you must make sure it connects or you're left open to all sorts of counterstrikes.**

● **Julia is very difficult to learn—you can't simply choose her and expect to have everything sorted out in a matter of minutes. You have to put in a lot of practice if you want to be good with her. This difficulty factor is also present in her juggle combos, which are easily her most potent form of attack. Julia is a good character but she's one of the hardest to learn, and coupled with her lack of power, it's enough to make players shun her.**

JULIA CHANG VS CPU STRATEGIES

VS EDDY GORDO

Although Eddy and Julia are pretty evenly matched, a few of Eddy's attacks are faster than Julia's. This gives him a bit of an edge that you'll want to watch out for. Eddy tends to stick with low attacks, so practice your low attack reversal. Take your time.

VS YOSHIMITSU

When fighting Yoshimitsu, the key is to block well then counterattack. He has a predictable style of fighting and, provided your blocking is solid, you have regular opportunities to hit back. Use combo attacks like the G-Clef Cannon or Bow & Arrow Kicks for the most effect and damage.

VS HWOARANG

Hwoarang is a very difficult character for Julia because he's so offense-minded, always coming forward with kicking combos and other devastating chain attacks. Use Julia's high/low variations to mix up your combo attacks, then utilize her speed to avoid his attack with the dodge technique.

VS NINA WILLIAMS

Nina has a great number of high/low attacks similar to Julia's, and with more strength. The Low Parry comes into its own—you can use this to reverse a great deal of Nina's attacks, including a few of her chain combos. Timing is very important, but if you can interrupt her combos, you have a good chance of winning.

VS FOREST LAW

For this match, the strategy is simple: counterattack! Wait for Law to attack (this will usually be a long punching combo or the flip kick variation) then make sure you fully block his moves. This gives you the chance to counterattack for big damage. Use combos like the Bow & Arrow Kicks for most damage.

VS JIN KAZAMA

This is a very hard match; Jin has an awesome combination of speed, power, and a reversal move. Use a variation of attacks in an attempt to confuse Jin—constantly switch between low and high attacks and mix in the occasional combo. If you can fool him into thinking that you're going for a high attack, go low and use an uppercut to begin a juggle.

VS LING XIAOYU

Use a wide variation of sweeping combo attacks—the Triple Spinning Kicks are the perfect example, as they're fast and cause considerable damage on a clean hit. If Ling attempts the Art of Phoenix stance, use a sweep followed by an uppercut to knock her into the air, then use your favorite juggle combo to nail her for big damage.

VS KING

Try and stay at least three steps away! If you get too close, not even Julia's speed can save you from a powerful throwing move. You must use the dodge ability to confuse him while you slowly reduce his energy. You can't move in and attack, as Julia hasn't got the power to win a slugging match.

VS LEI WULONG

Lei's favored methods of attack are strings of high punches and the sweep/high kick combo. Simply block the punches or, better still, duck them then use a big combo. The sweep/high kick combo is harder to counter, but if you block the first sweep, you'll have no problems counterattacking after the following high kick misses.

VS GUN JACK

Gun Jack's sheer size and lack of speed make him an easy target for the agile Julia. Don't let him get close to you. Use a combination of dodging and moving back and forth to confuse Jack while chipping away at his energy. If you get the chance to attack high, use an uppercut to begin a juggle combo.

VS BRYAN FURY

Bryan is a deadly mixture of power and speed. Use all of Julia's speed to keep Bryan on his toes. Skillful use of the sidestep move can avoid his power attacks, then give you the chance to counter. Because most of Bryan's moves have a long lag time, you get plenty of time to measure your attack and fight back.

VS KUMA

This match is easy. He has hardly any speed, making him predictable and therefore easy to counterattack. Use Julia's speed to juggle Kuma for mega damage. If you use high/low attacks you can get him every time, as he can't react quickly enough.

VS HEIHACHI MISHIMA

For this match you should simply rely on the huge speed advantage Julia holds over Heihachi. Use the sidestep maneuver to avoid Heihachi's power attacks then launch a counter combo of your own—use something like the G-Clef Cannon or Machine Gun Punch for speed. Both score around 20% damage.

VS JULIA CHANG

This bout is usually decided by which fighter has the most varied and imaginative style of attack. If you rely on a handful of moves, your opponent quickly catches on and begins to block, which gives them the chance to counterattack. Vary your attack as often as possible. Use high then low attacks and keep her guessing.

VS MOKUJIN

To work out which Vs strategy to use against this impersonator, watch what he does at the start of the bout. If he walks toward you, puts a hand on his hip, and looks up at you, for example, Mokujin has become Nina Williams.

VS PAUL PHOENIX

Paul Phoenix's moves are very fast and powerful; avoid Paul's attacks at all costs—it only takes a couple of Phoenix Smashers to defeat Julia. Use her high/low combinations to wear him down.

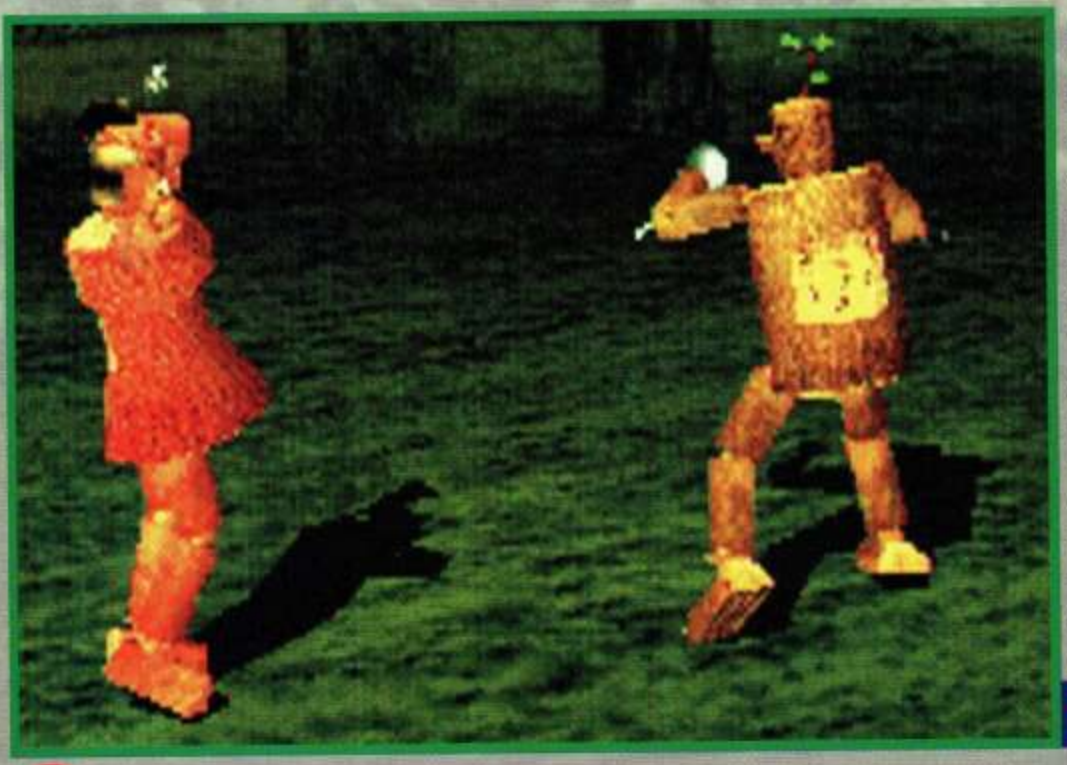
"I know you are, but what am I...?" Mokujin is a training dummy made from a 2,000-year-old oak tree. Mokujin has been kept in a museum for a long time, but when Ogre awoke, it gained self-identity and started to act on its own. Some people say it motivated by the desire to help martial artists, but only Ogre and Mokujin know for sure.

GENERAL FIGHTING STRATEGIES

Because Mokujin has the ability to impersonate any character in the game, choosing it is something of a lottery. It changes the character it impersonates before every round and this even affects the way in which you can use the characters—sometimes the Mokujin version of a character is significantly weaker than the original. This basically means that you must have the ability to play every character in *Tekken* 3 fairly well before you even think about choosing Mokujin. Only experts need apply!

Because the Mokujin version of a character isn't necessarily identical to the original, you must know what the differences are. Before you start to play as Mokujin, check out the "Same, But Different" section on the following page. You'll learn exactly how they differ and how to change the way you play the character know when controlling the Mokujin version.

Mokujin is the Russian roulette of Tekken 3; you never know what move set you're going to end up with. You'll get a clue when Mokujin first appears; it always emulates the opening gesture of whatever character it's copying. One more clue: When Mokujin fights as one of the male characters, it appears male and has a leaf on its head; and when it fights as a female character, it appears female and has a flower.



WHO AM I?

Mokujin can impersonate any of the main 15 characters in *Tekken* 3 and it changes the character it impersonates each and every round. This means that you can never be sure who you're controlling, or fighting, until the fight is about to start. However, if you watch Mokujin carefully just before the round starts, you should notice that it performs the taunt of the character it's imitating.

On page 135 is a list of characters and the corresponding taunts Mokujin uses. Learn the taunts and the way the fighters act and move and you'll know exactly who you're fighting as or against. At least give yourself a fair chance of winning!

As you should be able to tell from the taunt, Mokujin's mimicking Anna.

Mokujin Playing As...	Taunt Used
Eddy Gordo	Points at opponent or swings his arms around.
Yoshimitsu	Holds Yoshimitsu's sword.
Hwoarang	Scratches his head or performs four kicks.
Nina Williams	Puts hand on her head or puts hand on her hip.
Forest Law	Puts hands together and bows or jumps around.
Jin Kazama	Puts fighting glove on or puts hand on his hip.
Ling Xiaoyu	Holds her hands together or jumps around.
King	Crouches down or stands with back toward you.
Lei Wulong	Punches the air or folds his arms.
Gun Jack	Arms "explode" or does a double punch.
Bryan Fury	Puts hands behind his back.
Kuma	Performs forward roll or stands with arms spread.
Heihachi Mishima	Stands up from a crouch or with arms by his side.
Julia Chang	Puts hands together and bows or touches her hair.
Paul Phoenix	Taps fists together or runs fingers through his hair.
Anna Williams	Puts her hands behind her head.

THE SAME, BUT DIFFERENT!

Each round you play Mokujin, it becomes a different character.

Mokujin can perform the same moves as the fighter it emulates, but bear in mind that the wooden dummy is physically different from most characters, and so those moves might work a bit differently. For example, if Mokujin is mimicking Gun Jack, it can use all of the Russian's special attacks etc, but Mokujin's height and speed stay the same, so it isn't physically the same as Jack. Certain special moves and tactics may not work when you're controlling the Mokujin version of a fighter.

In this section we look at the differences and drawbacks you can expect for each character, so you can adapt your fighting strategy to maximize Mokujin's abilities.

As Eddy Gordo or Tiger

The Mokujin version of Eddy Gordo is nowhere near as effective as the original because of one simple fact: Mokujin has shorter legs! This takes away the strongest part of Eddy's game. To combat this problem, you have to get much closer to your opponents before using a move, and this means you have to be much better at blocking.

As Yoshimitsu

Mokujin is quite similar to Yoshimitsu in terms of stature, and this means that the wooden version of the cyber-ninja is pretty much identical to the original. All the tactics and tricks we gave you for Yoshimitsu work perfectly when Mokujin mimics him.

As Hwoarang

In terms of kicking speed, Mokujin is as fast as the real Hwoarang and this means that you can use the same tactics and strategies. However, the difference is that Mokujin cannot sidestep as fast as Hwoarang (even in the Flamingo Stance) so you cannot use the dodge technique to set up long kicking combos.

Mokujin

As Nina Williams

When Mokujin mimics Nina, the character you get is nothing like the original at all! Mokujin is much slower than Nina, so you cannot use her speed to overwhelm opponents like you normally would. This lack of speed also takes away Nina's ability to dodge around her opponent, which means you have to work much harder to keep your foe at a good attack range. Mokujin's range is much shorter than Nina's, so you mostly have to fight at close quarters to connect with her string attacks. Your blocking skills need to be excellent.

As Forest Law

When impersonating Forest, Mokujin suffers from a shortened attacking range and this affects the mid-range fighting ability that you usually get. Stay close to your opponent and Mokujin plays more like the original, but make sure you concentrate on your blocking. Also, Mokujin is slightly slower than Law, which makes him a little more difficult to play.

As Jin Kazama

Jin Kazama and Mokujin are pretty much the same size and height and have the same arm and leg lengths, which makes the Mokujin version of Jin almost identical to the original. When Mokujin mimics Jin, simply pretend you're playing as the real deal and you won't go wrong.

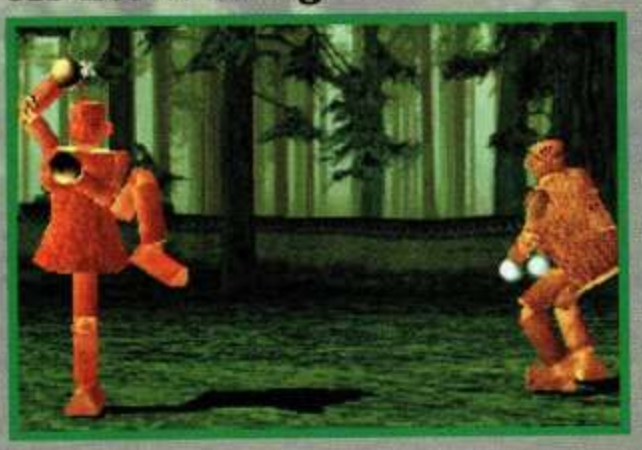
As Ling Xiaoyu

When Mokujin mimics Ling, she seems to pick up all of Ling's weaknesses without the benefit of her strengths, which as you can imagine makes life very difficult. Mokujin's speed and sidestepping ability are much more limited than Ling's and this means her biggest strength has gone! There's only one positive: Mokujin's longer arms and legs give it slightly more distance in its attacks.

As King

Because Mokujin has slightly shorter legs, you have to be careful when using King's kicking attacks, but this is only a minor problem. The throwing range is a bit lower, but the damage caused by the throws is the same. This incarnation or Mokujin is still useful, as these factors are what make King a good fighter.

As Lei Wulong



Mokujin tends to be more powerful in this instance, because he enjoys a better range than Lei. This means that some of the attacks and combos are easier to perform. The Mokujin version of Lei is an excellent character.

As Gun Jack

The Mokujin imitation plays pretty much the same as Gun Jack, but benefits from higher speed than the original and suffers from a reduced attack range. The shorter range is because Mokujin's arms are shorter than Gun Jack's, so you have to get a little closer to your opponent to use those powerful attacks.

As Bryan Fury

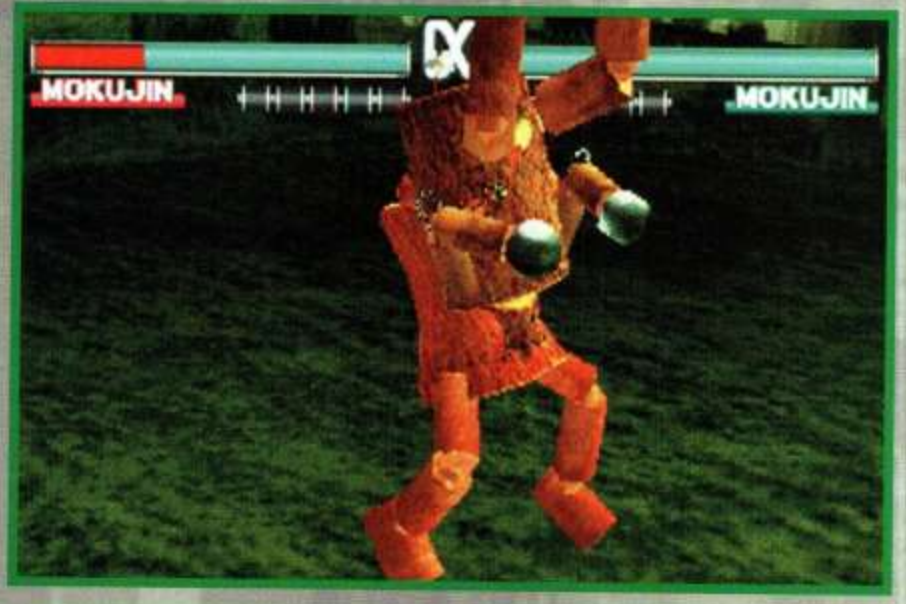
As with Jin Kazama, the Mokujin version of Bryan Fury can be played in the same way as the original character. Just turn to the "Bryan Fury" section of this book for lots of information on how to play as him.

As Kuma

When Mokujin becomes Kuma, it's very difficult to win unless you know his moves extremely well. The Double Hammer, which makes up a large part of Kuma's strategy no longer hits a grounded opponent, taking away a huge proportion of his combo attacks. Mokujin's arms are much shorter than Kuma's, so he hasn't got the attack range, making his limited speed even more of a problem.

As Heihachi Mishima

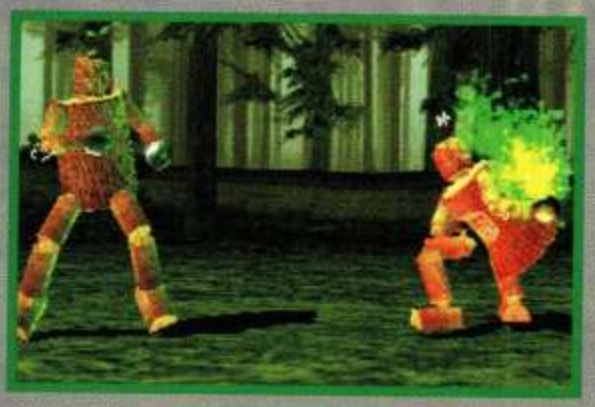
While the original Heihachi Mishima is slightly bulkier than Mokujin, their reach and overall abilities are the same. This means that the Mokujin version of Heihachi can be played in the same fashion as the man himself.



As Julia Chang

Mokujin's impersonation of Julia is pretty accurate. The only thing that has changed is her reach—Mokujin's arms are slightly longer, giving her an advantage in this area. On the downside, Mokujin doesn't have her speed, which makes sidestepping a little less useful.

As Paul Phoenix



Paul and Mokujin are comparable in size, and this gives the wooden man the same punching and kicking range as the real one. Basically, the Mokujin version of Paul can be played in the same way as the original.

The God of Fighting.... The legend of Native Americans says the Ogre is the war weapon which creatures from outer space left on Earth in ancient times. It understands entire structures of all living and artificial beings, and absorbs them. It wanders the earth in search of strong souls.

GENERAL FIGHTING STRATEGIES

The final boss is the all-powerful God of Fighting, and as you'd expect, he is the most powerful character in *Tekken* 3. In essence, he's a combination of all the sub-bosses from *Tekken* 2—as anyone who has completed that game will appreciate, this adds up to a fearsome character! He has moves taken from each of the *Tekken* 2 sub-bosses, including a selection of unblockable moves.

Ogre is one of the best sidestepping characters. He's very fast and his steps are so big, you can be behind an opponent in a couple of seconds. This allows you to quickly launch surprise attacks from your opponent's weak side.

One of Ogre's most potent attacks is the Infinity Kick Combo that he has stolen from Lee, a sub-boss from *Tekken* 2. This amazing kicking combo is very fast and it constantly switches between mid and high levels—it can drain an opponent's energy so quickly you won't believe it. The only downside to the Infinity Kick Combo is that it can be reversed, if your enemy wises up to what you're doing. However, if you don't overuse this combo, you keep the surprise factor and won't be reversed or countered.

Ogre's only significant weakness is his lack of 10-string attacks. However, this isn't such a problem when you consider that these long attacks are useless on high levels of play. Pro players rarely use a full 10-string attack, as chances are it will be reversed or counterattacked. Ogre has enough special moves and throws to destroy an opponent without string attacks.

Finding the ideal attack range for your character is essential—Ogre is no different in this respect. His best attack range is just outside sweep distance, as this gives him enough space and time to use his special moves. If you consider the size of this character, it becomes obvious that fighting too close to an opponent is a bad idea. The quicker characters like Ling, Nina, and Jin are particularly good at attacking Ogre at close range, so stay back and let your power advantage win the game for you!

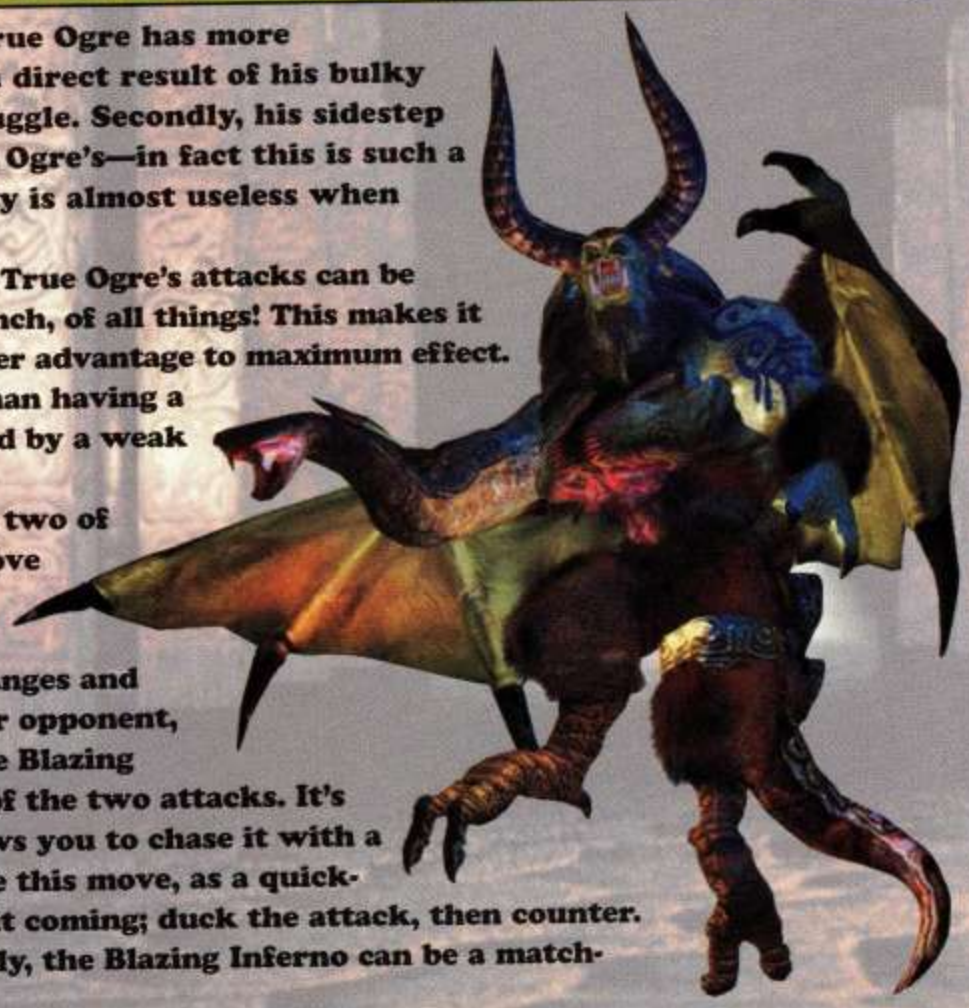
This is the "real" form that the God of Fighting takes on once you have destroyed his semi-human body. This gargoyle-like creature can use all of Ogre's moves. You can use the basic fighting style you developed as Ogre, then add the extra moves of True Ogre to your playing style, as you choose.

GENERAL FIGHTING STRATEGIES



Because of his sheer size, True Ogre has more weaknesses than Ogre! As a direct result of his bulky form, he's much easier to juggle. Secondly, his sidestep is much, much slower than Ogre's—in fact this is such a problem, the sidestep ability is almost useless when you play as True Ogre.

The final problem is that True Ogre's attacks can be stopped with a basic left punch, of all things! This makes it difficult to use his vast power advantage to maximum effect. Nothing is more annoying than having a mega-powerful move stopped by a weak punch.

Looking to the positives, two of True Ogre's extra moves prove to be extremely useful. The Hell's Flame and Blazing Inferno have huge attack ranges and cause lots of damage to your opponent, even if he or she blocks. The Blazing Inferno move is the better of the two attacks. It's cool first of all, plus it allows you to chase it with a juggle combo. Don't overuse this move, as a quick-thinking opponent can see it coming; duck the attack, then counter. Provided you use it sparingly, the Blazing Inferno can be a match-winner.

True Ogre's most effective attacking range—and the one you should keep him at, whenever possible—is just outside sweep distance. This is simply because he's so big, he requires plenty of space to perform his moves. Get too close and you'll have maneuvering problems, particularly when fighting fast foes like Nina and Ling. Because of his weaknesses, True Ogre has a hard time against certain opponents. Here are the most difficult line-ups, along with a few helpful hints.

TRUE OGRE VS KEY OPPONENTS

VS JIN KAZAMA

Getting close to Jin is bad news, as he'll quickly take you to pieces. Use distance moves like the Blazing Inferno and Hell's Flame to take him out from long range!

VS EDDY GORDO

Eddy's low, sweeping attacks cause True Ogre a few problems. The key to winning this match is to counterattack with power moves. However, you must have excellent blocking skill to gain the opportunities.

VS PAUL PHOENIX

To win this match, stay well away from Paul's Phoenix Smasher and Hammer Punch combo attacks. They take off so much damage, he'll have you on your back in seconds.

Nina, because she is no longer interested in her

The beautiful and deadly Anna Williams is Nina Williams's twin sister. Recently awakened after a 15-year sleep, Anna feels the need to help Nina and prevent her from becoming an assassin again.

Here Anna demonstrates one of her many throwing attacks. These moves inflict heavy damage and better yet, they cannot be blocked.

Anna's kicks are extremely powerful.

Anna Williams

This jumping kick utilizes Anna's speed and power. She dashes toward her opponent and nails them with a powerful two-footed kick.

Anna's Guard Breaker move can be used to set up your opponent for a big damage combo.

This is probably Anna's most powerful attack—the Power Blonde Bomb. It's executed by pressing →, →, RP + LP.

Meet Gon.... Gon is a feisty little dinosaur and the first secret character uncovered in *Tekken* 3. He's also exclusive to the PlayStation, so don't bother looking for him in the coin-op version! Gon first became popular in 1992 as the star of a Japanese comic book and he just got bigger from there, so Namco has included him as a special hidden fighter. These pages tell you how to uncover Gon and give some playing tips for the cute dino.

HOW TO FIND GON

Here's how you can make Gon selectable. You first need to access Tekken Ball Mode by uncovering all the main hidden characters. This involves completing the game with most of the ten regular characters, so only two question mark blocks remain on the character selection screen (the "Quick Select" version).

Choose Tekken Ball Mode from the main menu and choose a character as normal. Your first match will be against Gon on his seaside background. After you have beaten him and returned to the character selection screen, Gon's portrait will have appeared. The little dinosaur is now selectable—now only one question mark block remains!

GON'S FIGHTING STRATEGIES

Because of his tiny stature, Gon is not as easy to play. However, this makes Gon the perfect character to choose when you want to humiliate a friend with your *Tekken* 3 brilliance.

Throwing an opponent is obviously difficult for a character as small as Gon. His tiny arms give him hardly any reach, so he uses his mouth to throw his enemies! This means that you must be as close to your foe as possible—even if you're a half-step away, the throw won't connect. Likewise, Gon's punches and kicks have almost no range, so unless you're standing next to your enemy, forget about them—they simply won't reach their target.

Gon's best move is the Dino Breath. It has good range and knocks an opponent backward, which means you can follow up with a charging attack. This move should form the basis of your attacking strategy—if in doubt, use the Dino Breath!

Like Kuma, Gon has a move were he turns around and breaks wind at his opponent. This move is easy to perform and causes around 20% damage, so it can be useful. However, it has a very limited range, and if you miss you're wide open to a counterattack.

It's one of the toughest tasks in *Tekken* 3, but it sure is worth completing the game with Gon. You're treated to an excellent ending sequence that features Gon dashing around his island paradise—with a little help from some animal friends! This is one of the most entertaining FMV sequences in *Tekken* 3—well worth seeing.

You can use Gon's Dino Breath to attack your opponent from a safe distance.

He's the smallest character in Tekken 3 but Gon can leap up and attack enemies at their head height, as we can see in this picture!

This is Gon with the Wind. The dino turns his back to his opponent and blasts them with some wind!

Gon has very short legs, causing problems when he tries to attack with kicks.

Gon uses the sidestep technique to move around his opponent. His speed and size mean that he can be tricky to follow.

Failed experiments

The second secret character in *Tekken* 3 is the mysterious Dr. Boskonovitch, the scientist who invented the "Cold Sleep" process that was used to preserve Nina and her sister, Anna. He's also the man who helped Yoshimitsu years earlier; he remains a close friend of the mechanized space-ninja. Boskonovitch has a strange fighting style and takes some effort to master, but unlike Gon, he's a competitive character when played by a *Tekken* 3 expert. This section shows you how to uncover Doctor B. and has tips for beating him and playing as him.

HOW TO PLAY AS DR. BOSKONOVITCH

Dr. Boskonovitch is released after Tekken Force Mode is cleared 4 times. On the fourth time, a fifth stage will appear after the fourth stage boss; Dr. Boskonovitch is the boss for this final stage.

GENERAL FIGHTING STRATEGIES

Beating Dr. Boskonovitch is not an easy task because he leaps around the fighting area like no other character. If you imagine Lei Wulong's unique, staggering fighting style, but far more exaggerated, you've got an idea of what this guy fights like.

As soon as the battle starts, he drops down onto his back and rolls around on the floor, making him difficult to attack. Don't use a pounce move, as he'll counter with his toxic breath. Stand back and wait for him to roll toward you, then as he gets up, attack with the quickest, most powerful move you have—for example, in Paul Phoenix's case this is the Hammer to Power Punch combo. If you time the attack correctly, you cause plenty of damage. Now simply back off and repeat the process.

Paul uses his Phoenix Smasher to knock out Boskonovitch in real style. Paul's speed and power make him perfect for beating the mad doc!

Trying to move in and mix it with Boskonovitch is a waste of time, as his attacks are far too random and you'll take a beating. Stay back and attack when he approaches you.

When you play as Boskonovitch, make full use of his weird attacking style and vary your moves as much as possible. Your opponent will have a hard time working out what you're going to do next, as Boskonovitch's attacking style is one of the hardest to anticipate! Use this to your advantage, and Dr. Boskonovitch can be a good character to control.

Like others, Doctor B. has a second outfit.

Paul carefully moves in on the doctor, but he must be careful—Doctor B. can take you out in a second!

Dr. Boskonovitch knocks Paul to the floor with a backward-facing move that's difficult to avoid and even harder to block.

Boskonovitch's unpredictable fighting style makes him a fearsome opponent in Survival Mode.

As soon as a fight begins, Boskonovitch almost always falls to the floor and rolls around. This is his weird style—don't let it fool you!

In this ground attack, the doctor slides along the floor toward his opponent, attacking them as he does so.

This kick is similar to one used by Eddy Gordo. It inflicts lots of damage and juggles the enemy, so Dr. B. can follow up with a combo or special move.

a history of the tekken series

Namco, the PlayStation, and our favorite fighting game series are closely linked; the original *Tekken* coin-op hardware basically *was* Sony's console. Along with *Ridge Racer*—also from Namco—the home version of *Tekken* shot PlayStation sales through the roof, and the companies' mutual success has kept the awesome *Tekken* series exclusive to the PlayStation. Let's see how they all fit together.

TEKKEN

In terms of the PlayStation's evolution, the original *Tekken* is quite a time-tested game, having been released in the USA in November 1995, just two months after the console's debut. Almost everyone who bought an early PlayStation also bought one of this then-revolutionary fighting game—it was the first PlayStation title to sell over a million copies.

Graphically, *Tekken* still seems good. It seemed amazing at the time! The gameplay is relatively basic, with only around a dozen secret moves for each of the eight characters and the sub-bosses, and only minor variants of the main fighters. It's fun for a no-holds-barred, toe-to-toe fight, and along with Namco's *Ridge Racer*, probably the only early PlayStation game still worth playing.

The initial *Tekken* premise was a death-or-glory tournament focusing on a few important characters, while other fighters' roles and back histories would be explored in the sequels. Equally common for the series, the organizer of the event was also the final, most powerful, and inevitably evil combatant—*Tekken*'s Heihachi Mishima. As CEO of the Mishima Corporation, it was Heihachi who financed the tournament, with the ulterior motive of honing his mighty martial arts skills and sating his sadistic lust for power and destruction.

Aside from the obvious attraction of being crowned as the ultimate fighter, the incentive to compete in the world's most brutal martial arts contest was reputedly the largest cash prize ever offered for such an event. Marshall Law wanted the money to start a kung fu dojo and King, a wrestler, aimed to open an orphanage; the robotic crime boss Yoshimitsu didn't even intend to win—he just wanted to distract everyone while his hoods would steal the cash!

However, the remaining five competitors entered the "King of Iron Fist Tournament" (AKA the "Tekken Tournament") for revenge of some kind: Kazuya Mishima wanted to settle the uncomfortable relationship he had with his father, Heihachi; Paul Phoenix, a bodyguard and street fighter, tied in a fight with Kazuya and wanted to settle the score; the cyborg Jack was sent to prevent Kazuya's planned military coup; Michelle Chang's father was killed by Heihachi's men; and someone hired Nina Williams to assassinate Heihachi. As shown in his FMV end sequence, it's Kazuya who ultimately defeats Heihachi, dropping his father's limp body over a cliff!

WHO'S THE BOSS?

Kazuya took over the Mishima Corporation and also the Tekken Tournament. Two years after the original event, he attracted 10 fighters from all over the world by offering 10 times the prize money! Again, the majority of them had darker motives; only King and Paul entered for glory and winnings. Jun Kazama worked for a wildlife protection organization and wanted to arrest Kazuya, who had been smuggling animals. He was also linked to the Mafia, so number-one Hong Kong detective Lei Wulong was out to bust him.

Kazuya wanted the secret held in Michelle's necklace, so he kidnapped her mother to entice the fighter to him. He also holds Boskonovitch, Jack-2's creator, who once saved Yoshimitsu's life, so they too were drawn into the fight.

Sub-boss characters play a part in some of the storylines. Before the tournament, Baek Doo San wreaked havoc at Marshall Law's dojo, so Law wants payback. Although she's been hired to kill Kazuya, Nina also entered because of her sister's presence. There's fierce sibling rivalry between Nina and Anna Williams which dates back to their father's death. Ironically, Anna was at the "King of Iron Fist 2" to protect Kazuya from Nina!

Their importance and personalities boosted since the original game, other sub-bosses had interesting motives. Wang Jinrey worked for the Mishimas but disapproved of the turn the corporate family had taken; along with his star pupil, Lee Chaolan—Kazuya's adopted brother—he intended to restore his honor. A man called Bruce Irving is a pupil of Kazuya's. Ex-sumo wrestler Ganryu wants to win the prize money so he can impress Michelle with his own wrestling arena!

After Heihachi's defeat, his pet bear, Kuma, escaped into a nearby forest. Immediately before *Tekken* 2, Kuma was a training partner with...Heihachi! He was one of 10 main fighters, hoping to regain his rightful place as leader of the Mishima Corporation and King of Iron Fist.

TEKKEN 2

There was just nine months' wait between the original and the American release of *Tekken* 2 in August 1996—and what a hot-looking baby it is! It was probably the best-looking fighting game on the PlayStation—until *Tekken* 3 arrived! More detailed and realistic characters moved smoothly over atmospheric backgrounds; a major improvement over the original.

Gameplay was much more involved, too, with characters having at least twice as many moves, plus devastating 10-hit combos. Some characters had multi-part throws and even reversal moves to turn the tide on an attacking enemy.

And what enemies there were! The basic line-up of 10 fighters included old favorites plus Heihachi, Marshall Law, Jun Kazama, and Lei Wulong. Each had their own sub-boss that became playable, many of which were distinct from their associated nemesis, plus there were three versions of Kazuya (standard, Angel, and Devil) and two secret characters—a kangaroo and a huge lizard! Do a little math and you discover that, with time and effort, there were a staggering 25 selectable fighters! That's been enough to keep people playing for over a year and a half, but now *Tekken* 3's here!

HEIHACHI'S DEVIOUS SCHEMES

Again, the final battle was Kazuya versus Heihachi. This time it was the father who was victorious, although it was a hard-won fight: Just when Kazuya seemed defeated, he returned. When Kazuya fell a second time, Heihachi disposed of the body in an active volcano.

Back in control, Heihachi Mishima was more power-crazed than ever. He formed an elite band of soldiers—dubbed "Tekken Force"—and sent them on a peace-making crusade. They scoured the globe, tipping the balance of small wars and quelling rebel factions—generally using military force to restore order. Heihachi also helped developing nations to sustain their agricultural growth. He wasn't acting out of the goodness of his heart—this was for Heihachi's satisfaction and to gain the confidence of the world's leaders. Heihachi had set plans in motion that could finally satisfy his megalomania.

A History of the *Tekken* Series

His slow but sure plans to earn the trust of the world came to an abrupt halt around 15 years later by his own unwitting hand. Heihachi directed Tekken Force to aid an excavation in Central America, where they discovered a strange creature. Excited, he ordered them to capture it, but soon after learning its identity—Ogre—Heihachi lost radio contact. He rushed to the archaeological site to find that his Tekken Force had been slaughtered.

Now four years later, many fighters from all over the world are missing, some of them associated with the Tekken Tournament. One of these is Jun Kazama and one thing is confirmed when Jun's abduction is witnessed by her son, Jin: Ogre is to blame. Jin has only just learned that his father was Kazuya Mishima but goes to his grandfather, Heihachi, to learn how to fight—he wants revenge.

Heihachi organizes the "King of Iron Fist Tournament 3," believing this gathering of top combatants will prove irresistible to Ogre. He's more interested in controlling the soul-absorbing creature's power, however, than merely destroying it....

The other competitors are an odd bunch, comprising of the offspring or successors of established *Tekken* characters, veteran combatants—either aged or preserved by high technology—and new characters who have reason to hate Ogre or Heihachi. For the moment, at least, who will be champion of the third Tekken Tournament is up to you!

NAMCO

When Namco's roots were planted in 1955, no one could have dreamt of the technological wonder of video games that would be produced a few decades later. As Nakamura Manufacturing Ltd, the Tokyo company installed rocking-horse rides on top of a department store. Four years later, it was renamed Nakamura Manufacturing Co, Ltd, a small change but one that would later allowed the name to be shortened to "Namco."

Rocking-horse rides were Nakamura Manufacturing's mainstay with a new production department boosted in 1963 by a deal that allowed it to use Disney characters. With the acquisition of the Japanese division of Atari in 1972, the Namco brand name was born. Five years later, the company itself became Namco Ltd. That same year, it produced *Shoot Away*, a classic early arcade game where a rifle-style lightgun was used to shoot skeets on a large white screen.

The first Namco video game was *Gee-Bee* in 1978, and the next year it had its first hit, *Galaxian*. However, the biggest initial gaming success of Namco was *Pac-Man* (1980), the hungry yellow guy who avoided ghosts in a maze... until he could find a power pill and turn the tables! *Pac-Man* was a worldwide phenomenon, introducing many people to video games, particularly those who shunned the violent nature of many of them. Namco also revitalized the racing game—its *Pole Position* being the most true to life anyone had seen in 1982.

Between less noteworthy games, Namco was very busy. Among other things, it acquired an Italian restaurant chain, established the New Technology Foundation, created a simulator for traffic safety education, and built a theme park called Wonder Eggs (the revamped version is seen as a *Tekken* 3 background) and an entertainment complex, Wonder City.

The *Ridge Racer* coin-op was released in 1993 and converted to PlayStation the next year. Home sequels *Ridge Racer Revolution* and *Rage Racer* have been a part of the big success of an exclusive PlayStation conversion deal, similar to the one Namco had with Nintendo Entertainment System in the mid-1980s. The *Tekken* coin-op (1994) ran on System 11, an arcade board co-developed with Sony Computer Entertainment and very similar to its PlayStation hardware, so it was easily converted for home release in 1995. Coin-op sequels arrived in 1995 and '96, PlayStation versions in 1996 and now 1998.

Hot new games like *Ace Combat 2*, *Time Crisis*, *Soul Blade*, and *Beastorizer* kept Namco at the top and gameplayers occupied while they waited for *Tekken* 3. Now that Namco has joined Sony and Polygon Pictures to produce computer graphics-based movies, FMV intro-style, maybe one day we'll see *Tekken* at the cinema, too!
