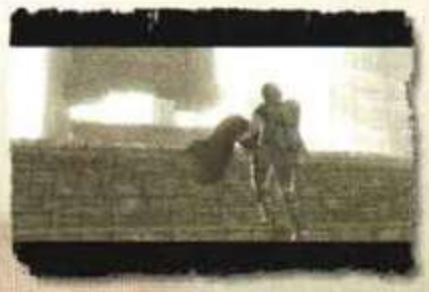
PROLOGUE



That place... began from the resonance of intersecting points... They are memories replaced by ens and naught and etched into stone. Blood, young sprouts, sky—and the one with the ability to control beings created from light... In that world, it is said that if one should wish it one can bring back the souls of the dead... But to trespass upon that land is strictly forbidden.

Welcome to the World of the Colossi

Your journey begins with a desperate young boy. He has traveled far on horseback carrying the limp and lifeless body of the one he loves more deeply than life itself. Her fate was cursed and she was sacrificed.

The path the boy has chosen delivers him to a shrine inside the boundaries of a forbidden land, where a strange, enigmatic being offers him the chance to reclaim his beloved's soul and return her to the living. If this young mortal can seek out and defeat sixteen Colossi that exist in the land beyond the shrine, then the mysterious being, Dormin, will fulfill his urgent request. Without a second thought, the boy agrees, and embarks on what is surely to be a dangerous yet incredible adventure you'll not soon forget.

ESSENTIALS

LIVING IN THE WORLD OF THE COLOSSI

Consider this guide your constant companion as you venture through the dangerous world of the Colossi. The walkthrough provides you with basic and advanced strategies for locating and defeating each of the sixteen gigantic beasts. The Essentials details the basics to get you started on your way.

Controlling the Boy

Controlling your nimble character on screen is a breeze, and if you haven't played ICO, the developers' previous title, then his fluid movements and lifelike animations are sure to amaze you.

MOVEMENT ON FOOT

Left analog stick	Movement
Right analog stick	Camera control
R3 (when walking/running)	Sneak/walk carefully
R3 + △ (when walking/running)	Forward roll
△	Jump (the longer your hold down the button, the higher or farther you can leap)
R3 (hold)	Grab (when jumping next to a surface that can be grabbed and held on to)
△ (hold) + R3 (hold—when grabbing onto an object) + left analog stick in the direction you want to leap (then release)	Leap from one ledge or area to the next. If you don't press any direction, your character will leap upward
✕	Call/whistle for Agro (hold to look in his direction)
○ (hold)	Raise sword
L3 (hold)	Gaze at the colossus

MOVEMENT ON HORSEBACK

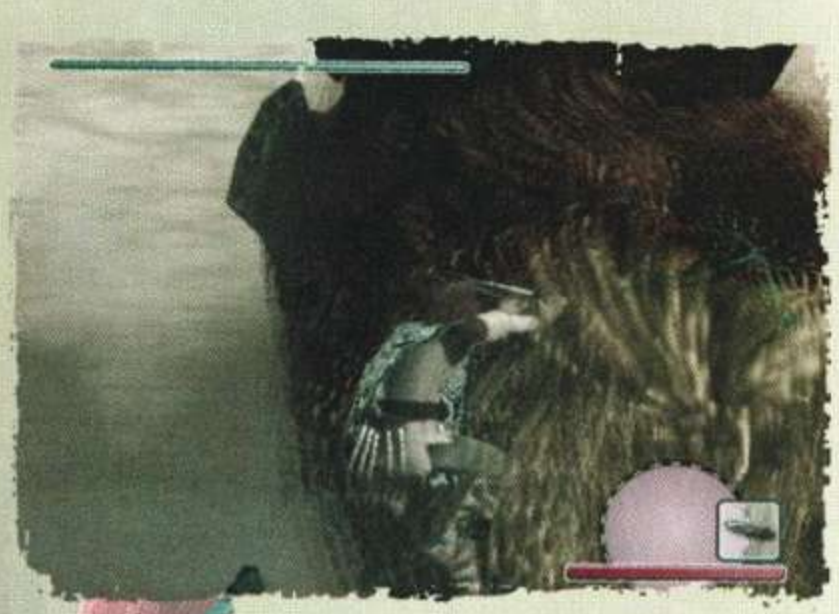
Left analog stick	Movement
Right analog stick	Camera control
△ (when standing next to Agro)	Mount horse
△ + R3	Jump and grab onto horse
✕	Kick/spur horse
Down on left analog stick + ✕ (from a standstill)	Quick gallop
Down on left analog stick + ✕ (from a gallop)	Quick stop
Down on left analog stick + ✕ (from a gallop) two times in a row	Quick turn around
Up on left analog stick + ✕	Stand on horse
R3 + △ (hold) + left or right on left analog stick	Side saddle
○	Raise sword
R3	Duck
L2	Zoom camera
○ (with no weapon equipped)	Pet horse

MOVEMENT IN WATER

Left analog stick	Movement
Right analog stick	Camera control
△	Jump out of water
R3	Hold your breath/swim underwater
L3	Gaze at the colossus

Grabbing and Climbing

Throughout the adventure, you are constantly challenged to find a way to get up, over and around environmental objects, as well as on top of the massive Colossi. This is typically accomplished by grabbing and climbing specific surfaces and ledges. When it comes to the Colossi, it's their fur. Always look for the furry patches of their gigantic bodies, as these are the areas that hide their weak points, allow you to hold on for dear life, and provide access to other parts of their bodies. You can keep your hold on their fur, no matter how violently the Colossi try to shake you off, so long as you have stamina remaining in your Stamina Meter. To grab, first jump toward the surface you want to hold by pressing ●, then hold R1 to grab it. You can also use the "Grab" button (R1) to grab hold of ledges, and other climbable surfaces, such as moss and ivy.



Strength and Stamina

Bringing down a Colossus requires a large amount of strength and stamina. Whenever you are required to execute an action that requires a great amount of stamina, such as grabbing and holding on to an object, or holding your breath under water, a circular Stamina Meter appears in the bottom right corner of the screen. As you cling to and climb up objects and the Colossi, as well as swim under water, your Stamina Meter slowly drains. When the pink circle inside has completely disappeared, you lose all your strength and are longer be able to hold on, or hold your breath. The only way to regain stamina is to find a place to rest by releasing the Grab button. When you are at rest, your health also slowly replenishes. As you progress through the adventure, each time you defeat a Colossus, your Stamina Meter increases in size.

Locating the Colossi

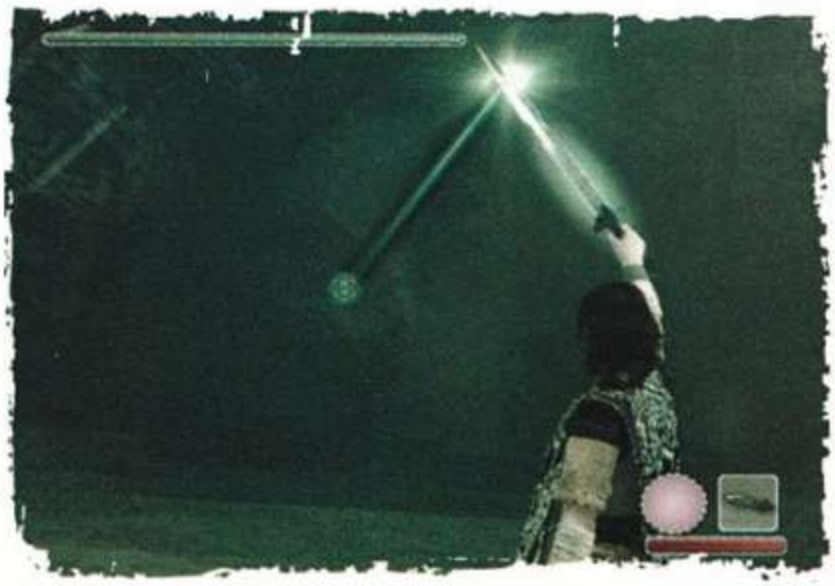
While the focus of the game is defeating these strange and brutal creatures, a good part of the game is comprised of tracking down each one. You are in the middle of a vast landscape that reaches out as far as the eye can see. Oftentimes, these Colossi are cleverly tucked away in hard to find—and reach—areas. Thankfully, the Ancient Sword has magical properties that aid you in your quest to locate the Colossi. By raising your sword high in the air and catching the rays of the sun, the light is reflected off its blade and pointed in the direction of the beast you must conquer. To use it properly, hold down ◉ and use the left analog stick to move the sword around until the light becomes concentrated

and reflected toward your goal. You will also feel a strong vibration in your controller when you are pointing in the exact direction of the Colossus you seek. The sword only works in areas where there is sunlight and it can be used both on foot and on horseback.

In addition to revealing the path to the Colossi, the sword's magical properties allow you to pinpoint the beasts' weak spots. If you raise your sword in the air and aim it toward Colossus I's left hind leg, your controller will vibrate and concentric circles will emanate from the spot in the center that can be exploited—this is where you need to focus your attacks.

Your horse: Agro

By your side whenever possible, Agro is your constant and faithful companion during your quest for the Colossi. To mount Agro, approach him and press △. Pressing △ when on the horse allows you to dismount it. Once mounted, you can steer Agro with the left analog stick, kick him to make him move by pressing ✕ (press multiple times to make him gallop), and stop him/make him back up by pulling back on the left analog stick. If you become separated from Agro, you can call him to you by pressing ✕ when dismounted. If you are nearby, you will call or shout out to him. If you are far away, you will whistle. Holding down ✕ when calling Agro will turn your head in the direction from which he will be coming. Agro has more advanced moves that aren't readily apparent. You can find these listed in the Contolling the Boy section in this chapter.



Combat

Combat in Shadow of the Colossus is not carried out in the typical sense. While you do have a sword and can strike and stab at your enemies, the only time when this is absolutely necessary is when you are attacking one of the Colossi's markers—weak spots that must be stabbed repeated times until they disappear. You have only two weapons at your disposal through most of the game—the Ancient Sword and the Bow and Arrow.

ANCIENT SWORD

To plunge your sword into a Colossus' weak point, equip the sword (cycle through your weapons using ✣ and ✣), press ● to pull back your weapon and ready a strike, then press ● a second time to attack. The longer you charge-up your sword by keeping it in the ready position, the stronger your attack will be. Once the controller begins to vibrate you know the strike is fully charged. However, the longer you wait to strike, the greater the risk you may lose the opportunity, as the Colossus is able to shake you out of it and ruin your opportunity, as well as cause you to lose stamina.

BOW AND ARROW

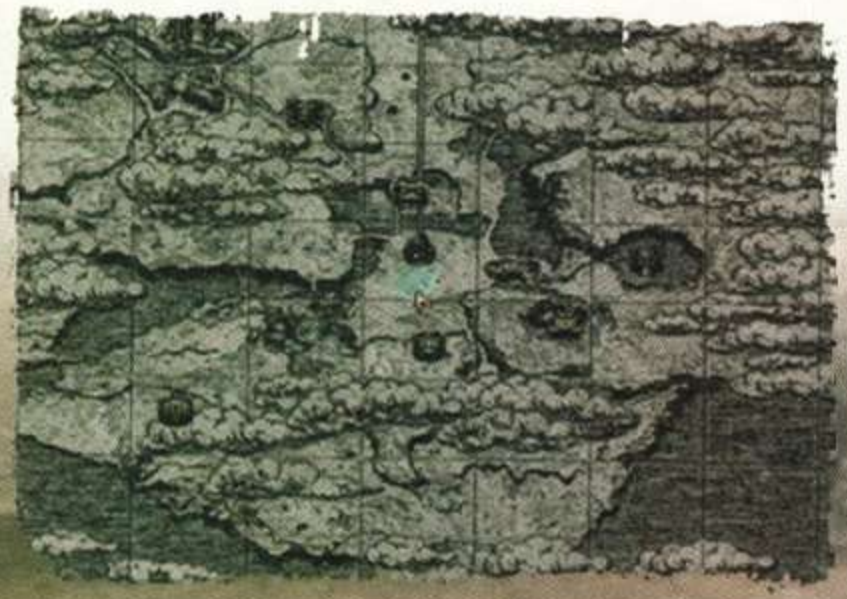
The bow and arrow aren't strong enough to fell a Colossus, but they prove handy time and time again as a means to get their attention or used in a way to gain access onto one of the beasts. To use the bow and arrow, equip it, then press and hold ● to draw back the bowstring and ready a shot. A targeting cursor appears on screen, which you can aim using the left analog stick. As with the sword, the longer you hold down ●, the stronger the attack. Release ● to shoot the arrow.

Save Altars

There are Save Altars, glowing stone monuments that allow you to save your progress as well as heal your wounds, scattered throughout the land. To save, approach an altar and press ● to pray in front of it. When you reload your game or die, you start at the last point at which you saved your progress.

The Map

Press ► anytime during gameplay to pull up the Map. The Map is an essential tool to help guide you through the landscape and locate the Colossi. Grid-based, you can refer to it at any time to view the path you've taken to reach a Colossus (a dotted line follows the path you take and marks your progress from the starting point at the shrine until you reach the Colossus). The Map also displays each Colossus' location after it has been defeated, as well as any Save Altars uncovered and used throughout the land. Once in the Map screen, use the left analog stick to move the Map's viewing area, the right analog stick to zoom in and out, and ▲ to back out.



Healing and Strength Items

FRUIT

Certain trees in and around the environment bear fruit. This fruit, when eaten, restores a small portion of your character's health, as well as slightly increases your Health Meter. You can shoot fruit from down from the trees using the bow and arrow.

LIZARD TAILS

You may frequently notice small lizards scurrying about the landscape. Certain kinds, mainly the white-tailed lizards, can grant you extra stamina by slightly increasing your Stamina Meter when you eat their tails. Use the bow and arrow to shoot these white-tailed lizards, which are most commonly found around Save Altars, then pick up and eat the tails they leave behind.

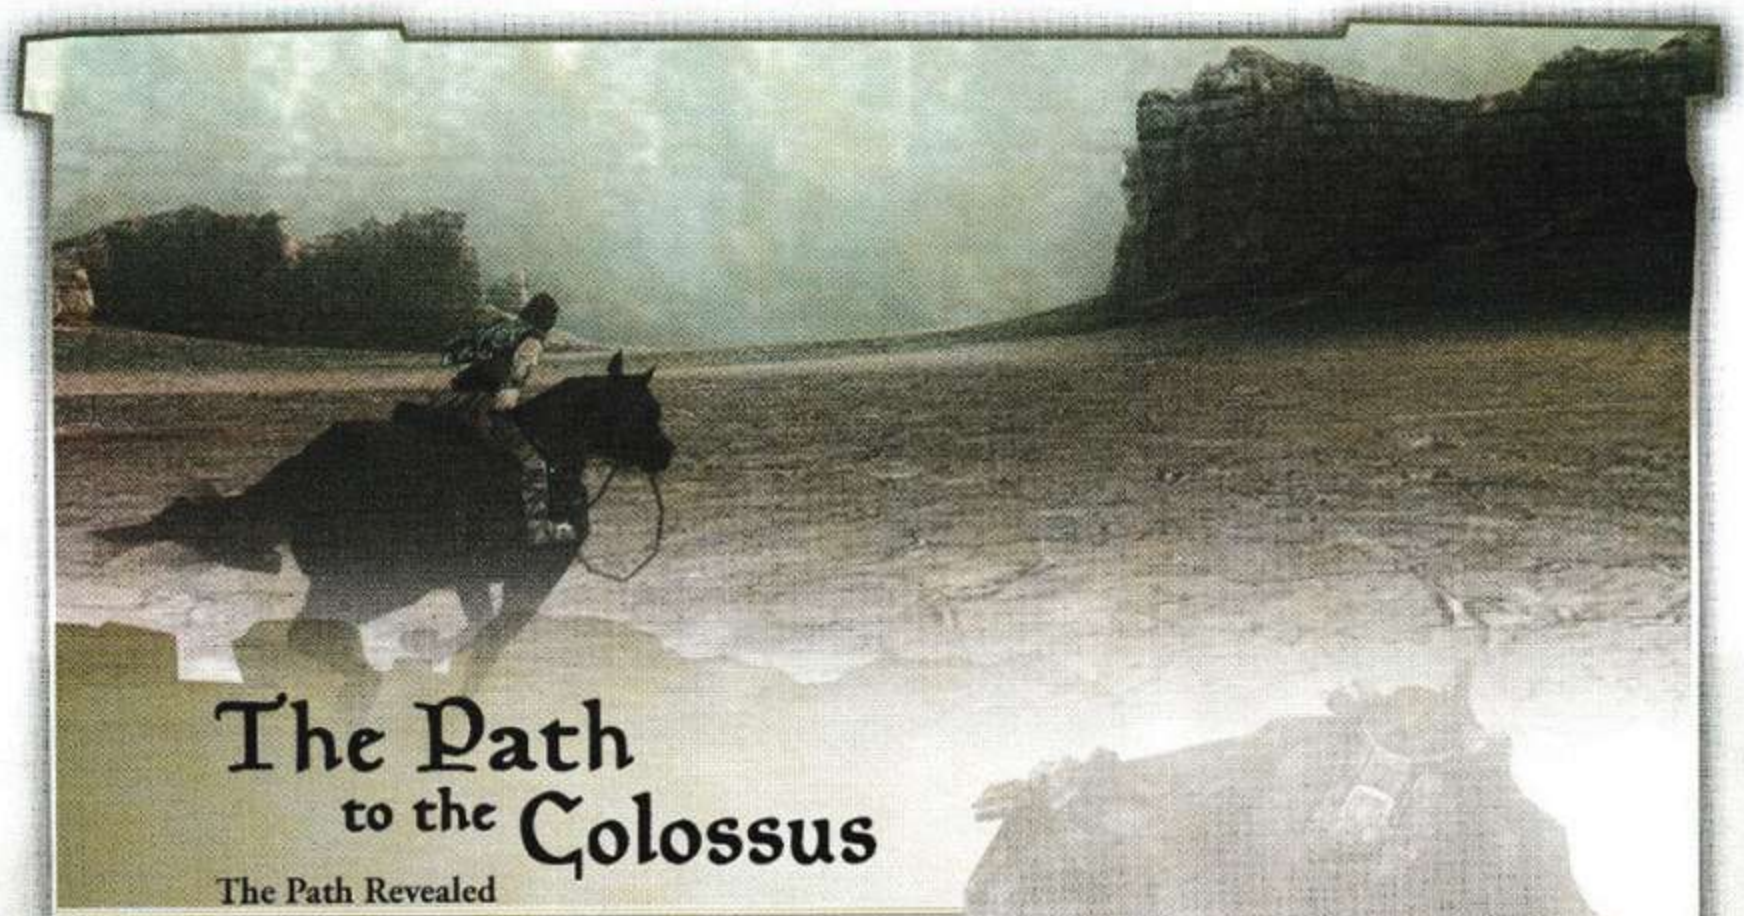
COLOSSUS I



The Path to the Colossus

The Path Revealed

Map Location: 5F

Raise thy sword by the light and head to the place where the sword's light gathers. There, thou shalt find the Colossi thou art to defeat... Now, be on thy way.

1. Use the sword to discover the path.

2. Ride Agro south toward the foothills at the canyon wall.

3. Climb the grassy wall to the right.

4. Leap the gaps.

5. Duck and roll under the fallen column.

6. Grab, climb and leap up to the top of the canyon.

A Desperate Plea

The impossible and daunting challenge the powerful being Dormin has put before you can only be fulfilled with the Ancient Sword. In order to bring back your beloved's soul, you must destroy all 16 Colossi—incarnations of the stone idols lining the shrine's walls.

Agro

By your side whenever possible, Agro is a constant and faithful companion during your quest for the Colossi. To mount Agro, approach him and press △. Pressing △ when on the horse allows you to dismount. Once mounted, steer Agro with the left analog stick, kick him to make him move by pressing ✕ (press multiple times to make him gallop), and stop him/make him back up by pulling back on the left analog stick. If you become separated from Agro, call him to you by pressing ✕ when dismounted. If you are nearby, you will call or shout out to him. If you are far away, you will whistle. Holding down ✕ when calling Agro turns your head in the direction from which he will arrive.

The Journey Begins

Seeking out the Colossi can sometimes be as challenging as destroying them. While locating each Colossus starts out easy enough, as you continue through your quest they become progressively harder to reach.

USE THE HORSE

The Colossi are spread out wide across the land, which is vast. To cross the landscape quickly, ride atop Agro, your trusty steed.

You must leave behind your beloved for now. Hop on Agro and exit the shrine by riding down the steps on either side of the pyre. Before leaving to locate the first Colossi, dismount and save your game at the glowing Save Altar set in the shrine wall.

SAVE ALTAR

These glowing stones are Save Altars, which allow you to save your progress, as well as heal your wounds. To save, approach an altar and press ◉. Save Altars are found in a variety of locations in and around the environment.

When you're ready to set out, head due south toward the foothills in the distance. The path takes you between a small outcropping of rocky hills. The first Colossus is at the top of a canyon cliff not far from the shrine.

The Power of the Ancients

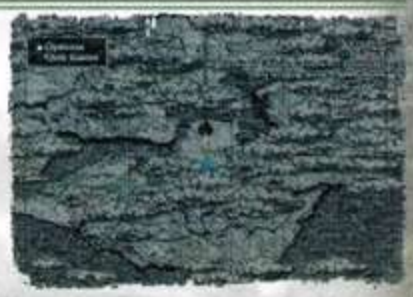
POWER OF LIGHT, PART I

Your Ancient Sword has magical properties that will aid you in your quest to destroy the Colossi. By raising your sword high in the air and catching the rays of the sun, the light reflects off its blade and points in the direction of the beast you must conquer. To use it properly, hold down ◉ and use the left analog stick to move the sword around until the light becomes concentrated and reflected toward your goal. This is accompanied by vibration in your controller when you are pointing in the exact direction of the Colossus you seek. The sword only works in areas where there is sunlight but it can be used both on foot and on horseback.

Using the sword, you should be able to reflect the sun's rays as a guide to lead you to the general area of the first Colossus. Follow the reflected rays until you reach the small canyon between these mountain cliffs.

REFER TO THE MAP

You can press ► at any time during the quest to display the Map and your current location.



Map

The Map is an essential tool to help guide you through the landscape and locate the Colossi. Grid-based, you refer to it at any time to view the path you've taken to reach a Colossus (a dotted line follows the path you take and mark your progress from the starting point at the shrine until you reach the Colossus. The Map also displays each Colossus's location once it's been defeated, as well as any Save Altars uncovered and used throughout the land. Once in the Map screen, use the left analog to move the Map's viewing area, the right analog stick to zoom in and out, and the ○ button to back out.

The Ascent

A small set of dilapidated stairs leads to what looks like an impasse. Dismount the horse and approach the mossy-covered canyon wall.

GRABBING AND CLIMBING

Even if you find your progress seemingly blocked, there's always a way. In this instance, climb up to the ledge above by grabbing the overgrown, craggy surface of this wall. First jump toward it by pressing ○ then hold R1 to grab it. You could use the R1 "Grab" button to grab ledges and cling to climable surfaces on the Colossi.

STAMINA METER

Whenever you are required to execute an action that requires a great amount of stamina, such as grabbing and holding on to an object, or holding your breath under water, a circular Stamina Meter appears in the bottom right corner of the screen. As you cling to and climb up objects and the Colossi, as well as swim under water, the Stamina Meter slowly drains. When the pink circle inside has completely disappeared, you lose all your strength and are no longer be able to hold on, or hold your breath. The only way to regain stamina is to find a place to rest by releasing the Grab button.

Once you've climbed up to the ledge, press ○ to hoist yourself over and follow it to the left, leaping over the gap. You can jump up and grab the next ledge and continue back toward the right.

DIVING ROLL

Use a dive roll to skirt underneath objects and also take evasive action. To do so, crouch holding L1, then press ▲. You must do so to get past this fallen column.

LEAPING WHILE GRABBING

Oftentimes you are required to leap from one area to another while holding on to a ledge, crevice or even Colossus. You can do so by holding down ▲ (while continuing to hold L1) and pressing the left analog stick in the direction you want to leap. When you're read to make the move, let go of ▲.

Jump and pull yourself up to the next ledge, then position yourself so that you're standing in front of the small wall. From here, jump up, grab and hoist yourself up to the next level, then jump and grab the ledge to the left. In order to get across the gap around the other side, you must find a way to leap across.

Shimmy around to the left of the ledge toward the gap. Once your back is to the ledge beyond, hold ▲ and press in the direction of the ledge to your back. Let go, and you leap across and grab the ledge across the way. The first Colossus is found at the top of the ramp.

COLOSSUS I

Roaming the canyon tops, the first Colossus is a huge, lumbering beast that carries a giant stone hammer. Like all of the Colossi, it has an Achilles heel that can be exploited to help you destroy it.

WEAK POINTS

Hind left leg, top of head.

REST SPOTS

Platforms on lower and mid back, shoulders.

PREFERRED PATH

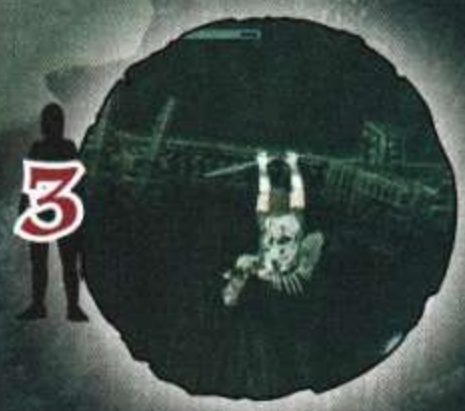
1. Jump and grab the left leg, plunge the sword into the glowing marker on its calf at least twice to drop the Colossus to its knee.

2. Jump up and grab the armor around its back leg, then climb up to its lower back.

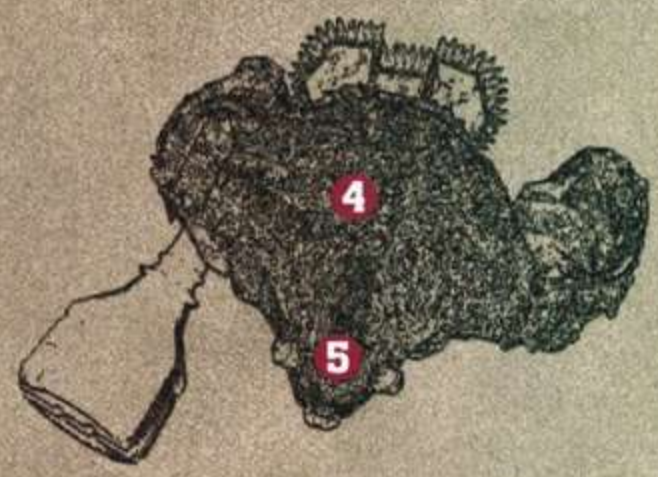
3. Use the platforms at its torso and middle back to rest and regain stamina before continuing to climb.

4. Continue the ascent up the beast's back until you reach its head.

5. Locate the Colossus' second glowing marker, then attack it until you bring down the beast.



COLOSSUS I



THE BATTLE BEGINS

At the top of the canyon, the giant ambles by your position. In order to destroy it, you must first find its weak spot. Without hesitation, chase it down and run for its left hind leg.

POWER OF LIGHT, PART II

In addition to revealing the path to the Colossi, you can use your sword's magical properties to pinpoint weak spots. If you raise your sword in the air and aim it toward the beast's left leg, the controller will vibrate and concentric circles will emanate from the spot in the center that can be exploited—this is where you need to focus your attacks.

As soon as you have caught up with it, jump and grab onto its left leg, being careful not to get crushed underneath.

GAZE AT THE COLOSSUS

You can "Gaze at the Colossus" and keep the camera aimed at the giant behemoth by keeping L1 held down. As long as the button is held down, the camera centers on the Colossus.

When you get close to the creature, use your sword to pinpoint weak spots and areas that may aid you in some way to bring it down. Take a moment from a safe distance to raise the sword and sweep over it.

GRAB THE FUR AND STONE LEDGES

You can only grab, hold on to, and climb certain surfaces. When it comes to the Colossi, it's their fur. While some Colossi have stone ledges, always look for the furry patches of their gigantic bodies, as these are the areas that hide their weak points, allow you to hold on for dear life, and gain you access to other parts of their bodies. You can keep your hold on their fur, no matter how violently a Colossus tries to shake you off, so long as you have stamina remaining in your Stamina Meter.

Hold on and don't let go—it tries its best to shake you off. The moment it stops shaking its leg, attack! Press ● to pull back your weapon and ready a strike, then press ● a second time to plunge your sword deep into its flesh.

STAB ATTACK

The longer you charge-up your sword by keeping it in the ready position, the stronger the resulting attack. The controller begins to vibrate when your strike is fully charged. However, the longer you wait to strike, the greater the risk you may lose the opportunity, as the Colossus is able to shake you out of it and ruin your opportunity, as well as cause you to continue to lose stamina.

As soon as the Colossus is down on its knee, quickly jump and grab onto the armor around its thigh and start climbing its torso toward its back. Maneuver toward the left or right of the torso in order to hoist yourself up to the platform at the base of its back.

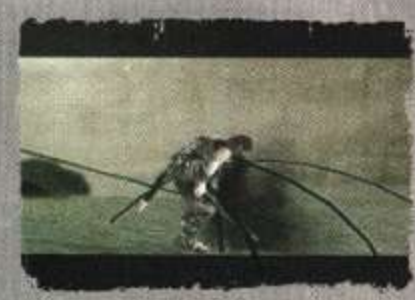
REST SPOT

Use the two sets of platforms located at the lower and middle portions of the creature's back to rest and regain your stamina.

Once your Stamina Meter has completely refilled, make the final push up the beast's back, over its shoulder blades and to the top of its head. The second weak point is found here.

Hold on for dear life and plunge your sword into the spot. The longer you can safely charge up your attack, the more damage is inflicted. If you find that your Stamina Meter is getting dangerously close to being depleted, take a break and quickly climb back down to the shoulder blades.

After a series of strikes, the first Colossus is defeated, dropping to the ground with a booming sound. Before you can get away, ethereal tendrils shoot out from the beast's dead carcass and pierce your soul. Blackness follows.



COLOSSUS II

The Path to the Colossus

The Path Revealed

Map Location: 3F

Thy next foe is in the seaside cave. It moves slowly... Raise thy courage to defeat it.

1. Use the sword to discover the path.

2. Ride Agro north between the broken stone arches.

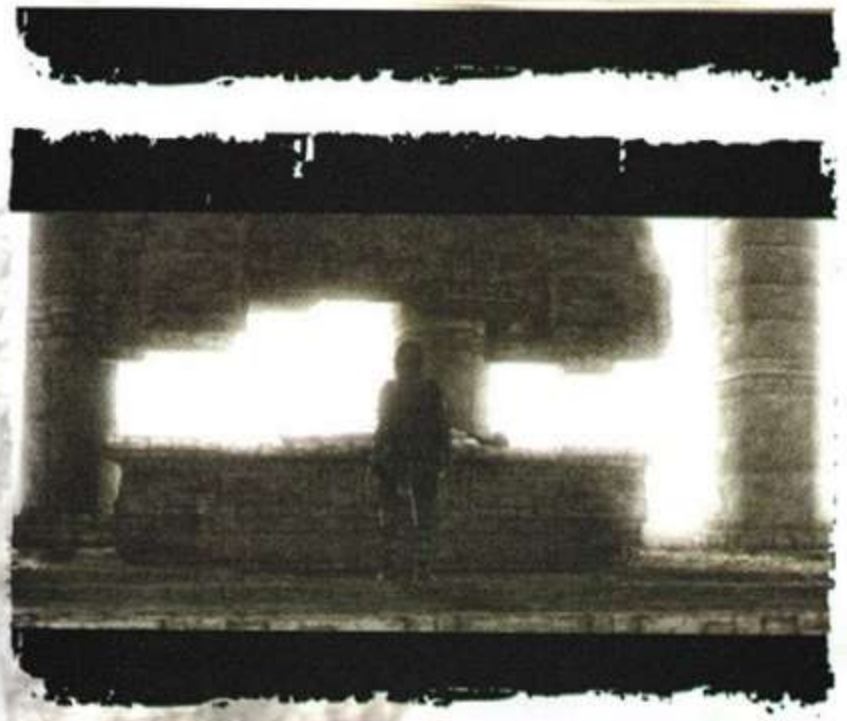
3. Cross the ancient bridge.

4. Take the sloping, right hand path down into the canyon.

5. Follow the right canyon wall to the cave entrance.

A Rude Awakening

You awake with a terrible feeling in the pit of your stomach. Realizing somehow you've been returned to the shrine, you return to the side of your beloved. A loud rumbling from across the chamber heralds the explosion of the first of 16 idols. Perhaps this will work after all. Dormin speaks and your next task is set before you.



CALL AGRO

Every time you fell one of the Colossi, you wake up back in the shrine. Unless completely unable, your loyal horse, Agro, always stays by your side. Press ✕ and keep it held down to call to him.

To Find the Second Colossus

According to Dormin, the next Colossus is found in a seaside cove. Hop on Agro and use the Sword of the Ancient to pinpoint its general direction, which is due north of the shrine.

RELY ON THE MAP

Remember to glance at the Map every so often to get your bearings. It also displays the locations of the Colossi, once they've been defeated.

Keep the sword held high until you have a strong vibration and are moving in the right direction. The path to the Colossus leads between a pair of dilapidated stone arches, then across an ancient stone bridge.

Down at the bottom of the canyon to the right is a cave opening set in the cliff wall. This is your ultimate destination and where to find the next Colossus.

Follow the path all the way down into the cove below, then follow the right canyon wall to arrive at the next destination—the cave dwelling of the beast.

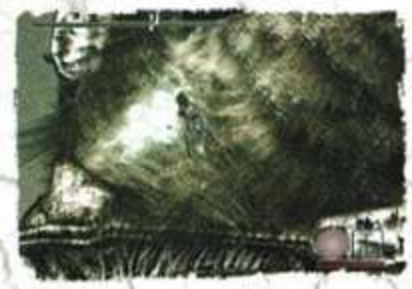
Down into the Mouth of the Beast

On the other side of the bridge, the path splits in two. The straight path opens back up into open plains. The right path slopes down into the canyon. As you approach this juncture, the camera cuts to the cave entrance below, indicating that the right path is the one you need to take.

COLOSSUS II

A booming vibration ripples across the canyon floor accompanied by a crashing cacophony of rock and rubble. Out of the ruins comes a giant head followed by a massive body walking on all fours. With no weapon to speak of, it relies on its massive hooves to stomp and smash those who dare disturb its slumber.

WEAK POINTS



Bottom of hooves, tailbone, top of head

REST SPOTS

Bone fragments on front shoulder blades and hindquarters

PREFERRED PATH

1. Get the Colossus' attention by running in front of it.

2. Use your bow to shoot an arrow at the underside of its hoof to cause it to fall over in pain.

3. Grab hold and climb up the side of its crippled leg before it can right itself.

4. Climb up its leg and rest on the cartilage protruding from its shoulder.

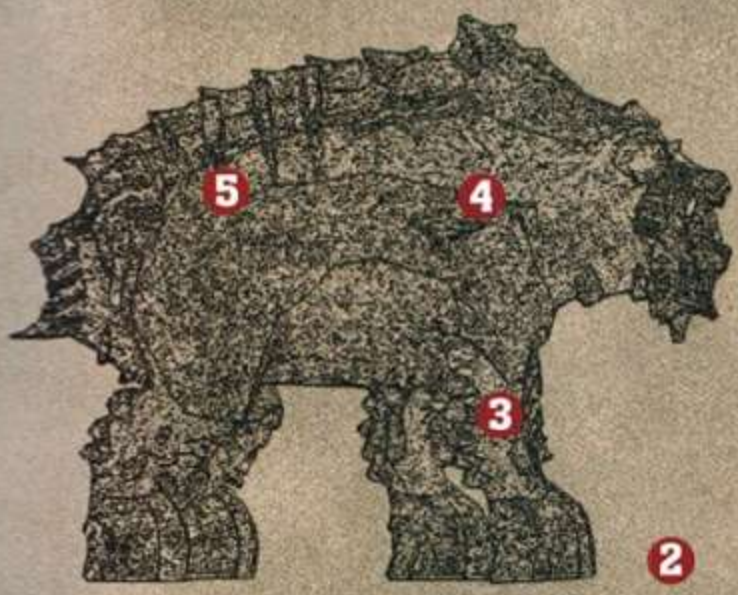
5. Continue to climb along the length of the creature toward its hindquarters.

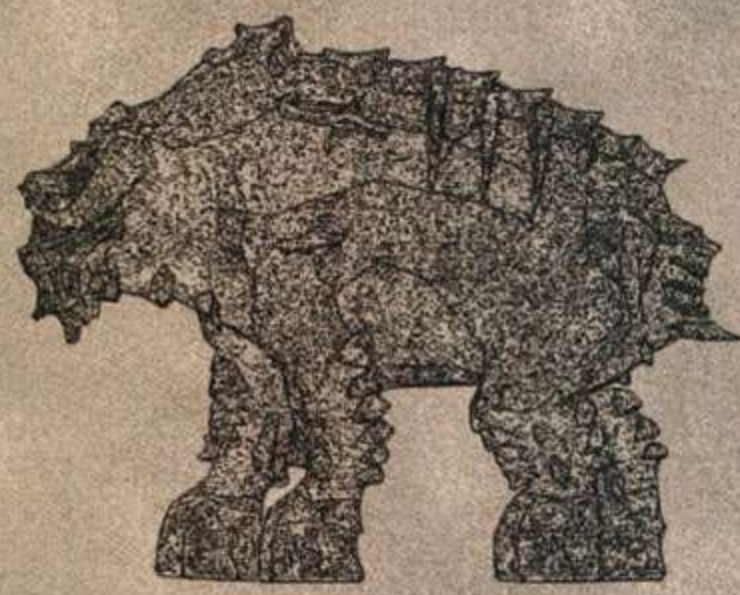
6. Stop to rest at the bone shelf above its rear legs, then attack the marker on its tailbone.

7. Carefully jump and climb over its vertebrae and move toward the second marker located on its head.

8. Stab the second marker at the top of its head until the Colossus has been felled.

COLOSSUS II





THE BATTLE BEGINS

The Colossus attacks immediately, attempting to crush you underneath its massive hooves. Don't waste any time! Dismount from your horse and quickly put some space between you and it by running in the opposite direction.

As soon as you are standing in front of it, stop and hold your ground. Quickly switch to your bow and arrow and prepare to shoot at the only exposed vulnerable spot you can see: the glowing underside of either of its hooves.

STAY AHEAD OF THE COLOSSUS

Gazing at the Colossus helps you determine where its head is, as you must get in front of the Colossus for it to rear back on its hind legs and expose its weak points on the underside of its hoofs. Keep L1 held down and keep running around the creature until you are smack dab in front of it.

SWITCHING WEAPONS

In addition to the Ancient Sword, you carry a bow and arrow. You can switch between these weapons (or no weapon at all) as long as you are not grabbing anything or holding on to a ledge. To switch, press Left and Right on the directional buttons. The icon in the lower right corner of the screen shows which weapon you currently have equipped. You can also quickly sheathe and grab your weapon by pressing Down and Up on the directional buttons.

USING THE BOW

To fire an arrow, hold down ● to enter into the aiming perspective and use the left analog stick to aim at your target. Like the Sword Stab, the longer you hold down ●, the stronger the attack. Release ● to shoot the arrow.

If your arrow connects with the soft and fleshy underside of the hoof, the Colossus will be temporarily crippled and collapse on its weakened leg, giving you the perfect opportunity to climb on to the beast. Quickly run around to the injured hoof, grab the fur on its leg next to it, then start climbing.

LEAP!

Oftentimes, you can use your strength to your advantage by holding ▲, pressing up, left or right and then releasing to launch yourself in that direction. As long as you keep the L1 button held down and have a good handhold, you leap a few feet and cover some distance. This can come especially handy when you are running out of stamina and need to get to a rest point quickly.

REST SPOT

Continue to climb up the length of its leg and toward the shoulder blade. Up here, climb to the bony platform and use it to regain your stamina before continuing. If the Colossus attempts to shake you off, quickly press and hold L1 to grab the ledge or fur.

Once your Stamina Meter has completely refilled, continue your climb. This time you must climb hand over hand horizontally, toward the rear of the beast, while searching for its marker. This costs you a good amount of stamina as it does its best to shake you. Move as quickly as possible and don't hesitate.

REST SPOT

When you reach its hindquarters, climb the small space in between its exposed vertebrae and the piece of bony cartilage. Use the platform as a makeshift rest spot.

Choose a side (it doesn't matter which) and start moving up the side of the beast toward its head. When you reach the vertebrae, jump and grab each edge and loft yourself over them.

The first of two markers is found above the tailbone on the beast's back. Position yourself right in the middle of the glowing marker, and stab into it with your sword. It takes at least three strong strikes to reduce the creature's damage meter by half before the marker disappears.

DIRECT HIT

You will know if you've scored a strong and direct hit with your sword if a stream of black gore gushes out of the wound.

Continue past the shoulders and neck, then to the back of the head to find your objective. As before, keep a solid handhold, as well as an eye on your Stamina Meter and start stabbing away at the marker on the its head.

Once the marker disappears, it's time to seek out a second marker. Using the Ancient Sword to pinpoint the next weak spot can be a tough proposition on these moving behemoths, as you will not be able to have a handhold and can easily get thrown off. If you do so, be quick in your scan of the area and continue.

In a desperate attempt for survival, it violently tries to shake you. Stay diligent, don't let go, and retreat back to the shoulder blade if you need to regain your stamina. Eventually, the beast is felled and you are once again pierced by the dark tendrils before blacking out.

COLOSSUS III

The Path to the Colossus

The Path Revealed

Map Location: 2E

Thy next foe is...A giant canopy soars to the heavens. The anger of the sleeping giants shatters the earth...

1. Use the sword to discover the path to the northwest.

2. Take the second bridge to the left of the stone arches.

3. Ride along the grassy plains following the cliff side.

4. Enter the shadowy canyon.

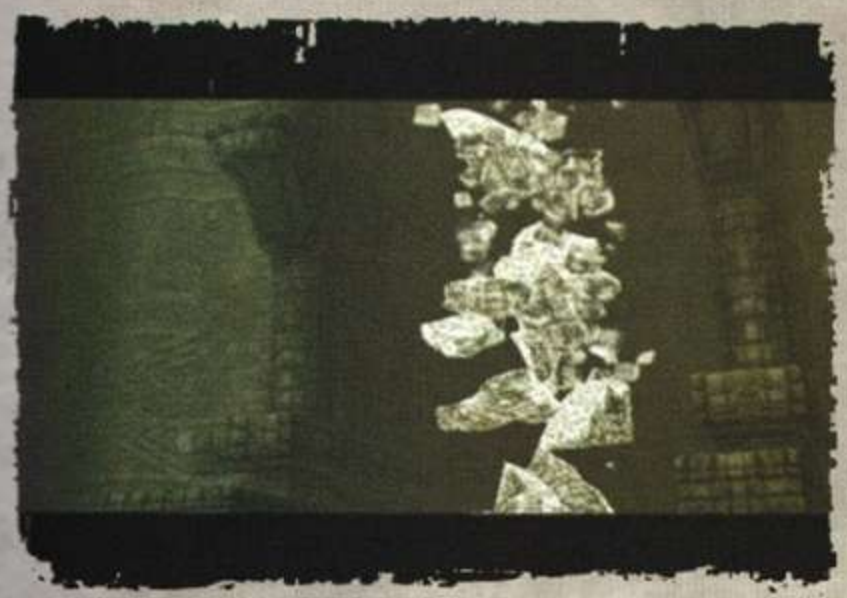
5. Arrive at the misty lakeside.

6. Swim across to the ramp.

7. Run up the ramp and leap across to the platform.

The Giant on the Platform

Searing white light destroys the blackness. Once again you are among the living. A second idol is shattered and a new goal is set in place. Even the sight of two doves flitting about your beloved cannot dissipate the feeling of dread slowly pulsing through your body.



Mount Agro and exit the shrine, holding your sword high to catch the sunlight and reflect its rays toward your next destination. The path you seek is to the northwest.

Follow the Light

At first, you ride in the same direction as the last Colossus, but instead of crossing the bridge at the broken arches, you must ride across the smaller bridge to the left of them.

The bridge leads to open, grassy plains. Get your bearings using the sword and continue riding to the northwest, following the steep drop off of the canyon wall on the right and using it as a guide.

The Shadowy Canyon

You eventually come to a canyon opening, which allows you to cut a swath through the rocky cliffs and out on the other side to your final destination, a misty coastline.

LIGHT AND DARKNESS

Your sword will not be able to reflect the sunlight if you cannot catch its rays. Anytime you find yourself in darkness, heavy fog, or indoors, you must rely on your wits and intuition to find the way.

The final destination is the towering platform in the water off in the distance. To reach it, swim to the crumbling ramp and climb it to the top.

SWIMMING

Wading into deep water causes you to automatically start swimming. To swim above water, press the left analog stick in the direction you want to move. For more speed, dive under the surface by holding L3. However, holding your breath underwater requires stamina, and your Stamina Meter will slowly deplete while you are submerged. Release L3 to come up for air and refill your meter when it gets low.

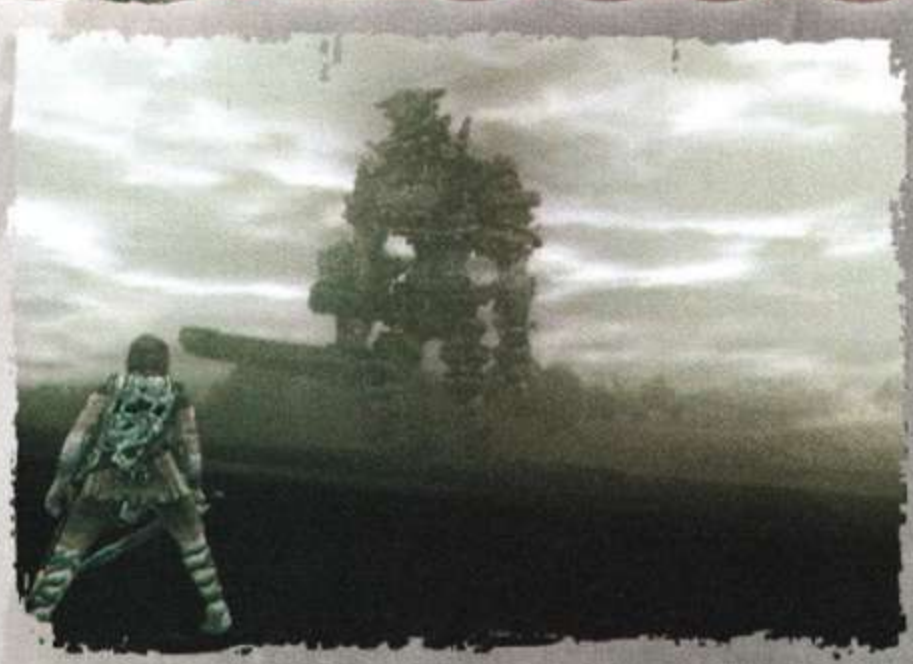
A Leap of Faith

When you reach the ramp, carefully run up its length. Unfortunately, the unstable and crumbling ramp comes to an abrupt drop off at the top, forcing you to find another way to get to the platform to your right.

Get a running start and leap off of the edge of the ramp and over to the broken section diagonally to the right. Hold down L1 as soon as you jump, as you must grab the small ledge in order to save yourself from tumbling to the water below.

Shimmy around to the right until your back is to the platform, then leap across and grab its ledge. Once you are safely across, use any of the stone outcroppings to get up to the ground above. Up top, your next foe awaits.

COLOSSUS III



What looks like an innocuous pile of rubble off in the distance turns out to be the next Colossus. The earth shudders as it slowly rights itself, towering above you like a menacing stone monolith. This beast is heavily armored and carries a gigantic stone sword.

WEAK-POINTS

Stomach, top of head.

REST-SPOTS

Broken armor on right arm, shoulder blades, platform around torso

PREFERRED PATH

1. Locate the circular stone platform set in the ground and lure the Colossus over to it.

2. Patiently wait for it to rear back to strike, then dodge out of the way.

3. The behemoth's sword striking the stone platform causes the brittle armor on its arm to shatter.

4. Dodge a second attack, then jump or climb onto the sword before it can be raised into the air.

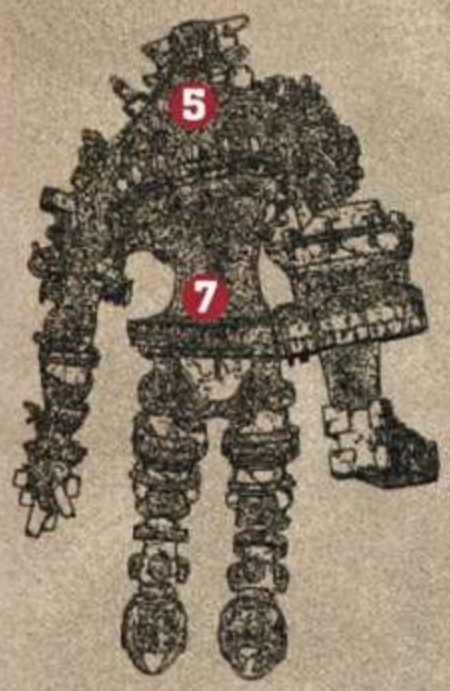
5. Climb up the extended arm, past the broken armor, and up its back.

6. Attack the marker on its head first, retreating to its shoulder blades if you need to regain stamina.

7. Climb down its back and drop from the ledge along its middle back to the platform around its torso.

8. Run around the platform to its stomach and attack the second marker.

COLOSSUS III



THE BATTLE BEGINS

The Colossus is heavily armored, which, at the moment, is keeping you from climbing up to its weak spots. The first goal is to locate the circular stone platform set in the soft ground and lure the giant to it while avoiding its damaging downward sword strikes.

Striking the solid stone platform causes the brittle armor around its arm to shatter, creating a path for you to climb. Once this happens, lure the creature into attacking you again, this time at the soft soil, then jump, grab and climb up its sword to get at the fur on its arm.

CRYPTIC CLUES

If you get stuck or can't figure out a way to attack a Colossus, after a few minutes, Dormin offers a subtle hint to help point you in the right direction.

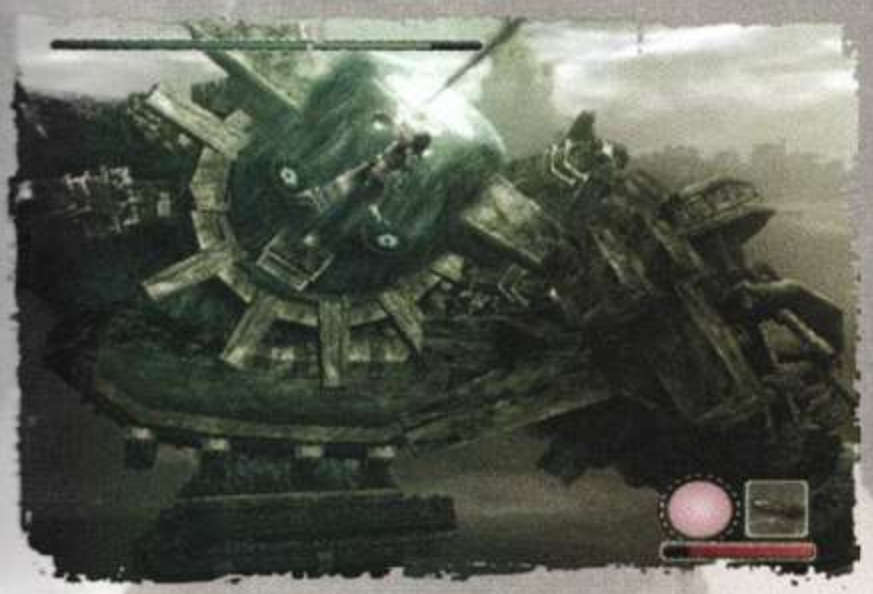
Once on the platform, patiently wait for the creature to approach and rear back for a strike. As soon as it does so, take evasive action and quickly roll or run out of the way before it's too late.

REST SPOT

Scramble up the beast's arm, heading toward its back. There is a place to rest and regain your stamina where the brittle stone armor around its arm has shattered.

Continue the ascent by climbing up the back of the arm. The destination is the top of its head, where the first of two markers are found.

Plunge your sword deep into the exposed skull and hang on for dear life as it violently attempts to shake off its source of pain: you. It takes anywhere from three to five strong stabs to cause the first marker to disappear, whittling down half of the Colossus' damage meter in the process.



REST SPOT

If you need to rest and regain stamina, retreat down to the shoulder blades. While there is no solid platform on which to stand, as long as the behemoth stays level, you should be safe from falling.

The second marker is found on the exposed area of the stomach. The easiest way to get to it is to climb down its back, hang over the ledge, then drop and grab the fur of its lower back. Even if you miss, you should still land safely on the platform which circles around the behemoth's torso.

Carefully follow the platform around to the other side to locate the marker, then grab hold and resume the attacks. Another four strong stabs end this Colossus' life and get you one step closer to being reunited with your beloved.

COLOSSUS IV

The Path to the Colossus

The Path Revealed

Map Location: 5G

Thy next foe is in the land of the vast green fields... Rows of guiding graves... It is giant indeed, but fearful, it is not.

1. Use the sword to discover the path.

2. Ride Agro east through the dark ravine.

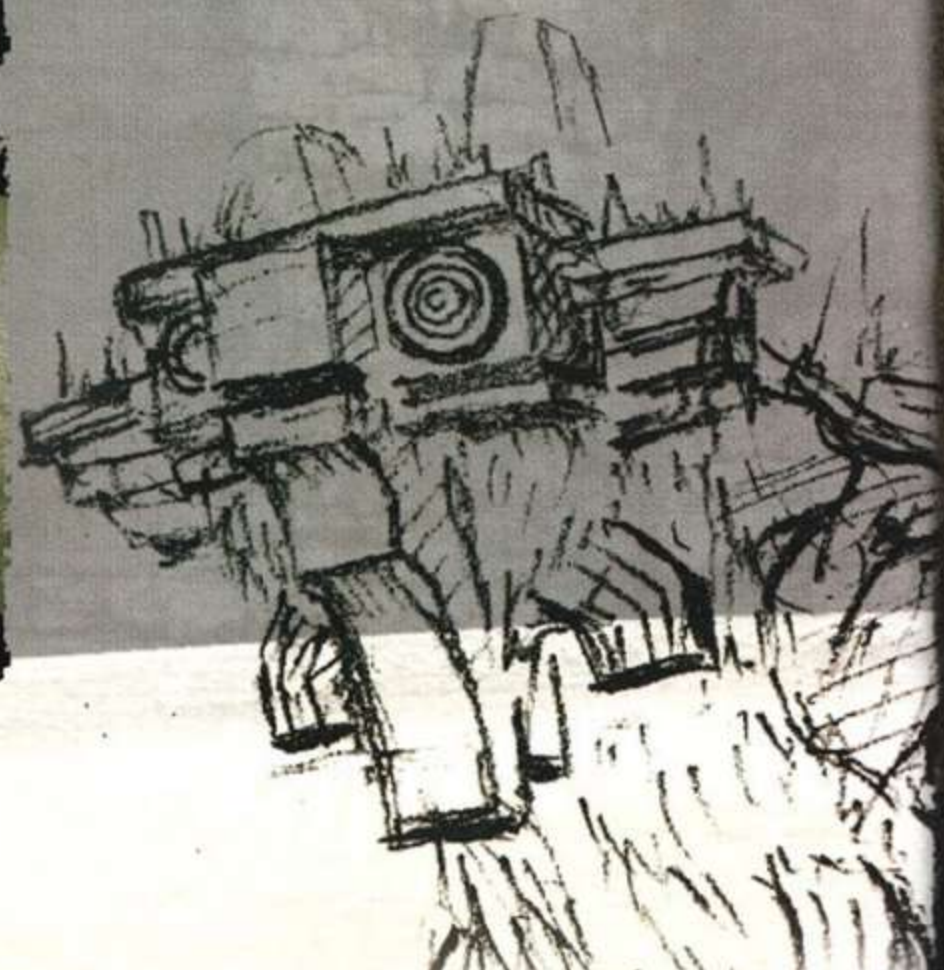
3. Follow the mountainside path into the clearing.

4. Locate the Colossus at the clearing's end.

The Creature in the Clearing

You know what to expect and what happens next. Your insides in knots, your body in pain, yet you won't relent until you've fulfilled your quest and have returned your beloved back to the world of the living. Something inside you is not quite right. A third Colossus has been felled, its idol destroyed, yet there are still 13 more to go.

Locate Agro and prepare to embark for your next destination. Use the Sword of the Ancient to pinpoint its general location, which is to the east.



As you approach the foothills, a small, shadowed ravine comes into view. Enter the ravine and follow its dark length until you arrive at the opening on the other end. Somewhere in the clearing below is where to find the next Colossus.

Follow the path that runs along the mountainside to get down into the clearing. Once there, ride past the bunkers set in the ground and head toward the back.

COLOSSUS IV

At the back of the clearing sits the regal creature. Possessing needle-like claws, it can stab and pierce the ground with a deafening and deadly blow. Two stone braids dangle from its majestic head, but don't let its splendor fool you; this beast is out for blood.

WEAK POINTS

Neck, top of head

REST SPOTS

Bone platforms on shoulders

PREFERRED PATH

1. Lure the Colossus to one of the back bunkers.

2. Allow it to get close and start to attack with its pointed claws. Drop down from the bunker and enter into its opening.

3. Run through the underground tunnel then up the stairs and out the other end.

4. Carefully sneak up behind the beast while it is still attacking the bunker entrance.

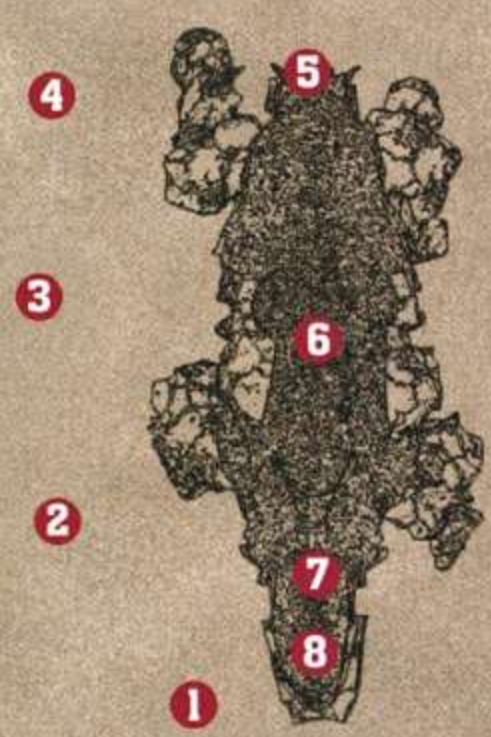
5. Without it seeing you, wait for it to drop its tail and then quickly jump up and grab hold.

6. Climb and run up its back toward the barely visible marker on its neck.

7. Stab its neck to cause the creature to lower its head, giving you access to the marker on top.

8. While its head is lowered, drop down and attack the marker to fell the beast.

COLOSSUS IV



THE BATTLE BEGINS

The Colossus' bottom half is heavily fortified with bony armor and smooth surfaces. To top it off, its piercing, pointed claws cause such force when crashing down that if you are anywhere nearby when it attacks, the shock will knock you off your feet. The only way to get access to this beast is to sneak up on it from behind. Dismount from your horse and start running back toward the bunkers.

With the Colossus giving chase, bypass the first bunker you come across (the one nearest to where it was located) and continue running to the one opposite it at the other end of the clearing. Patiently wait for the beast to get near, then drop down to the bunker entrance before it can attack you.

GO UNDERGROUND

These bunkers have a series of interconnecting underground tunnels, which allow you to run through and emerge on the opposite side. Quickly enter the bunker, take the stairs down into the tunnel, then follow it until you come up the other side. You should now be facing the creature's backside.

Carefully approach it from behind without being seen and patiently wait for it to drop down, lowering its tailbone just enough for you to jump and grab.

As soon as you're on, start climbing up its fur-lined back. The beast's marker can be found at the top of its head, but you must find a way to get access to it first.

REST SPOT

The Colossus does its best to shake you off as you slowly travel up the length of its back. If you find your Stamina Meter getting low, take a few moments to rest on the platforms attached to its shoulders before the final push.

ATTACK THE NECK!

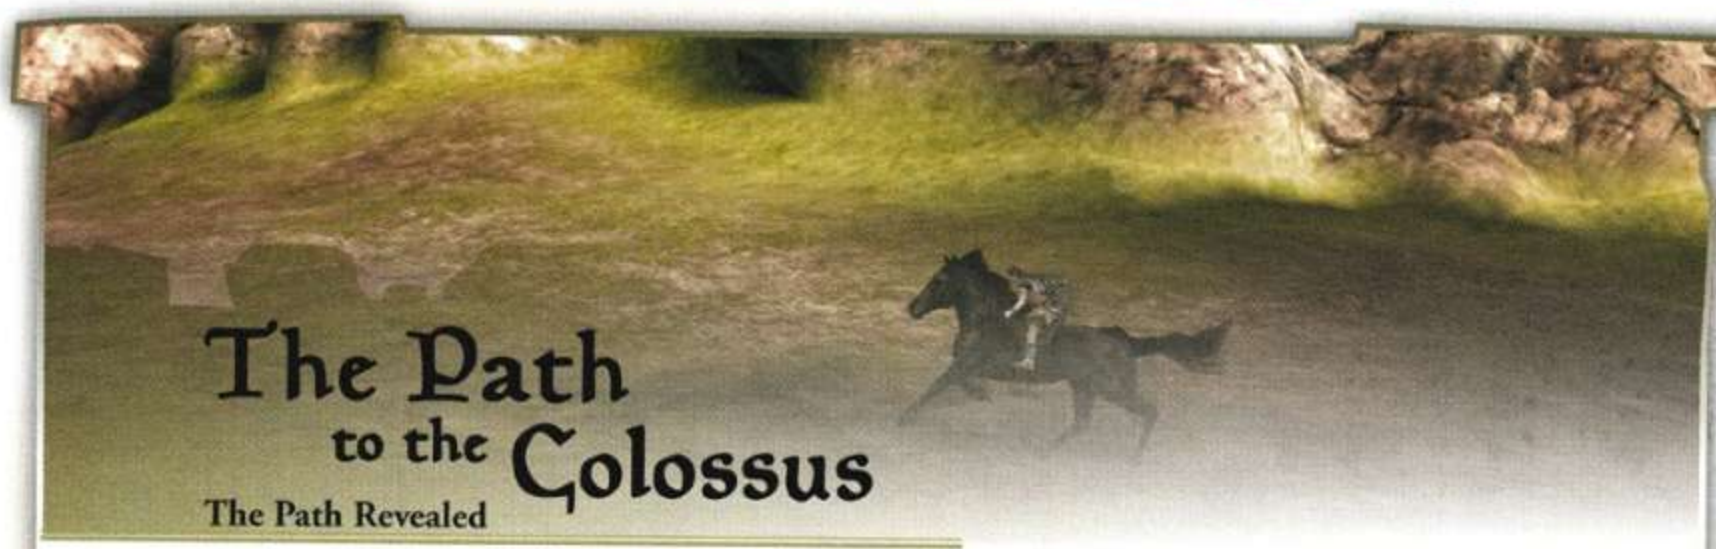
Attacking the small glowing marker at the nape of the neck won't deal any serious damage, but it causes the beast enough pain that it will lower its head. This is the opportunity you need to gain access to the real marker just above.

The moment the beast's head is bowed, let go of your handhold and drop, jump or run over the solid bony section of its neck to reach the top of its head. Once there, go in for the kill.

Keep an eye on your Stamina Meter, as the creature will do everything in its power to keep you off balance in an attempt to dislodge you from its fur. If you get dangerously low, hightail it back to the shoulder platform and rest up, then return to finish the job. It takes five-to-seven strong stabs to bring it down.

At long last, the Colossus is defeated, crashing down to the ground like all the others before it. There's no escaping the tendrils that pour from its carcass, so don't even try. You know where you will wake and what comes next.

COLOSSUS V



The Path to the Colossus

The Path Revealed

Map Location: 5G

The next foe casts a colossal shadow across a misty lake as it soars through the sky... To reach it is no easy task...

1. Use the sword to discover the path.

2. Ride Agro to the east, using the canyon walls to the right to guide you.

3. Continue to follow the cliff path that runs between the sheer drop off to the left and the canyon walls to the right.

4. Ride past the Save Altar and through the opening in the canyon wall.

5. Dismount on the other side of the opening at the water's edge.

6. Swim toward the ruins and underneath the submerged archway.

7. Climb up the tower ledges.

8. Cross the bridge and climb the tower stairs to find the Colossus soaring overhead.

Look to the Skies

Darkness gives way to light once more. A group of shadows keep you company, but their purpose is still not quite clear. The idol explodes and the next Colossus is cryptically revealed. Will this all be for naught? Only time will tell.

Ride Agro out of the shrine and use the Ancient Sword to direct you toward the next Colossus' location. Ride due east to find this one.

Ride toward the canyon walls and keep them to your right to use them as a guide.

The Cliff Path

Your path narrows, with the canyon walls to the right and a sheer drop off to the left. A quick glance below reveals a majestic waterfall.

Continue to take this eastern path along the mountainside, letting it guide you toward your final destination. There is a Save Altar where the path opens up into a clearing. Feel free to kneel at the altar and save your progress before continuing.

A small opening in the canyon wall leads to the water's edge. A series of dilapidated, ruined structures stand crumbling, half-submerged, in the dark lake.

The Colossus is somewhere out over the water, this much is for sure, but how to get to it is the question. In order to find it, you must obtain a better vantage point from which to scan the skies. Perhaps climbing to the top of the closest structure is the key?

SWIM UNDERWATER

The structure is surrounded by a fence, which keeps you from climbing onto its outer ledge. Fortunately, there is another way to get up to it. Look closely for the archway just underneath the water's surface, which you can swim under. This gets you inside its perimeter.

Once inside, grab the ledge of the tower and start jumping up to the top. Once you've reached the top, run across the bridge and up the stairs to find your prey.

COLOSSUS V

Swooping through the air, the swift and deadly Colossus lands on a perch where it rests until it can be rousted. Simply reaching this winged beast possessing large talons and a gigantic wingspan is going to be a challenge. Expect to overcome enormous obstacles if you wish to defeat it.

WEAK POINTS

Tail, right wing tip, left wing tip

REST SPOTS

Tail (when upright), shoulders (when upright)

PREFERRED PATH

1. Swim to the three platforms in the water and stand on the one in the center.

2. Locate the Colossus sitting on its perch and shoot it with an arrow to attract its attention.

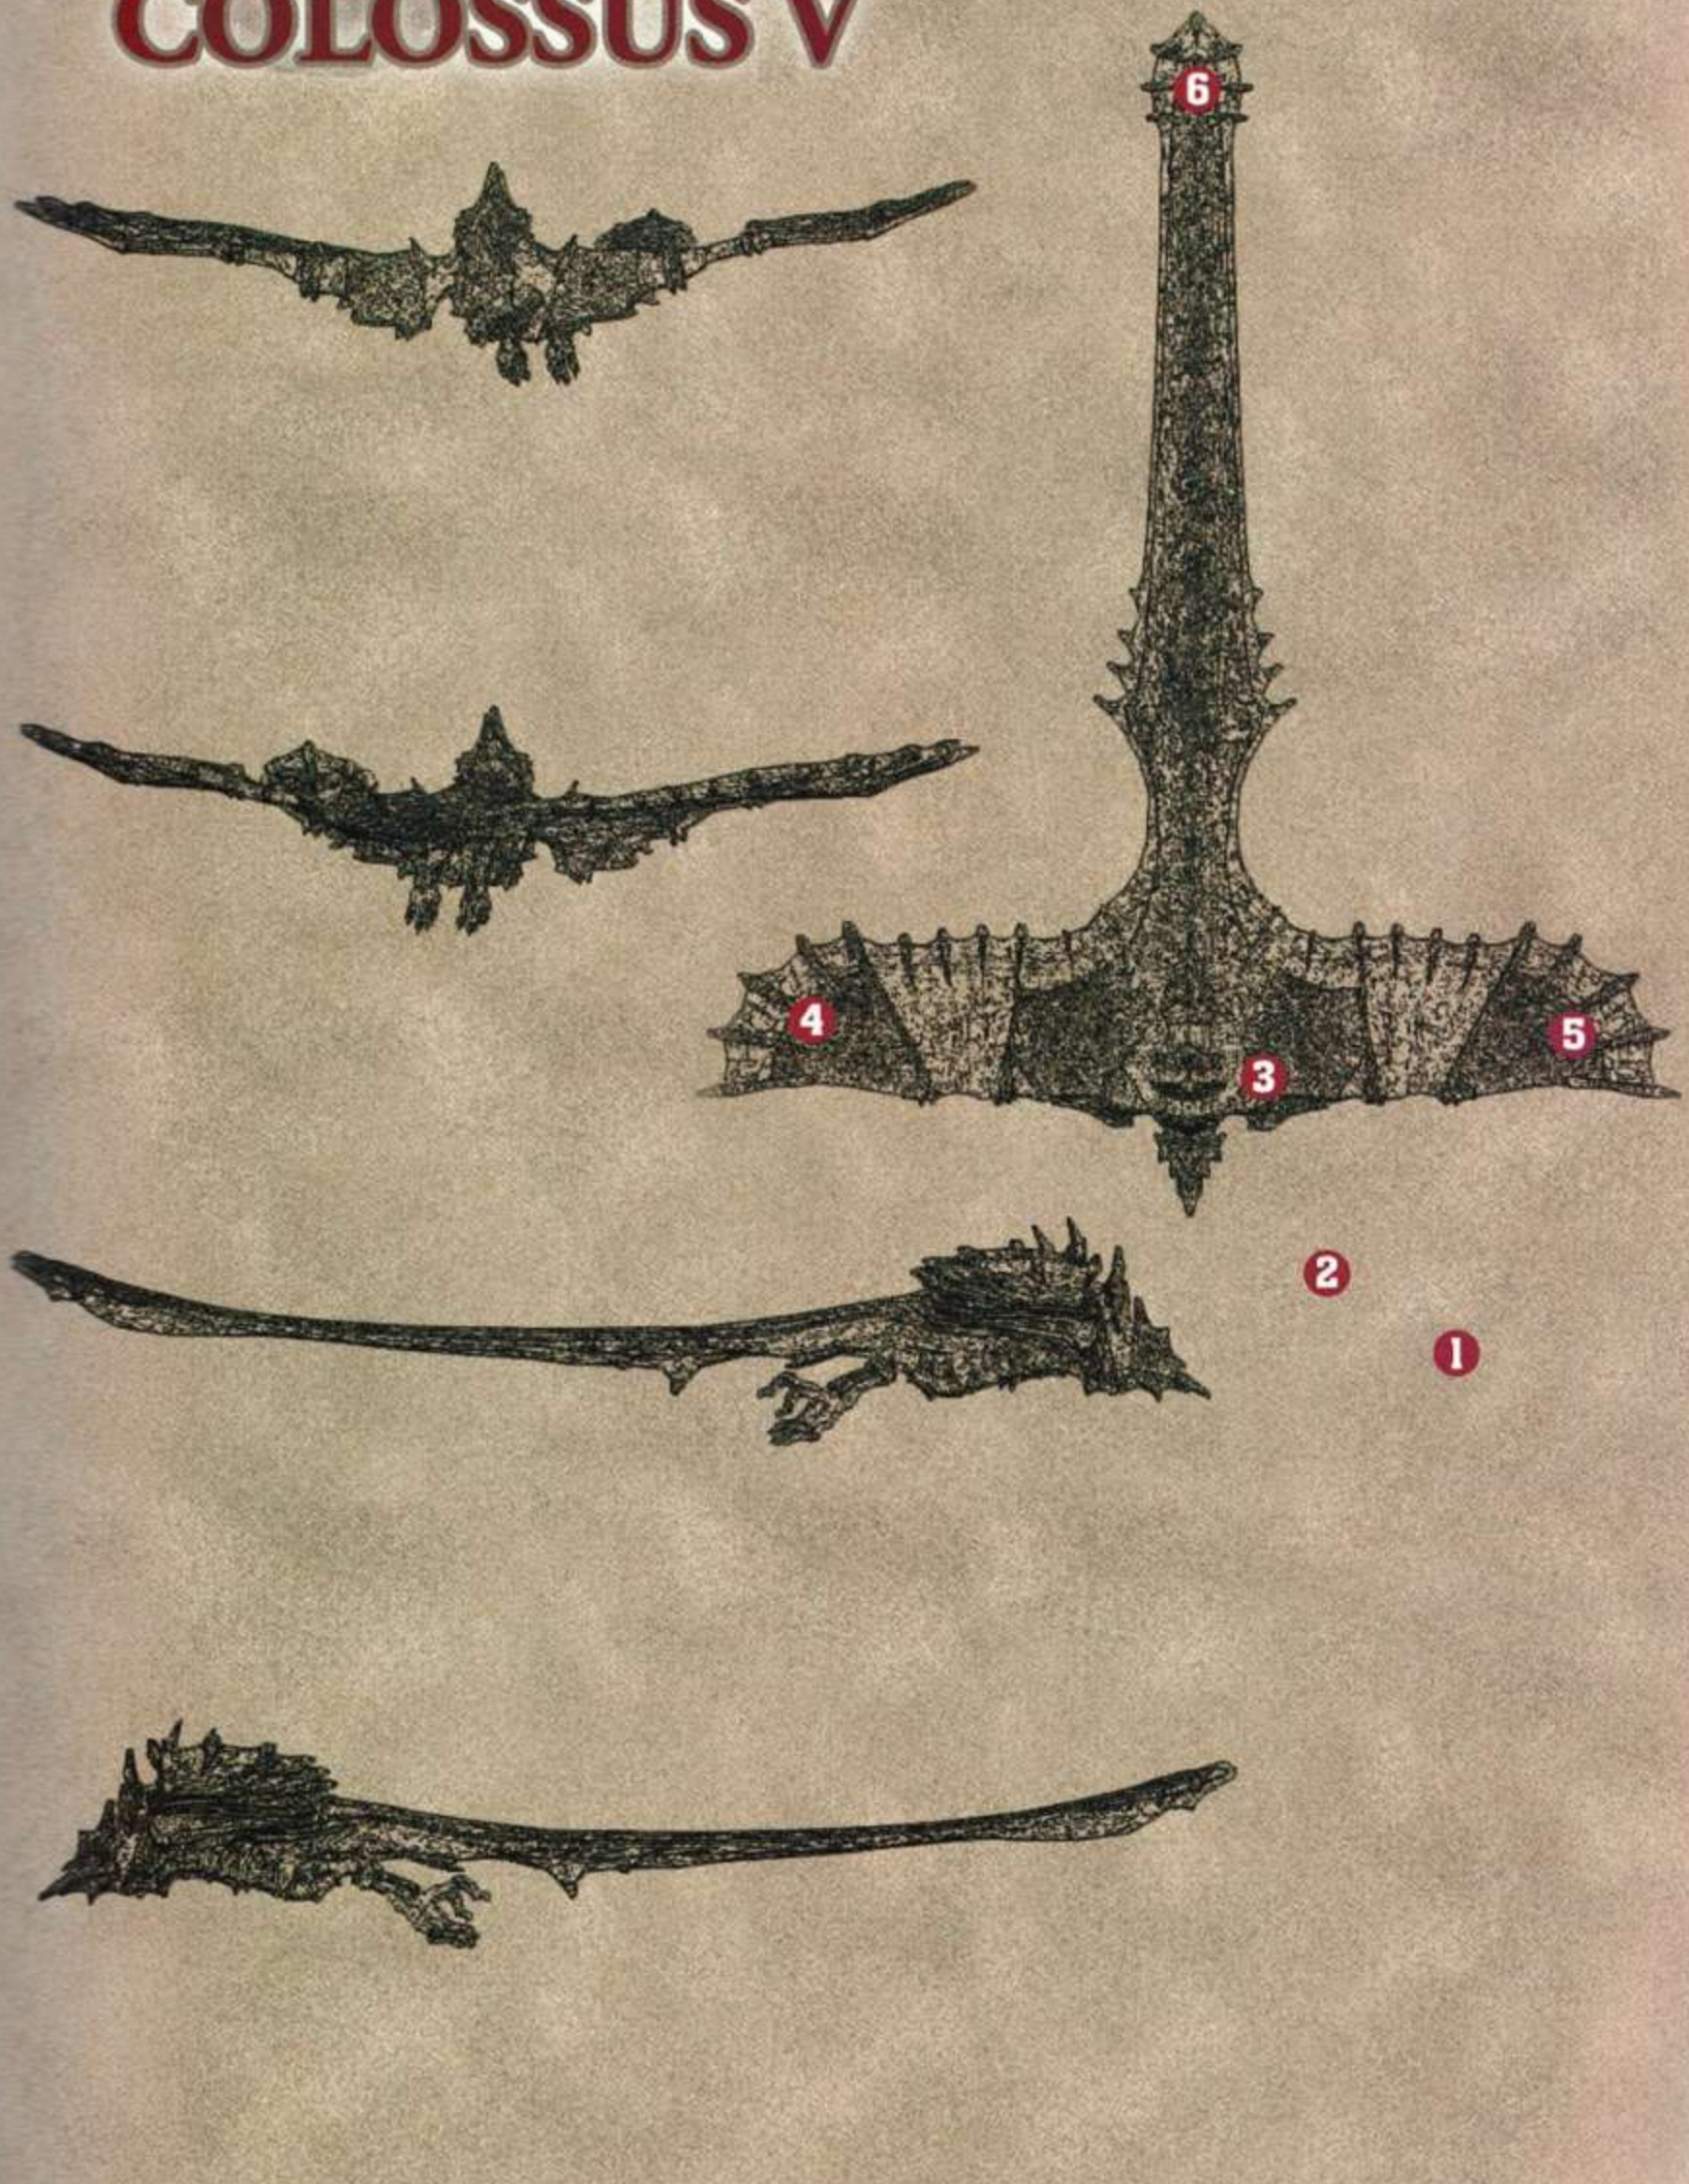
3. Patiently wait for it to swoop in for an attack, then jump and grab the fur on its shoulder as it draws near.

4. When its wings are level, run toward the right tip and attack the marker.

5. Repeat the process with the left wing tip.

6. Climb and run down its tail until you reach the final marker at the end.

COLOSSUS V



THE BATTLE BEGINS

Getting onto the Colossus is the first challenge. To do so, you must get closer to where it's perched. Drop through the hole in the fence at the top of the tower and swim to the set of three platforms in the water, which are found in the center of the lake.

Pull yourself up on the center platform, then use your bow and arrow to roust the beast from its perch and cause it to dive at you and attack.

STEADY YOURSELF

Getting onto the Colossus takes nerves of steel and precise timing. Sit tight, wait for it to swoop within a few feet, then jump and grab its fur as it flies past. If you miss, you will be knocked back into the water. You must try again as it circles around for another approach. If you're successful, the battle has just begun.

Hold on for dear life and don't let go as it flies higher and higher into the sky. As soon as you can begin to move, start climbing up to its shoulder area.

REST SPOT

You won't find too many opportunities to rest and regain your stamina, as the Colossus is continually flapping its wings, diving, spinning, and in a state of perpetual motion. However, whenever it's momentarily level, you should be relatively safe near its shoulder area.

There is no exact attack order to bring down this beast. It has three markers for you to find. The first and closest two are on its wing tips. Start with either one and carefully climb toward it.

Getting across the smooth section along each wing (between areas of fur) without falling off is the greatest challenge here. Do your best to wait for the creature to be level and not flapping its wings, then dash across.

HOLD ON!

If you find yourself knocked or blown off, quickly press ◻ to grab onto anything (the bony ligament, as well as the outer edge are options) and wait it out until you can right yourself and make another attempt.

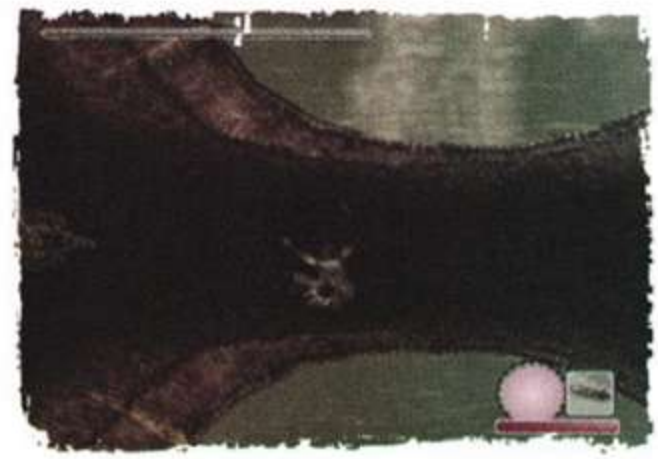
Stab the marker at its wingtip. Check for sufficient stamina to ride out the attack (at least a third left), as the beast will go into a tailspin and/or fly upside down in an attempt to dislodge you from its wing. It takes two strong stabs to eliminate each marker.

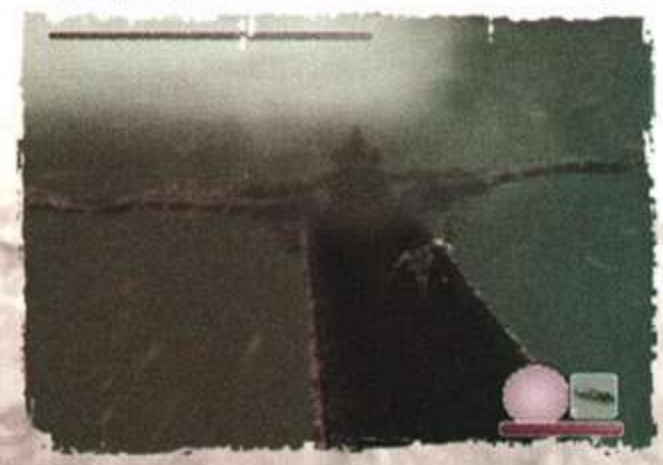
REPEATED ATTEMPTS

If you do get knocked off and fall back into the lake, locate the platforms and try again. Remember, you must shoot the creature with an arrow to get its attention.

Move back across the span and repeat the process with the opposite wing, doing your best to rest and regain your stamina along the way.

The final marker is at the tip of the tail. Carefully run, climb and shimmy down to it. You should be able to run at least a portion of the way once the Colossus is level.





Once you reach the marker at the end of its tail, start attacking the marker. It takes at least four strong stabs to send the beast crashing into the murky depths below.

COLOSSUS VI

The Path to the Colossus

The Path Revealed

Map Location: D6

Thy next foe is... A giant lurks underneath the temple. It lusts for destruction, but a fool, it is not.

1. Use the sword to discover the path.

2. Ride Agro southwest toward the small tree-lined wall.

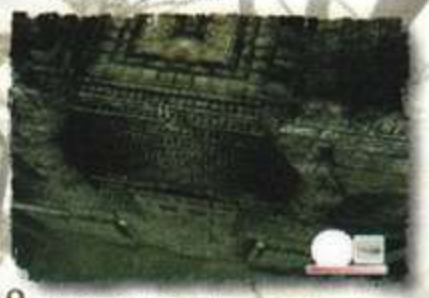
3. Enter the forest.

4. Once in the forest, follow the right side wall and enter the second opening.

5. Continue to ride out to the clearing and follow the sunlight toward the ruin carved into the mountain wall.

6. Arrive at the ruin and enter.

7. Navigate over the fallen stone blocks along the ruin corridors.



8. Arrive inside the ruin chamber, hang over the edge and drop down from ledge to ledge until you reach the floor.

To Slay a Giant

Another Colossus defeated, yet there are still many more to go before your request is fulfilled.

Make haste and exit the castle to locate Agro. A quick check with the Ancient Sword directs you toward the southwest. Continue to follow a diagonal southwest path heading toward the two stone columns jutting high into the sky off in the distance.

Enter the Dark Forest

To get to the ruin where the Colossus is located, you must ride through a dense, dark forest, shaded by a thick canopy of trees. Due to the darkness, it's easy to get turned around and lost in here. Follow the right wall to find your way through it.

While you are in the forest, keep the right wall in sight and stay nearby. Some large boulders and trees make it impossible to follow it directly, but if you don't deviate too far from it, you should be fine. Eventually, you find an opening in the wall. Pass it up and enter the second opening not too far from the first.

Navigate the Ruins

Ride through the opening to come to a clearing on the other side. Now that you're in direct sunlight, take a moment to get your bearings using your sword, then ride alongside the small cliffs to the left until you can get down to the lower area near the Save Altar. A ruined temple is carved into the side of the mountain off in the distance; this is your next destination.

Ride down to the ruin and dismount Agro. You must leave him behind and enter the structure on foot. A series of crumbling columns and blocks have fallen over and obstruct the entrance and successive corridor. Climb over each to venture deep inside.

Inside the vast, central chamber, you arrive on a platform high above the floor. The only way to get down below is to climb and hang over the ledge and drop from one small ledge to the next.

Drop and Grab

To climb down a series of ledges like these, you must hang, drop then quickly grab the next. Hold down L1 to slowly walk to the edge of the ledge and walk off. As long as you are holding L1, you will grab the edge when you drop off. Now, just let go, then quickly press L1 again to drop and grab the ledge below. Continue this process, moving to the left or right when you get to the center portion of the wall, until you reach the floor at the bottom.

COLOSSUS VI

Behind this solid stone wall is a tremendous bearded Colossus who doesn't appreciate his territory being invaded. Hulking, huge and ready to pound anything that moves with his massive fists, this behemoth will relentlessly chase you.

WEAK POINTS

Top of head, left deltoid

REST SPOTS

Shoulders

PREFERRED PATH:

1. Hide from the Colossus, then jump and grab his beard when he lowers his head to the ground.

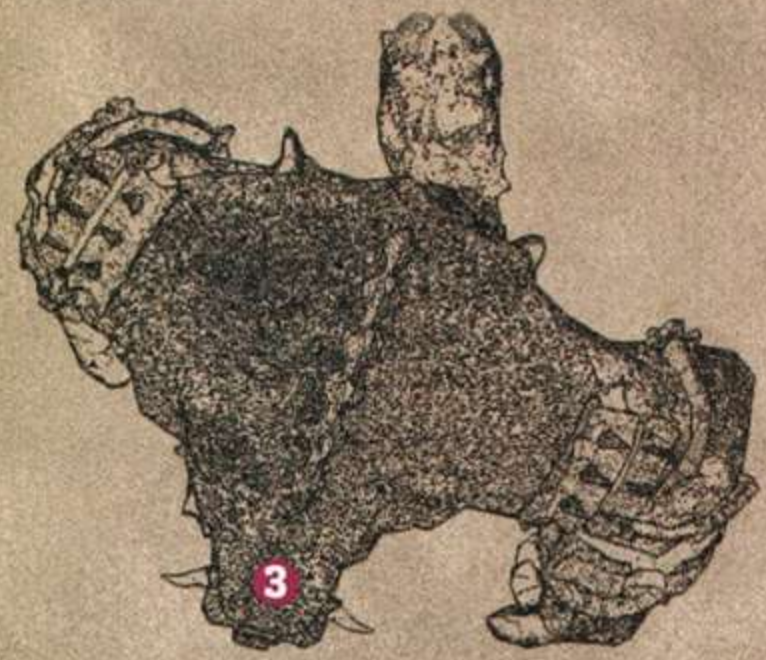
2. Climb up the length of the beard and onto its shoulder.

3. Climb onto the creature's head to locate the marker and hold on until you can execute a few strong stabs.

4. Once the marker at the head has been eliminated, climb down the beast's back and over to the left to find the second.

5. Stab the marker on the left deltoid five or six times until it brings down the beast.

COLOSSUS VI



THE BATTLE BEGINS

As soon as you touch foot on the ground, the wall you just climbed down lowers, revealing the bearded Colossus behind it. Run!

Repeat this process three times until you reach the opposite end of the chamber. Here, a small overhang keeps the behemoth from getting to you, allowing you a small degree of safety.

Scale the Walls

You won't be able to climb onto the Colossus right away. At the moment, the only option is to keep running and stay ahead of it. Unfortunately, a series of short walls impede your path. Quickly jump and grab one of the small columns lining each wall, hoist yourself up and over, then keep running to stay ahead of the beast.

Climb the Beard

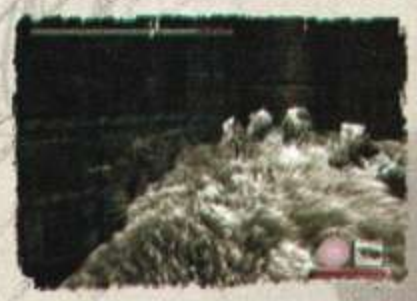
Stay in your hiding place and keep the camera focused on the Colossus. Frustrated that it can't get at you, it eventually lowers its head to find you. As soon as it does so, run out, then leap and grab its dangling beard.

As soon as you have a handhold of the beard, start climbing. From its beard, climb all the way up to its back and get on its shoulders. Of course, it will do everything in its power to shake you.

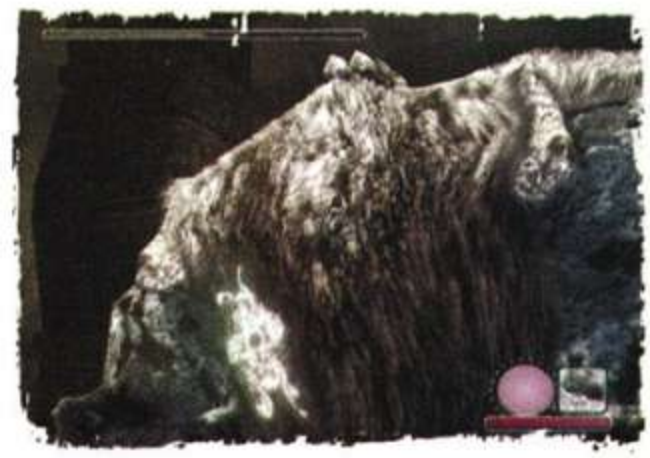
Rest Spot

You won't find any platforms or ledges where you can rest, but this creature's shoulders are relatively flat and provide a somewhat safe surface for you to take a few moments rest before making your assault. Just be prepared to grab its fur if it starts to shake violently.

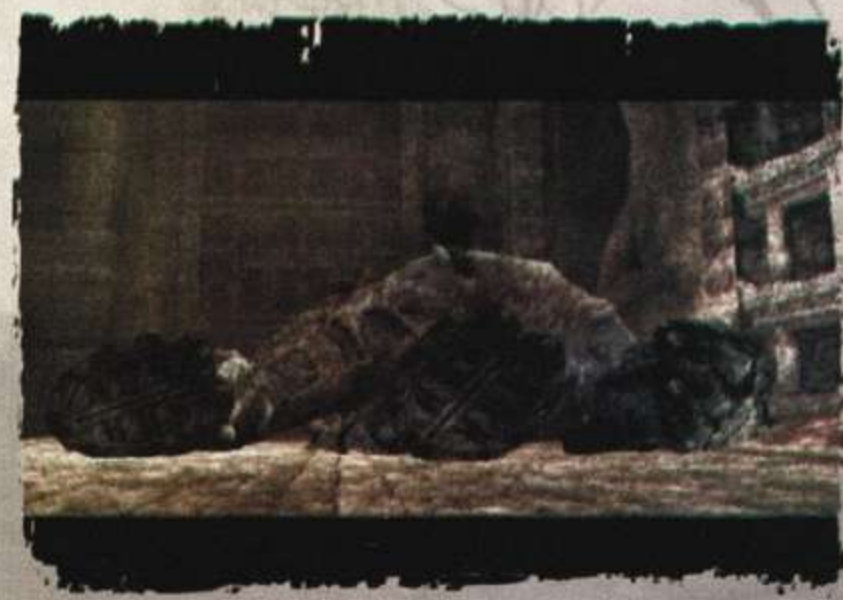
The first marker is on top of its head. Pick your spot, get a solid grip and attack it when you can. The Colossus almost continuously shakes, whips, and sways its head back and forth, making it tough to find a moment to get in a strong stab, let alone multiple. In between attacks, retreat to its shoulders to regain your stamina.



Once the first marker has been eliminated, start climbing down the creature's back, toward a second. Its location is on the left deltoid (bottom left side of its back).



The second marker takes four or five strong stabs to bring down the beast. Keep an eye on your Stamina Meter and return to its shoulders for a rest if you get dangerously low. Once the final blow has been struck, the behemoth crashes down to the floor.



COLOSSUS VII

The Path to the Colossus

The Path Revealed

Map Location: H4

Thy next foe is... A ruin hidden in the lake... A ripple of thunder lurks underwater...

1. Use the sword to discover the path.

2. Ride Agro northwest across the bridge between the stone columns.

3. Take the left path on the other side of the bridge leading to the plains.

4. Enter the opening in the canyon.

5. Ride through the canyon and arrive at the lake.

6. Follow the shoreline, keeping it to your right, then ride into the canyon opening on the left.

7. Take a right at the canyon intersection and ride through to the next opening.

8. Continue to ride to the northwest, past the Save Altar and toward the stone columns in the distance.

9. Enter the stone archway in the wall.

It lurks in the lake

Another Colossus down, you awake to the thunderous sound of its idol incarnation exploding into a pile of rubble. As you struggle to your feet, Dormin speaks.

Exit the shrine on the back of Agro and use the Ancient Sword to pinpoint the direction of the next Colossus. Its location is to the northwest.

The path to the Colossus leads past the broken stone arches and along the long bridge. At the fork, take the left path and out to the open plains.

A canyon opening in the distance leads to the lake where you battled Colossus V earlier. The beast you seek is not in this body of water, but it is not far from here.

Follow the Coast

The path to the Colossus continues down a second canyon. To locate the canyon's opening, follow the coastline, keeping it to the right, and take a left when you reach the canyon wall at the end.

Take a right at the point where the canyon intersects and splits into two paths. At the next intersection take another right.

This path leads to a wide-open area and a Save Altar. Just beyond, to the left of the Save Altar, is a series of columns jutting high into the air. The location beyond is where to find what you're looking for.

Locate the archway in the wall, which leads to a long bridge over a boggy marsh. Somewhere, just underneath the surface of the water below, is anothers Colossus.

Ride along the stone bridge until it abruptly comes to a broken end. You must hoof it on foot from this point forward.

Climb the Twisting Tower

To get a better view of the marsh and its slimy inhabitant, carefully climb down to the ledge below, leap across to the tower and start the corkscrew climb up to its top.

DIVE!

Jump into the marsh with style by pressing ▲ to jump off of the platform and holding ✕ to perform a dive.

COLOSSUS VII

In the depths of the black water stirs the giant beast. Its long, sleek body is lined with a series of electrically charged spikes, which shoot from its spine. Once submerged underwater, these spikes discharge deadly electricity and are strong enough to electrocute anyone unfortunate enough to be nearby in the water.

WEAK-POINTS

Base of spike #1, base of spike #2, base of spike #3, base of head

REST-SPOTS

Green patches of fur when above water

PREFERRED PATH

1. Swim in the water toward the Colossus to get its attention.

2. As soon as the creature's head passes underneath you, start swimming away from it to avoid the spikes as they emerge.

3. Once the spikes have been cleared, quickly turn around, swim in the opposite direction, and grab the tail when it surfaces.

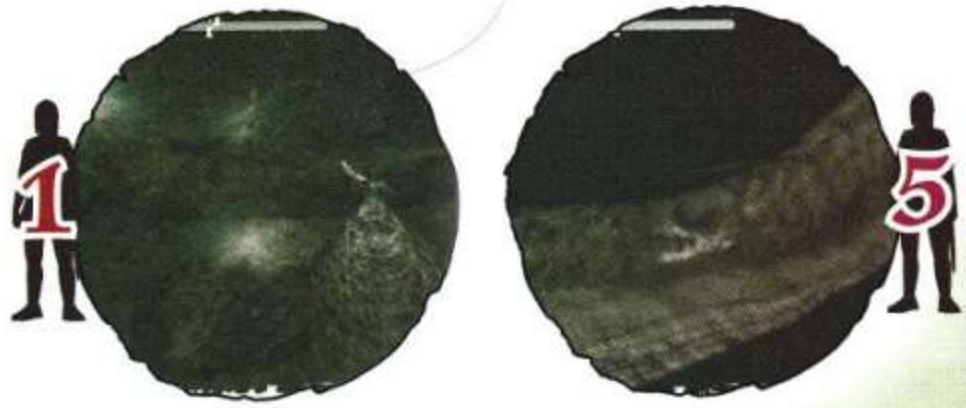
4. Run up the Colossus' back when it's above water.

5. Grab its fur and hang on when it submerges.

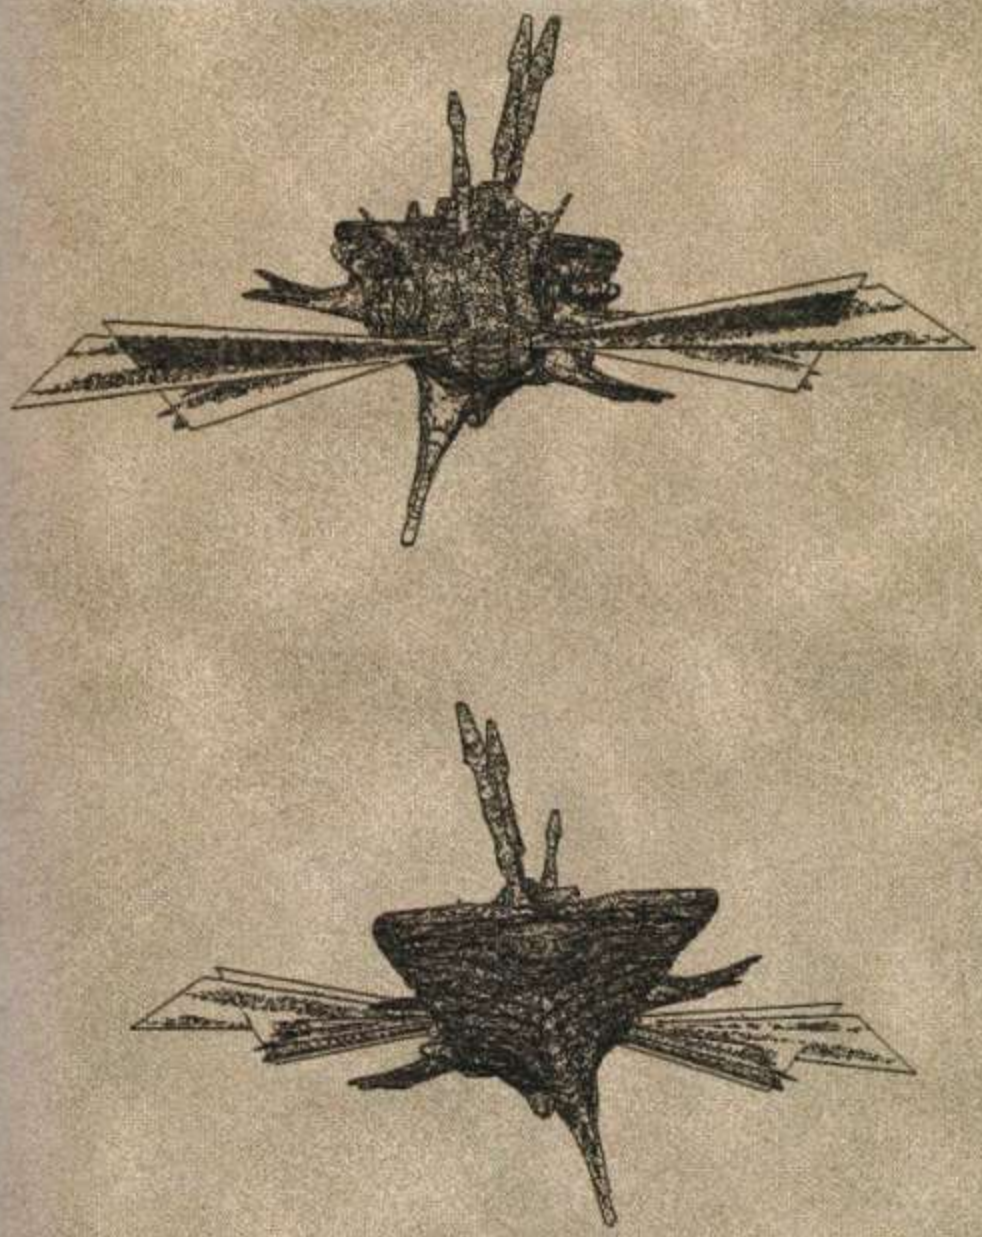
6. Each time you near a spike, hold on and wait behind the brown patch of fur for the beast to dive and surface—if you go any further, you will be electrocuted when it submerges.

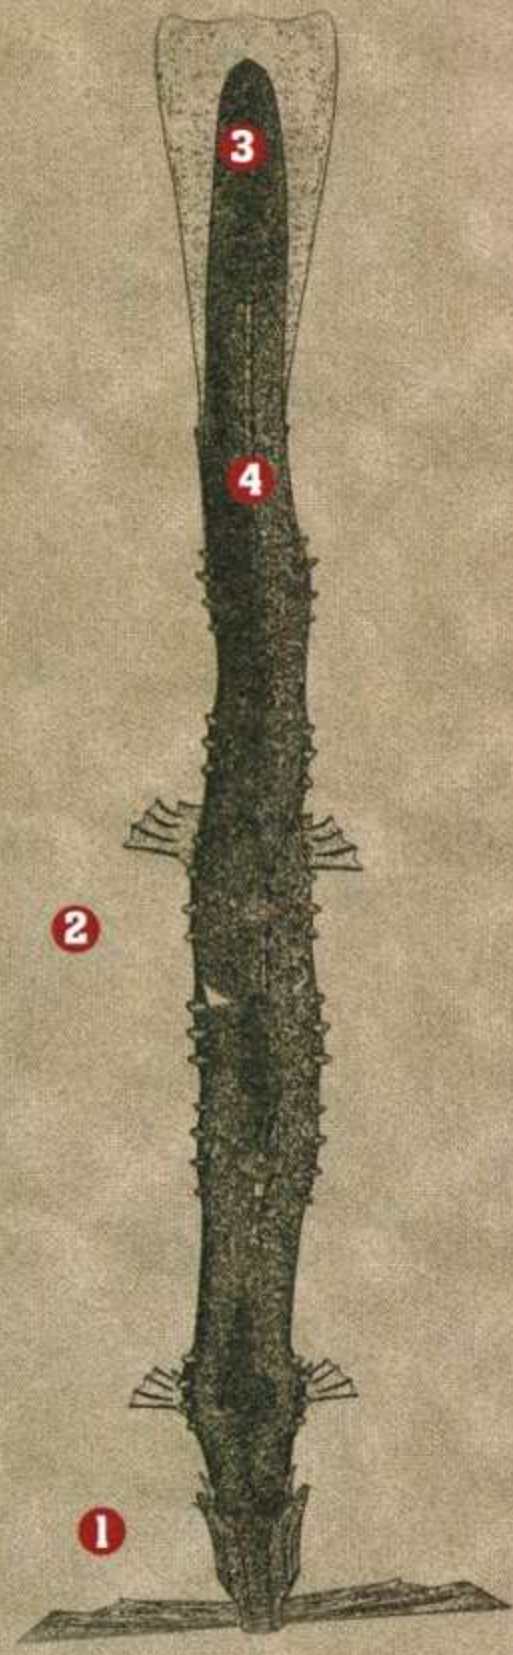
7. The moment the creature resurfaces, quickly run up and stab the barely discernable marker at the base of the spike to disable the electricity and cripple it.

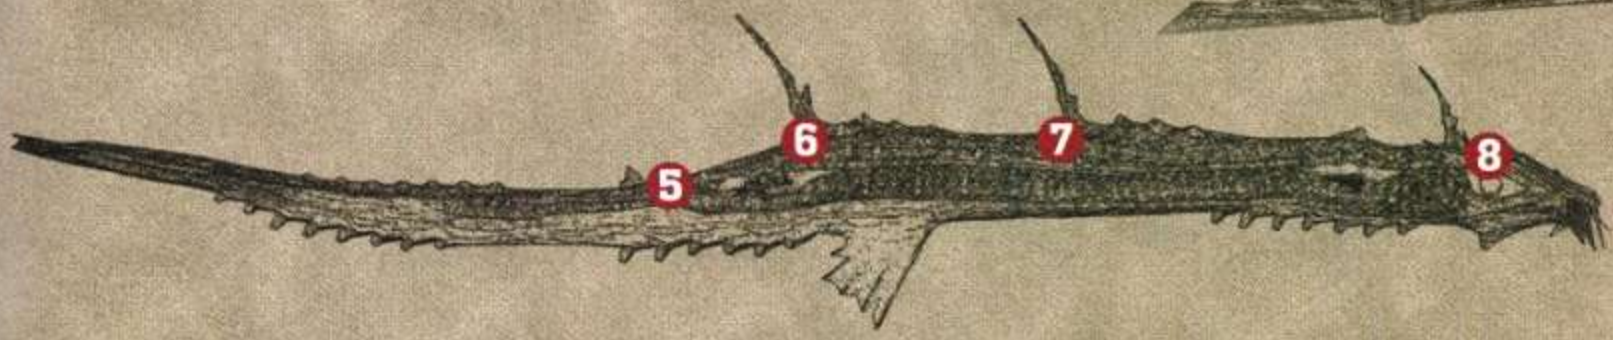
8. Repeat with each spike until you've destroyed all three, then make a final push for the marker at the base of its head.



COLOSSUS VII







THE BATTLE BEGINS

The moment you dive into the water, start swimming toward the Colossus, which is easily located by its three glowing spikes, even when underwater.

GAZE AT THE COLOSSUS

Press and hold L1, which keeps the creature's head in view. This allows you to keep your bearings and makes it easier to get its attention.

In order to coax the behemoth from beneath the water's surface, swim past its head so it can see you. As soon as it does, it circles around and breaks the surface with its deadly electrically charged spikes. Swim in the opposite direction to avoid being touched by them.

As soon as you've cleared at least two of the three spikes, quickly turn around and swim back toward the Colossus as if you were trying to catch a wave. Its tail will break the water's surface and you only have a split second to grab it before it submerges once again.

Grab and Go

In order to take out this Colossus, you must carefully traverse its back, taking out each of the three spikes before making a final assault on the marker at its head. To navigate the creature's length, you must constantly trade off between hanging on to its fur when submerged and running up its back when surfaced. Quickly press and hold L1 each time it starts to dive.

Rest Spot

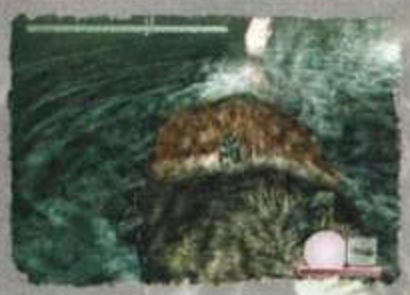
There are no typical rest spots anywhere along the Colossus' surface, but each time it resurfaces you can safely let go of your handhold and allow your Stamina Meter to replenish.

In order to eliminate the Colossus, you must take out each of the three electric spikes and stab the marker at the base of its head. The spikes are harmless when above water, but the moment they are submerged, they become potentially deadly, crackling with electrical energy and electrocuting anything within their range.

LOOK AT THE FUR

Use the its fur as an indicator to how close you can approach the spikes without being electrocuted. The brown patch near each spike signals the area that becomes electrically charged when it is submerged.

As soon as you reach the first spike, stay behind the brown fur to ensure your safety, grab hold of the Colossus' fur, and wait for it to submerge, then resurface. The moment it is once again above water, make an assault on the small marker at the base of the spike. The window of opportunity to stab it is small, but it takes just one direct strike to disable the electricity and cause the spike to die and wither.



Repeat the process a second and third time with the next two spikes. You must constantly trade off between hanging on while submerged to slowly making your way up its back.

Deep Water

It's possible during the battle that the Colossus will dive deep underwater and stay submerged longer than you can hold your breath. When this happens, let go and return to the surface for air, allowing the creature to swim away. To regain a handhold and return to the battle, just repeat the previous steps.

The final spike is the toughest, as it is located further away from the safety spot and your window of opportunity to disable it is incredibly small. The moment the beast surfaces, make a beeline for the barely discernable marker at its base.

Now that the final spike is disabled, you are free to attack the large marker just beyond, at the base of its head. Be patient and continue to hold on, as the beast constantly dives underneath the surface and won't go down without a fight.

It takes four to six strong stabs to wipe out the remaining health and send it sinking down to the bottom of the boggy marsh. The black tendrils find you next, even from the depths and darkness below. The seventh Colossus has been defeated but there are still so many more to go.

COLOSSUS VIII

The Path to the Colossus

The Path Revealed

Map Location: G6

Thy next foe is... A tail trapped within a pail deep within the forest... A shadow that crawls on the walls.

1. Use the sword to discover the path.

2. Ride Agro southeast toward the opening in the far canyon wall.

3. Ride through the canyon and veer left where it intersects.

4. At the other side of the canyon, locate the cave in the mountain wall and ride to it.

5. Ride through the cave and out the other end.

6. Follow the small cliff path above the scenic waterfalls.

7. Enter the second cave opening on the opposite end of the path, then to the stone structure on the other side of the lake.

8. Dismount Agro and enter the structure.

9. At the bottom of the stairs, climb either stone column by jumping and grabbing the small ledges along their length.

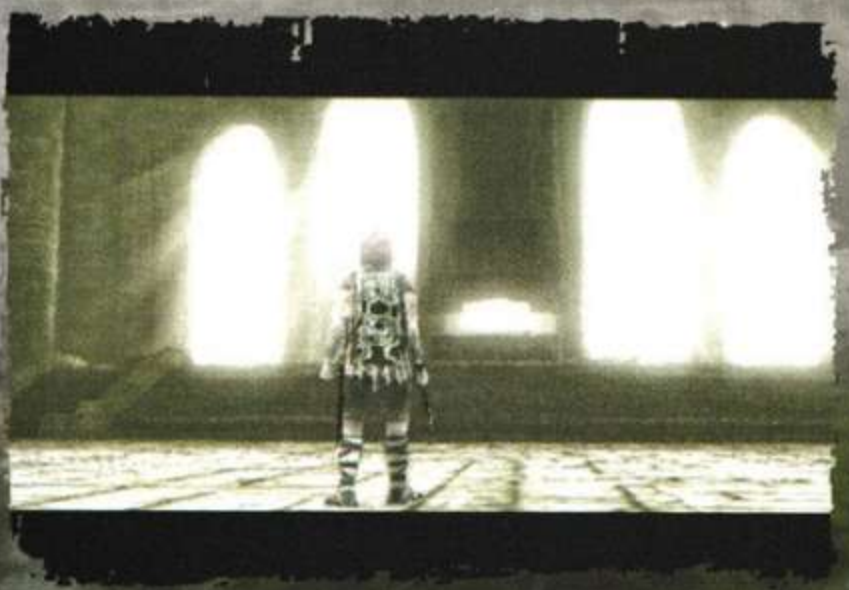
10. Shimmy around to the other side of the column and leap to the platform across the way.

11. Follow the ledge to the opening in the wall, drop down into the corridor and climb up to the next opening.

12. Take the stairs down into the coliseum to find the next Colossus.

The Beast in the Coliseum

Head pounding, your body on fire, the daunting task set upon you by the mysterious Dormin is not even yet half over. With each successive Colossus brought down, it feels as if a piece of your soul is ripped away. Dormin delivers your next task with yet another cryptic riddle.



Locate Agro, exit the shrine and use the Ancient Sword to find the general direction on the next Colossus. This one is to the southeast.

Follow the path emblazoned by the Ancient Sword into the canyon set in the far mountain walls. As you reach the opposite end of the canyon, veer left and continue out into the opening.

Once in the clearing on the other side, locate the cave entrance set in the far mountains and ride inside.

Majestic Beauty

Even though you are on an urgent quest, allow yourself a few moments to take in the grandeur and unbelievable beauty of the landscape. The entrance to the cave leads to a scenic view of a cascading waterfall.

Follow the winding cliff path over the pass and into the next cave entrance. This tunnel opens to a lush oasis with a stone structure located on a small island near the back cliff wall.

Take the path to the right, which leads to the structure, then dismount Agro and enter; a set of stairs inside leads deep underground.

Climb the Column

At the bottom, it may seem as if you've reached a dead end. However, look around until you find a set of stone columns with ringed ledges along their length set inside the chamber. Pick either one and ascend on these ridges.

At the top of the column, leap over to the archway and follow it around to an opening in the wall.

Form here, drop down to the ground of this sunken corridor and climb out on the other end. The stairs lead down into a massive coliseum, and the Colossus is found in its center.

COLOSSUS VIII

In the center of the massive coliseum waits the next Colossus, a bizarre beast that has the armored tail and shell of a lobster and the ability to scale walls. This beast can also fire clouds of poisonous gas from its mouth that have a lasting, deadly effect on anyone who comes into contact with it.

WEAK POINTS

Legs, belly, chest

REST SPOTS

None

PREFERRED PATH

1. Run down three to four sets of stairs to get close to the bottom floor of the coliseum.

2. Find an opening or window and use the bow and arrow to shoot one of the creature's legs to get its attention and cause it to scale the coliseum wall in an attempt to get to you.

3. Avoid its poisonous blasts and take the remaining sets of stairs to get out into the center of the coliseum.

4. Quickly shoot two of the legs in the glowing areas to knock it loose from the coliseum wall and send it crashing down to the ground on its back.

5. Before it can right itself, quickly run up its tail, locate the first of two markers on its stomach and strike it a few times to eliminate it.

6. Repeat the steps to get it on its back once again. This time locate the second marker on its chest.

COLOSSUS VIII

THE BATTLE BEGINS

This armored beast can't be killed conventionally. You won't be able to climb and hang onto its fur, as a tough armored shell protects the Colossus. As a result, there is no need to rest and regain stamina during the battle. You must use a bit of cunning to eliminate it. The first goal is to get down to the lower levels of the coliseum. Locate the stairs and start heading down.

MAKE IT ANGRY

In order to defeat the this foe, you first need to get its attention. Find a window or opening and shoot at the glowing areas on its legs to get noticed.

As soon as the Colossus has you in its sights, it scales the coliseum walls in an attempt to get to you. Allow it to come up after you, but avoid its poisonous blasts. Once it has attached itself to the coliseum wall, dash down the final sets of stairs and enter the center.

Shoot the Legs!

Once it's on the wall, use the bow and arrow to shoot at the glowing areas of the legs. Two successful hits on different legs send it crashing to the ground, causing it to temporarily get stuck on its back.

The moment the creature is on its back, go in for the kill. Use its tail as a ramp to get onto its underside, then locate and attack the first marker, which appears near the tail on its belly as soon as you draw near with the Ancient Sword. A few strong stabs are all it takes to completely eliminate the marker, but there is still one left on the beast's chest.

BEWARE THE POISON

Watch for the poison attacks. These noxious gas clouds may not look like they are doing you any harm, but if you linger too long inside or near one, your health is depleted in seconds.

You definitely won't be able to take out both markers in one attack. The Colossus eventually rights itself, causing you to repeat the same steps of returning up the stairs, shooting it to force it to scale the coliseum wall, returning to the center and targeting its legs to cause it to fall, then attacking the marker.

The final stab sends the beast into its death throes. You can run from the tendrils, but there's no escape, only darkness.

COLOSSUS IX

The Path to the Colossus

The Path Revealed

Map Location: D3

Thy next foe is... The land where trees nary grow... It sleeps at the bottom of the lake... A rude awakening.

1. Use the sword to discover the path.

2. Ride Agro northwest across the small bridge to the left of the long bridge.

3. Continue to ride northwest, following the sun's path to the Colossus across the open plains.

4. Ride down into the dark valley and follow the cliff's edge to the left.

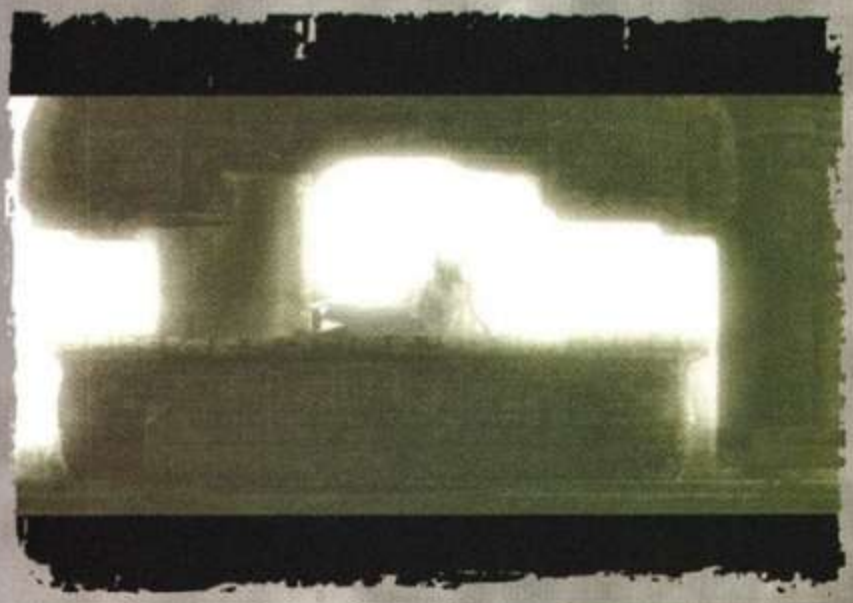
5. Cross the gap using the natural bridge next to the small crop of dead trees.

6. Ride past the geysers toward the far mountain walls.

7. Locate the large opening in the mountainside, home to the next Colossus.

To Find a Colossus

Darkness leads to pure, innocent light. Your beloved stirs, alive and well. You know this is a dream; it must be. You can't imagine waking to the nightmare that's waiting for you just beyond your closed eyes. The booming sound of another idol destroyed rips you from your sweet reunion. You know something's seriously wrong with your insides, but you won't stop until it's finished.



Hop on Agro and use the Ancient Sword to point out the direction of the next Colossus. Like many that have come before it, the journey for this Colossus starts to the northwest.

Ride across the left and much smaller of the two bridges and out onto the plains beyond. On the other side of the bridge, continue to use the Ancient Sword to remain on the right path—toward the ominous looking dark haze off on the horizon.

USE THE SAVE ALTAR

Stop and save your progress any time you come across a Save Altar. This saves you from covering old ground if you die during a battle.

Enter the Badlands

In order to reach your final destination, you must navigate down to the lower valley. Follow the small cliffs until they level off and you can continue your direct path toward the Colossus.

Bridge the Gap

Eventually, your path is impeded by a gap. When you reach this area, follow the cliff to the left to a crop of dead trees, which are withering next to a small stone bridge.

Cross over the bridge and ride toward the mountain in the distance. A gaping and ominous pitch black opening is where the next Colossus waits.

COLOSSUS IX

The ground shakes and trembles under the weight of the mighty Colossus. This armored beast fires deadly bursts of energy from its head, and is capable of crushing its prey underneath its heavy, cloven feat. In order to fell this beast, you must use both your weapons and the environment.

WEAK POINTS

Bottom of feet, top of head

REST SPOTS

Shoulders, ledge around head

PREFERRED PATH

1. Run away from the Colossus, keeping it in your view and dodging its energy burst attacks.

2. Locate the nearest geyser and lure the creature over it.

3. Ensure the behemoth is standing over the geyser when it erupts, which temporarily causes the hulking beast to go off balance.

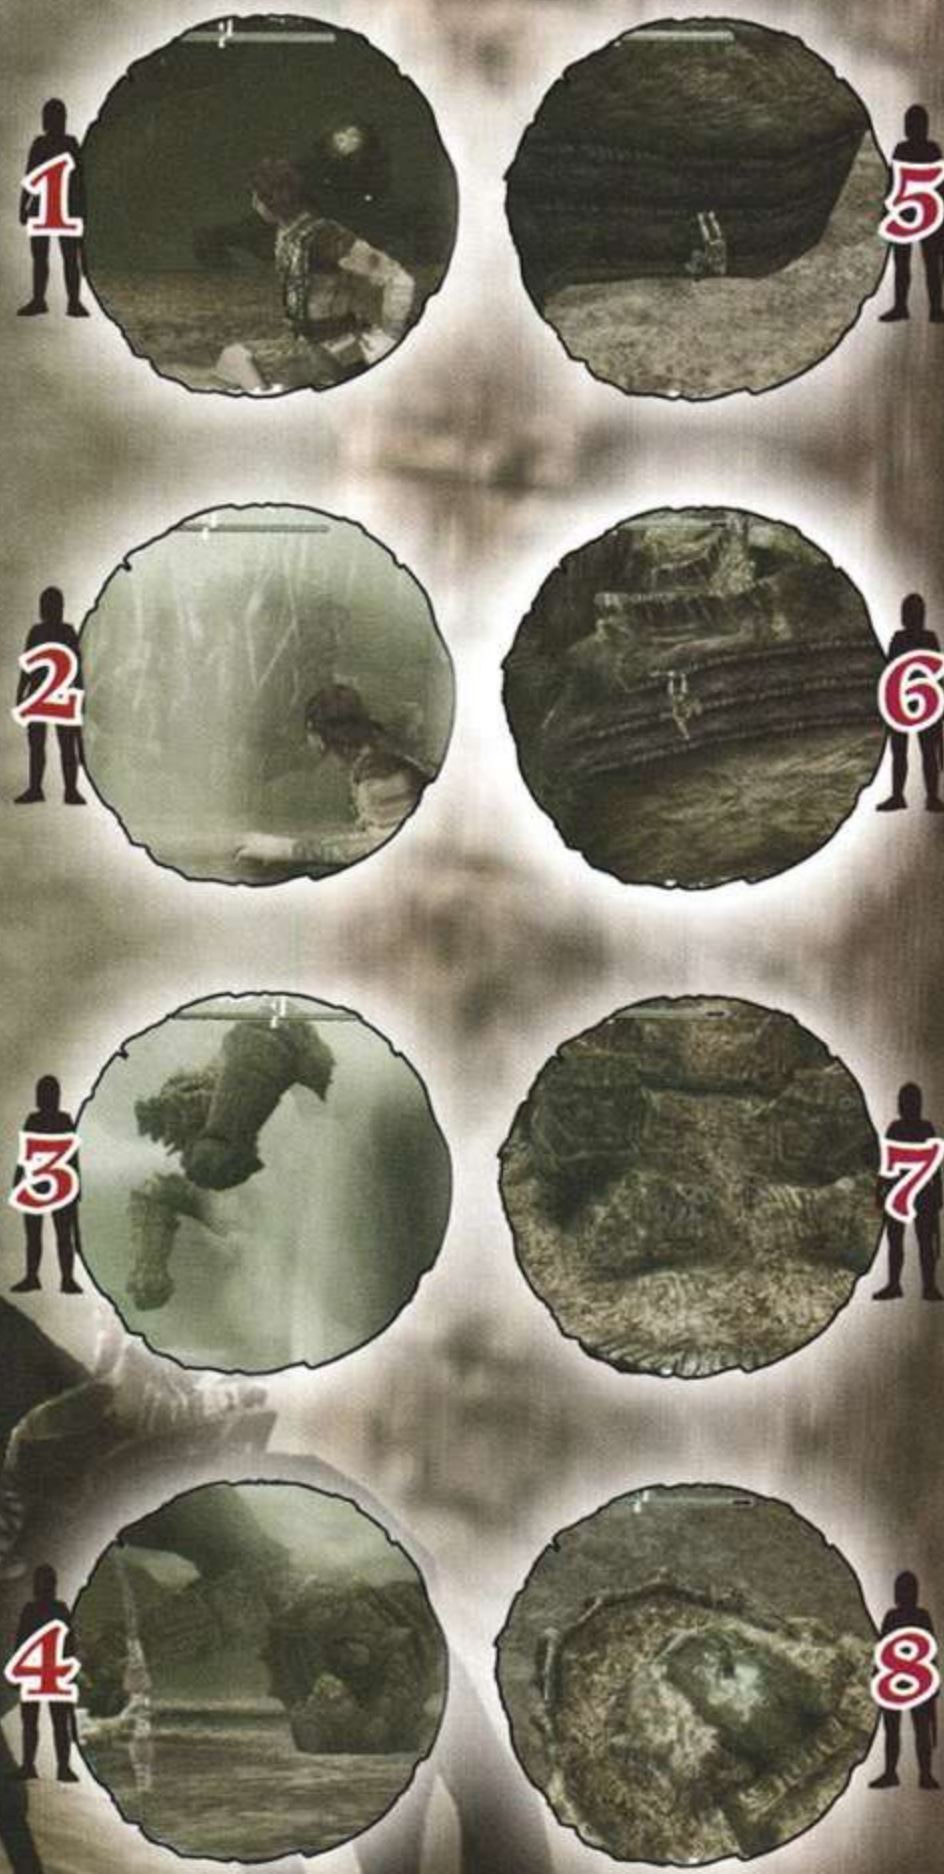
4. As soon as it has been pushed over to one side, shoot at the two glowing under soles of the feet on which it leans.

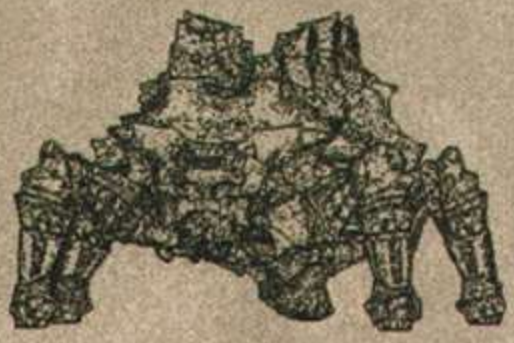
5. Before it can right itself, quickly run around to its belly and climb up the ridges to get to its furry underside.

6. Continue to climb straight up over its belly to the ridges on the opposite side and hoist yourself over to the creature's bony shell.

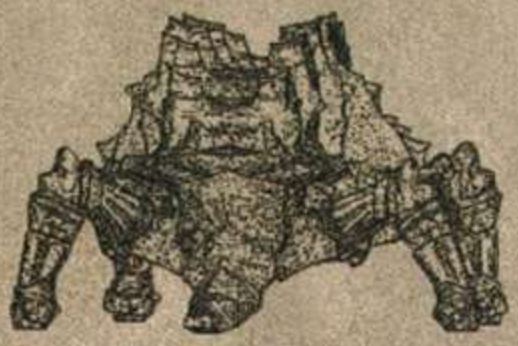
7. Wait for the Colossus to right itself, then run around to its back end and up the center of its back.

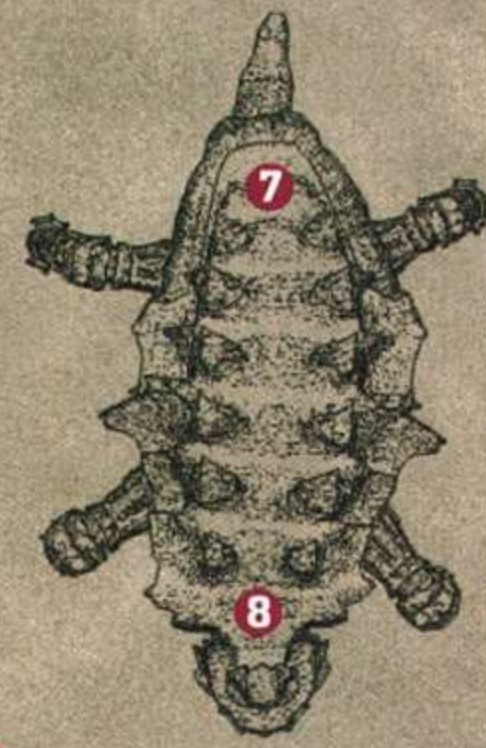
8. Carefully travel up the back of the shell to reach the marker at the back of its head.

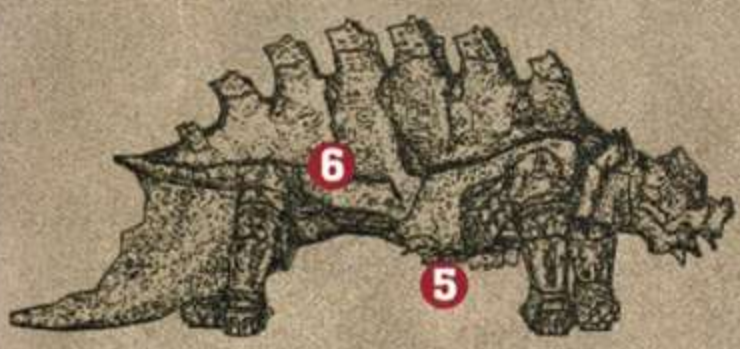




COLOSSUS IX







THE BATTLE BEGINS

Like the previous Colossus, this one is heavily armored and can't be killed outright with your conventional weapons. In order to get access to its marker, which is located on the top of its head, you must first get this beast on its back. The first order of business is to run away!

The goal is to lure the Colossus over one of the many geysers littering the landscape. In order to do so, get one in your sights and keep running toward it—the Colossus will likely follow.

The Colossus' Attacks

This slow and limbering beast is surprisingly lethal. This Colossus has a variety of attacks at its disposal, which should be avoided at all costs. The first is a series of energy bursts from its eyes. The second is using its massive shell to rain down huge boulders from the cave ceiling if you decide to venture in too close at the outset. Finally, once it's left the cave, it rears back on its hind legs and comes crashing down in an attempt to crush you underneath its massive feet.

GET NOTICED

If you find the creature is too far away or not responding to you, you can call out or whistle for Agro. The noise of your voice alerts the beast to your presence and it returns to the chase.

Once the beast is centered over a geyser and it erupts, it is tilted off kilter and collapses on its side. As soon as this happens, quickly get close and use your bow and an arrow to shoot the exposed, soft, green glowing underside of its feet.

After shooting both feet, the Colossus flips onto its back, giving you the opportunity to climb onto its belly. Quickly run around the beast to its front side, then jump and grab the small ledges to get to the fur above them.

Start climbing up its fur-lined belly, making a straight, vertical ascent to the opposite side. You won't find any markers here, but up top, you can leverage your position to get on the beast's back.

Patience!

Once you reach the other side of thestomach and have climbed onto the shell portion, wait for the beast to flip itself over so you can run along the edge of the shell and around to its backside.

A straight path up the middle of theshell leads to its one and only marker. It's a dangerous and unstable climb—the Colossus does everything in its power to shake you off its back—but if you are careful and don't stumble too far over to either side, you should be fine.

The Colossus' marker is located on top of its head. Get a firm handhold and start stabbing away at it. Since this is the one and only marker, it takes multiple strikes (at least ten) to eliminate it.

Rest Spot

Since you must stay on the beast's head for an extended period of time, plus it constantly bucks, whips and violently shakes its head in an attempt to knock you loose, you should break and regain your stamina before it gets too low. Retreat to the creature's shoulders or the ledge around its head and take a break before the Stamina meter become critically low.

Return to the battle and finish the task at hand. After several more strikes to the head, the Colossus is defeated and comes crashing down to the earth. You know what comes next.

COLOSSUS X

The Path to the Colossus

The Path Revealed

Map Location: B4

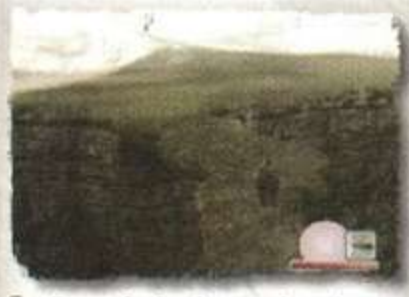
Thy next foe is... An isolated sand dune... Its tracks are well hidden... Shaking the earth, its gaze is upon thee.

1. Use the sword to discover the path.

2. Ride Agro west into the dark forest.

3. Follow the right wall to the first opening.

4. Follow the path through a series of tunnels.



5. Cross the bridge on the other side.

6. Ride along the open plains keeping the chasm to the left.

7. Continue to ride due west, following the cliff side, to a canyon wall.

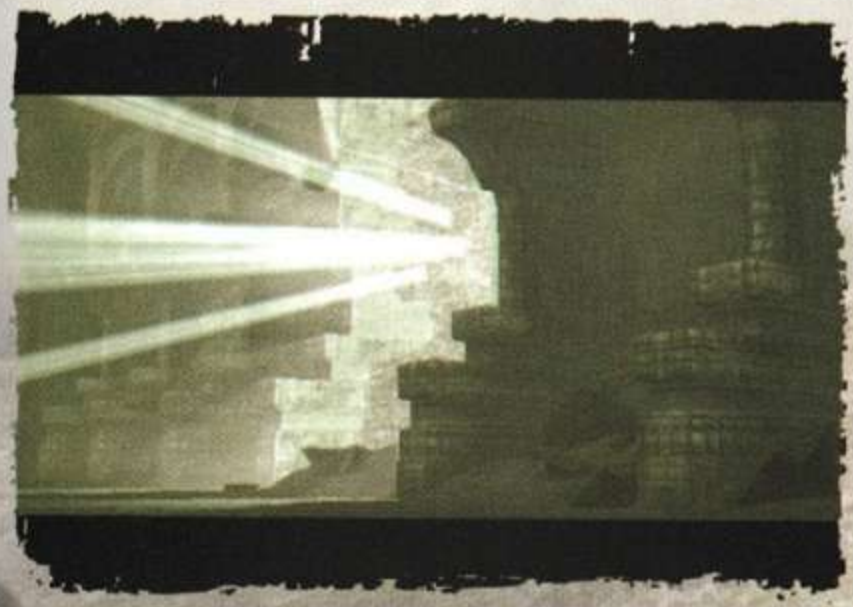
8. Follow the canyon wall and enter the opening to the left.

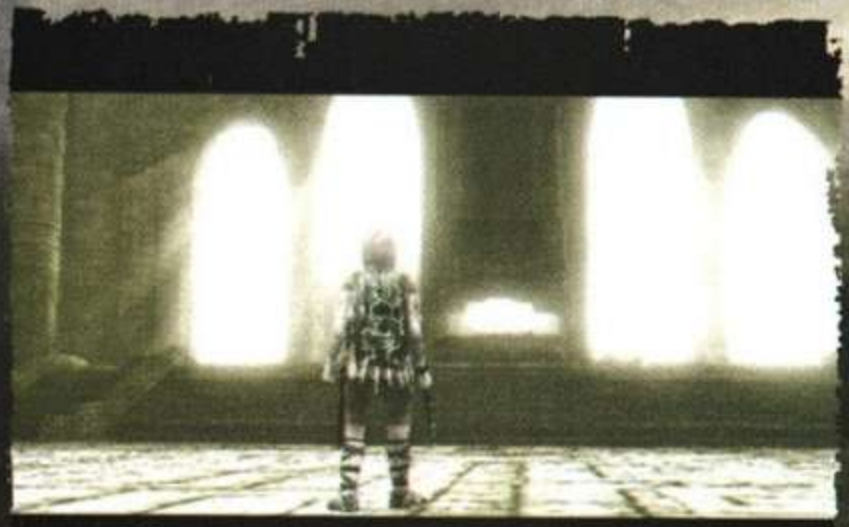
9. Continue past the Save Altar and into the cave beyond.

10. Enter the underground lair of the Colossus.

It Burrows Underground

Awaking to the sound of another idol destroyed, you slowly get to your feet, preparing yourself for yet another inevitable epic and brutal battle.





As you embark for the next Colossus, hold the Ancient Sword high to pinpoint its general location. This one can be found somewhere in the distance, due west.

The path to the Colossus leads through some familiar territory. Ride into the dark, densely shaded forest and stay to the right forest wall, using it as a guide to keep from getting lost or turned around.

Take the First Opening

Eventually, the wall opens up to reveal a small pathway. Take this opening and follow the path—it leads through a few tunnels and opens out onto the plains.

Locate the Lair

Continue your quest for the Colossus by riding across the small bridge and then heading to the west again. You can follow the cliffs to your left to keep you on track.

It's a long ride, but if you keep the cliffs nearby and stay on a straight path due west, you will arrive at the small, tree-lined hills far off in the distance.

Enter the opening between the hills and take the left path at the intersection. When you reach the other side, locate the Save Altar in the distance to the left.

A final ride through the cave beyond the Save Altar takes you to your destination—a huge, cavernous lair inside the mountain. Ride into the beam of light filtering from a hole in the ceiling to stir the angry beast below the sands.

COLOSSUS X

The dunes shift beneath your feet heralding the arrival of a burrowing, slug-like creature. It leaps from the sands and dives back underground, changing its course toward your direction.

WEAK POINTS

Eyes, lower back, mid back

REST SPOTS

None

PREFERRED PATH

1. Stay on horseback and get close to the Colossus so it gives chase.

2. Equip the bow and arrow, then turn around to face the Colossus and aim at it while Agro continues to run away.

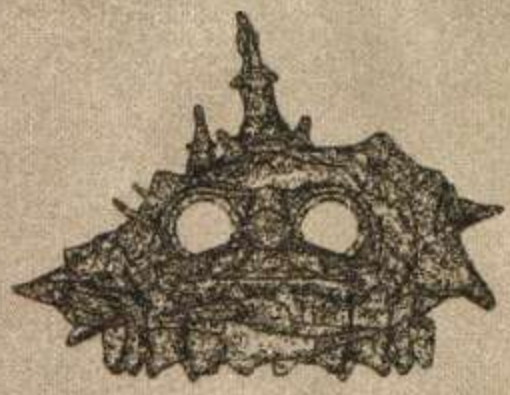
3. Shoot it in either eye to wound the creature.

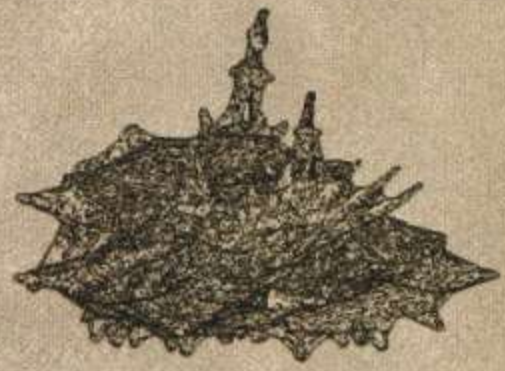
4. A few direct shots to the eye causes the beast to temporarily dive its head in the sand, exposing the marker on its mid-back region.

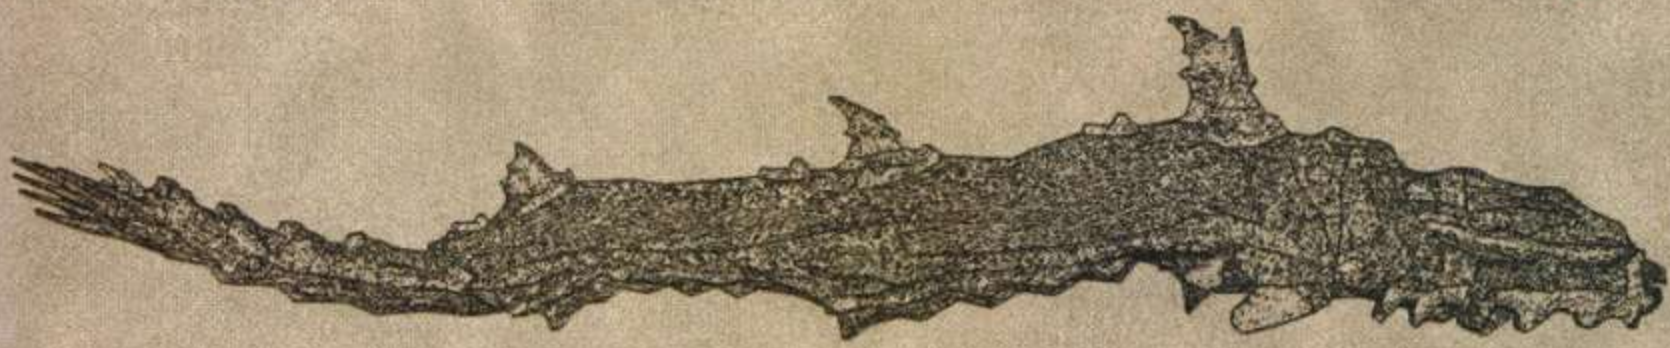
5. Before it can right itself, quickly ride or run up to the Colossus and climb its fur-lined back and go in for the attack.

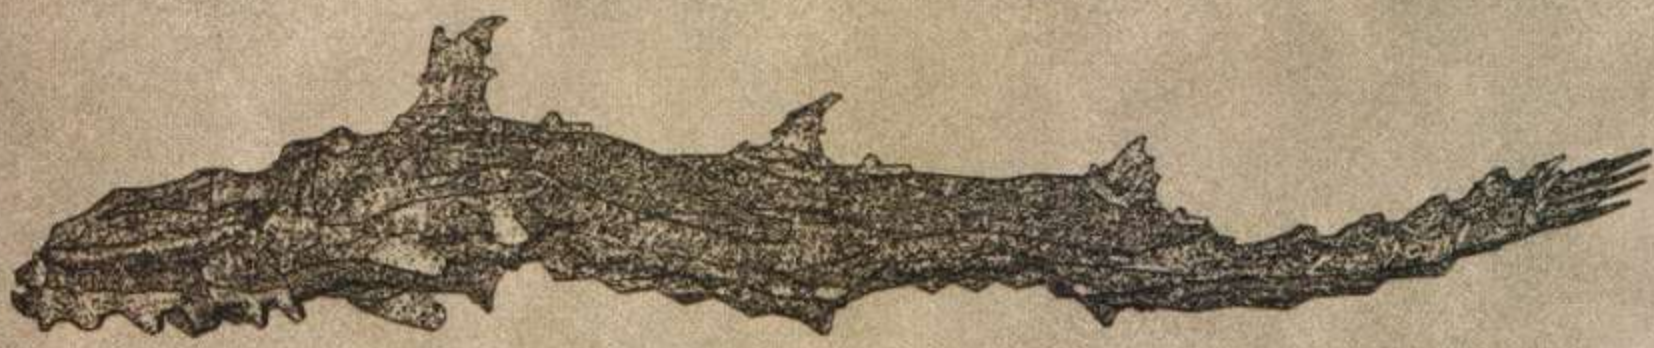
6. Repeat the above steps a second time to attack a second marker further up on the creature's back. Once both have been eliminated, the Colossus is incapacitated.

COLOSSUS X









THE BATTLE BEGINS

This Colossus is surprisingly fast and swiftly burrows just underneath the sand's surface. In order to kill it, you must first lure it into chasing you. Stay on horseback, get close (but not too close!) and quickly gallop the other way.

A QUICK TURN AROUND

Agro is an agile horse that can perform a few maneuvers of which you may not be aware. One such maneuver, which will come in handy during this battle, is the ability to execute a 180 degree turn from a full gallop. To pull this off, get him up to full speed and press down on the left analog stick and press ✕ two times in a row.

As soon as the Colossus has given chase, use the bow and arrow, turn around while riding on Agro, and aim at it. Its weak points are its eyes. Targeting them is a tough proposition however, as it constantly leaps in and out of the sand.

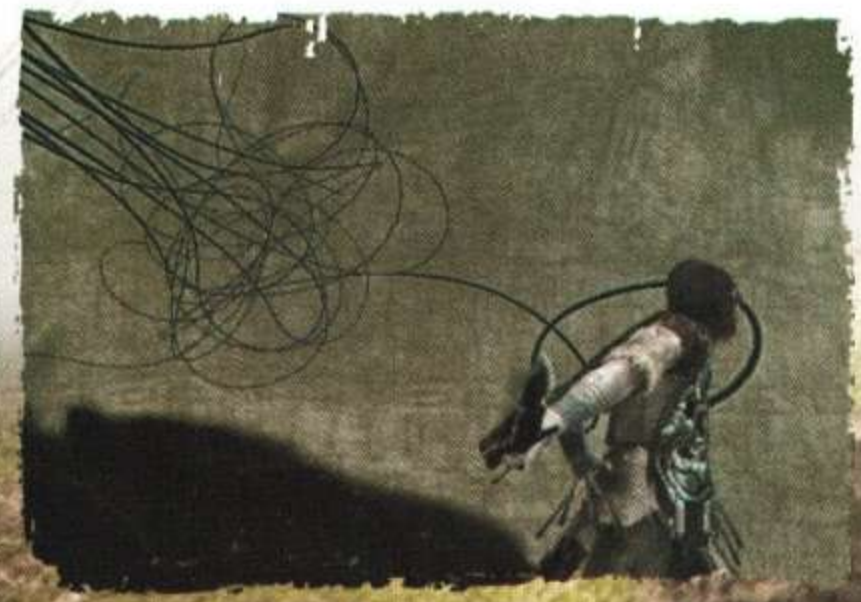
QUICK GAZE AIMING

It's really easy to get disoriented when you first pull up the bow and arrow. The best way to quickly locate the Colossus and automatically aim your weapon in its direction is to press and hold L1 while holding ● to aim it.

Once you've hit it square in the eye, it twists and writhes in pain and dives its head into the sand. As soon as this happens, the beast leaves itself exposed to attacks and you get a small window of opportunity to climb up its back to where the marker is located. Ride or run over to the creature and use your sword to stab it repeatedly.

Even if you successfully eliminate the first marker before the Colossus can right itself and return to burrowing under the sand, there still is a second marker located further up its back. Repeat the previous steps (let it give chase, shoot it in the eyes, climb up its back) then attack the second marker. It takes five strong stabs to wipe out the beast's remaining health.

The behemoth does not go quietly. Like the rest of the defeated Colossi, from its dead carcass shoot inescapable black tendrils that find their mark no matter how fast or far you run.



COLOSSUS XI

The Path to the Colossus

The Path Revealed

Map Location: F1

Thy next foe is... An altar overlooks the lake... A guardian set loose... It keeps the flames alive.

1. Use the sword to discover the path.

2. Ride Agro north across the long bridge between the broken stone arches.

3. Take the left path onto the plains and follow the towering arched bridge high above.

4. Cross underneath the arched bridge and continue riding to the north.

5. Locate the gaping chasm and the broken pillar, which marks a winding pathway to the bottom.

6. Run down the winding path and swim across the body of water at the bottom.

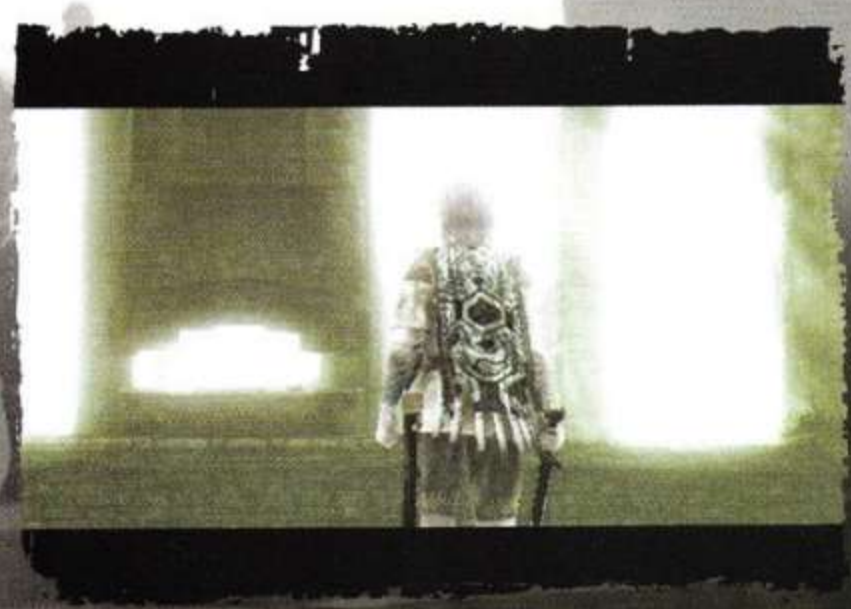
7. Head up the ramped path to the right and down the dark pathway.

8. Locate the entrance to the right at the end of the pathway where it dead ends.

9. Head inside the ruined area, then leap across to the platform with the columns on the other side.

Keeper of the Flames

The shadowy figures that stand around your tired, broken body seem to anticipate something that you don't yet understand. There's no time to ponder this troubling matter, as another idol is destroyed and another Colossus waits somewhere outside the Shrine's walls.



The Ancient Sword tells you that the next Colossus is somewhere to the northwest. The journey begins by taking the bridge between the crumbling stone archway.

At the opposite end of the bridge, stay to the left and continue to ride across the plains to the north, following the gigantic arched bridge high above.

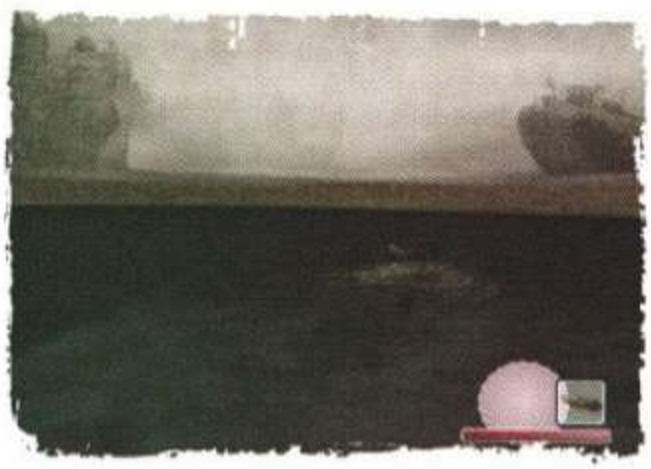
Follow the Bridge

Use the towering arched bridge to lead you directly to the location of the next Colossus. Cross underneath it so it is on the left and continue to follow it to a gaping chasm in the ground.

What Lies Below

Locate the broken stone archway at the top of the chasm—this monument marks the beginning of a sloping path that winds all the way down to the bottom.

Start the descent down into the chasm. When you reach the bottom, you must swim across a large pool of water.



To get up and into to the temple, take the ramp to the right, which leads to a darkened path between the chasm walls. It's tough to see down here, but if you follow the path until it dead ends, you can feel your way along the left wall for an opening.

An Alternate Route

There is a second way to get up into the temple. Locate the path to the left about halfway down the dark passage, then climb and jump up the stone ledges along the right wall.

Get Up to The Temple

The Colossus is somewhere inside the temple carved into the side of the chasm wall.

Inside the ruined temple, carefully walk to the edge of the ledge and then leap across to the platform with the row of stone columns at the far end. Hold ◻ when you jump, just in case you come up short and need to grab the ledge.

COLOSSUS XI

The moment you touch ground, the Colossus appears on a platform overhead. With an effortless leap, it lands in front of you and prepares to charge with its razor sharp horns.

WEAK POINTS

Back

REST SPOTS

Inside crevice between fire lamps

PREFERRED PATH

1. Make a mad dash for the closest fire lamp on either side of the temple and squeeze into the crevice between it and the wall.

2. Jump, grab and pull yourself up on top of the fire lamp.

3. Wait for the Colossus to ram the fire lamp, which causes a wooden plank that was sitting in the fire to fall to the ground.

4. Stay atop the fire lamp, wait for it to lunge at it again, the result of which temporarily stuns it, then drop down and pick up the plank before it recovers.

5. Jump and hoist yourself back up to the fire lamp and ignite the wooden plank.

6. Use the lit wooden plank to drive back the beast toward the opening between the stone columns at the end of the temple and force it over the edge of the temple cliff.

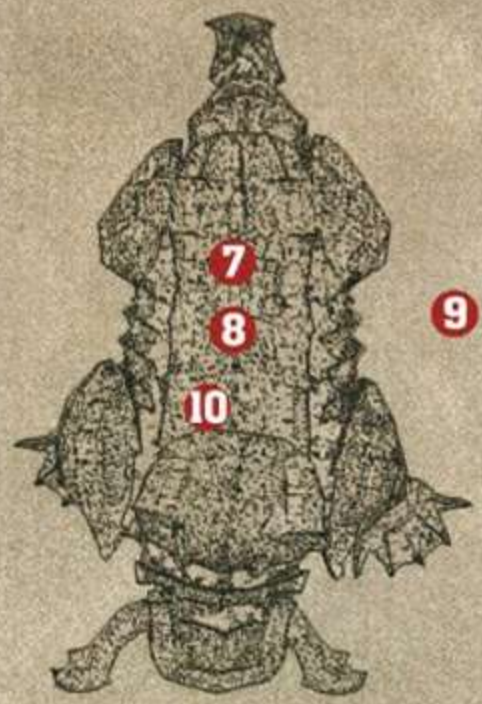
7. Switch to your sword and follow after it, dropping down to the ledge below and then jumping onto the beast's back.

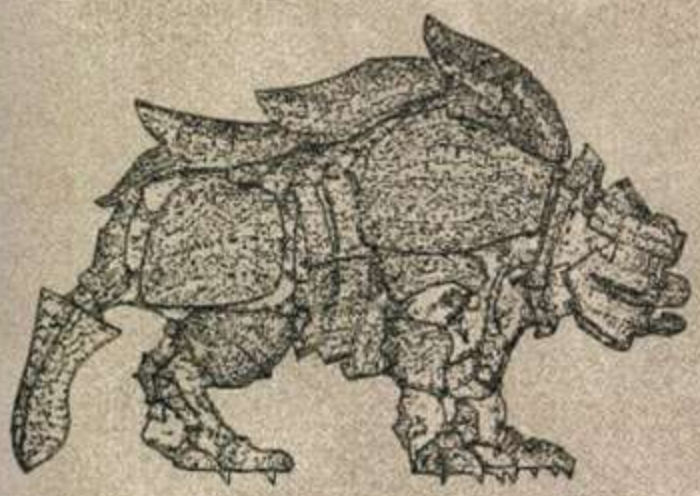
8. Grab hold and hang on as the Colossus bucks, kicks and whips you around, stabbing it whenever you have the opportunity.

9. Ride the beast all the way back to the temple and then jump back up to the fire lamp when you run out of stamina.

10. Wait for the Colossus to ram the fire lamp and then jump on its back while it's stunned to continue the battle.

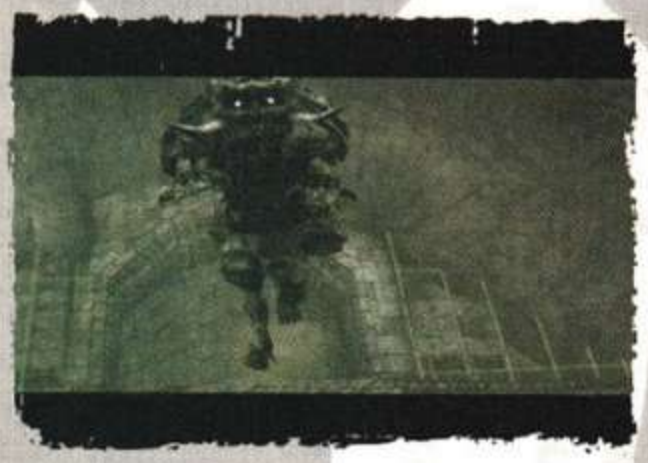
COLOSSUS XI





THE BATTLE BEGINS

This Colossus is a fierce and awesome beast. Its relatively small size allows it to be swift and agile, while its sharp talons and horns, and its solid rock head, make it extremely deadly and dangerous to anyone at the receiving end.



It's just too fast. There's no escaping or dodging this beast. If it rams you with its head and horns, you are sent sprawling across the floor, and you won't recover for at least three or four seconds, giving the beast the opportunity to do it again.

TAKE EVASIVE ACTION!

The only means of protection and escape is to wedge yourself in between one of the fire lamps and the walls it sits next to. While you can squeeze in there, the beast can't.

Because this Colossus is so fast and has impenetrable armor, you can't attack it conventionally. However, you can use the elements against it. Jump and climb up to the top of the fire lamp and hold tight as the creature will attempt to knock you off by ramming it.

Fight With Fire

The first time the beast collides with the fire lamp, it knocks a wooden plank sitting in the fire to the ground. Stay on top of the fire lamp, wait for it to ram it a second time and stun itself, then drop down and grab the plank by switching to the Hand Icon and pressing ● when standing right next to it.

Once you've acquired the plank, quickly jump back up to the fire lamp and press ● while standing next to the fire to set it ablaze.

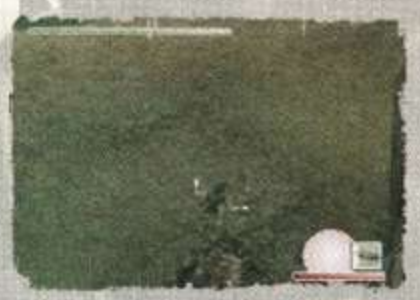
Equipped with your fiery plank, drop down to the ground and use it to push the Colossus back toward the temple opening and the sheer cliff beyond. To swing it, press ●.

DON'T GET TOO CLOSE!

Don't get overzealous and allow yourself to get too close. Even though it has an adverse reaction to the flames it can still lash out with its claws.

Continue to drive back the beast, carefully positioning it so it backs up between the opening in the stone columns. When it reaches the edge it falls backward and lands on its back on the ledge below, breaking off its armor in the process.

Follow after the fallen Colossus, who has landed on the bottom floor of the chasm and is temporarily stunned. Drop down to the first ledge, then position yourself so that you are lined up with it and jump down onto it below.



As soon as you land on the beast, get a handhold and don't let go. It comes to and starts to buck, kick, whip and do anything in its power to send you flying off its back.

You won't get much in the way of opportunity to execute strong stabs at the marker on its back, let alone quick ones. Do your best to continue to stab it between its lurching motions and don't let go until every ounce of your Stamina Meter has been drained.

Rest Spot

Continue to hold on and ride the Colossus as it runs and leaps around the chasm. It eventually returns back to the temple, where you can hop off, take refuge at a fire lamp and regain your stamina.

Most likely, you've only managed to whittle down the Health Meter by one-third. In order to continue to fight it, you must return to its back. Climb up onto a fire lamp, hold on and wait for the Colossus to ram it.

As soon as it is stunned, pull yourself up (the force of the impact will knock you over, but as long as you are holding L1 you won't fall off) then jump down onto its back and grab hold of its fur.

Once on its back, resume your attacks between bucks. This time the Colossus will stay in the temple proper, allowing you to easily hide and regain your stamina when you run out.

Repeat these steps at least once more until the Colossus is defeated. It slumps over and crashes to the ground, hemorrhaging black ooze as it falls. Next come the tendrils; darkness follows.

COLOSSUS XII

The Path to the Colossus

The Path Revealed

Map Location: G2

Thy next foe is... Paradise floats upon the lake... A silent being wields thunder... A moving bridge to higher ground.

1. Use the sword to discover the path.

2. Ride Agro to the northeast and head across the curvy stone bridge.

3. Continue to ride due northeast, past the Northeastern Plain Save Altar.

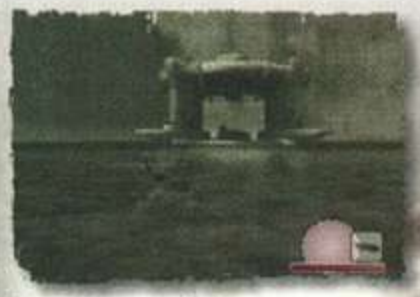
4. Cross the second stone bridge north of the Save Altar.

5. Enter the forest and take an immediate right to follow the path out of the forest.

6. Follow the mountain path to the waterfall.

7. Climb the steps, jump and grab the ledge of the pillar and shimmy around to the other side.

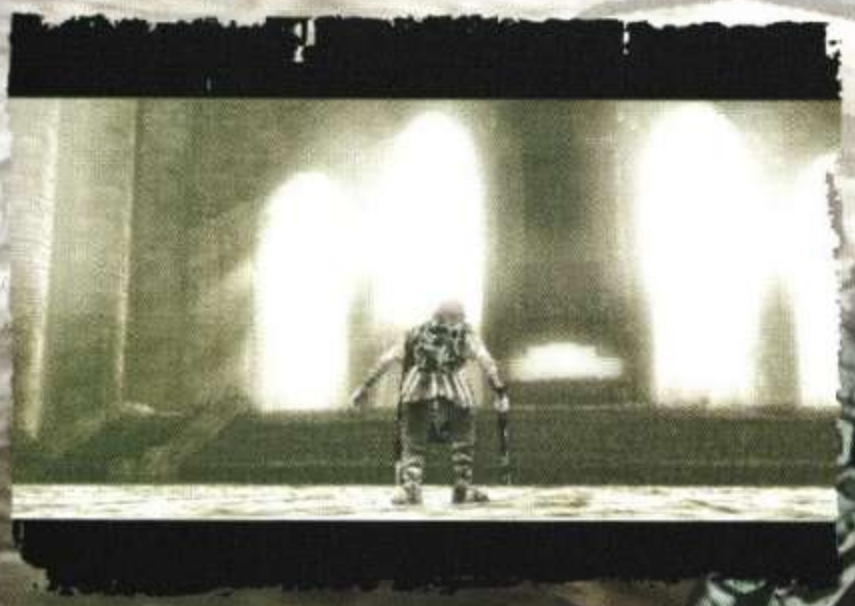
8. Drop onto the platform, then jump in the water and start swimming toward the opening in the distance.



9. Swim toward the nearest platform to stir the underwater giant.

Colossus of Thunder

You're changing. You can feel it. Is the price you must pay worth the cause? Will she know you when she wakes? These are questions only fools with the luxury of time can entertain. As you stir Dormin's booming voice delivers his next riddle.



A Pair of Bridges

According to the Ancient Sword, the path you must take lies along a northeast direction. Follow the reflected sunlight to the massive curvy bridge off in the distance.

Cross the bridge and continue to follow a path to the northeast. There is a Save Altar located close by that allows you to save your progress and rest before continuing.

A second bridge is not too far from the Save Altar. Ride across it and enter the forest beyond.

A Quick Exit

The path to the Colossus does not lie through the forest. As soon as you enter the thick woods, quickly steer Agro to the right, locate a second opening and exit the area.

Into the Water

Take the mountain path until you arrive at a tremendous waterfall. Dismount Agro and leave him here—you have some climbing to do on foot.

Grab the ledge of the stone pillar at the top of the small set of stairs and shimmy around its circumference until you reach solid ground on the other side.

Swim to the Opening

Unfortunately, there's no time for sight seeing. Jump into the water, steering clear of the waterfall, and start swimming toward the large opening at the back of the lake.

Inside this huge, watery area are a series of small platforms. Swim toward the nearest one to cause the giant beneath the water to stir and surface.

COLOSSUS XII

Your very presence wakens this colossal giant from its underwater slumber. This armored beast's massive head is crowned with rotted teeth and it possesses two horns that act as conductors for firing bolts of lightning at its prey.

WEAK POINTS

Teeth, Chest

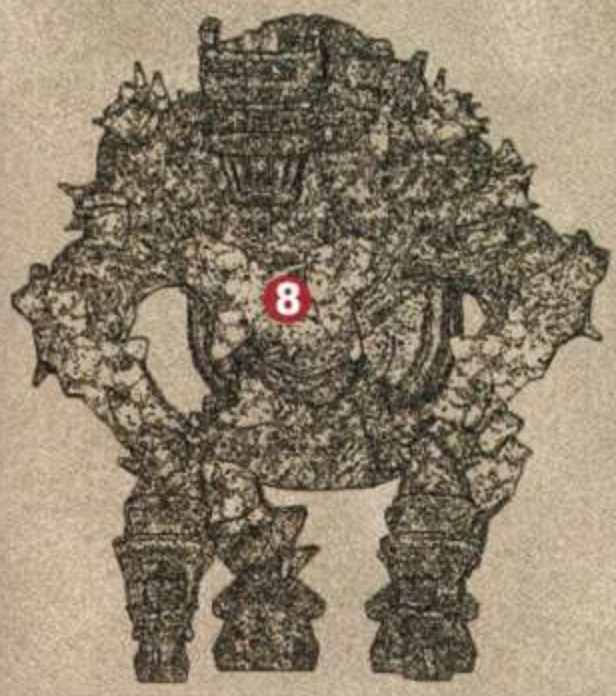
REST SPOTS

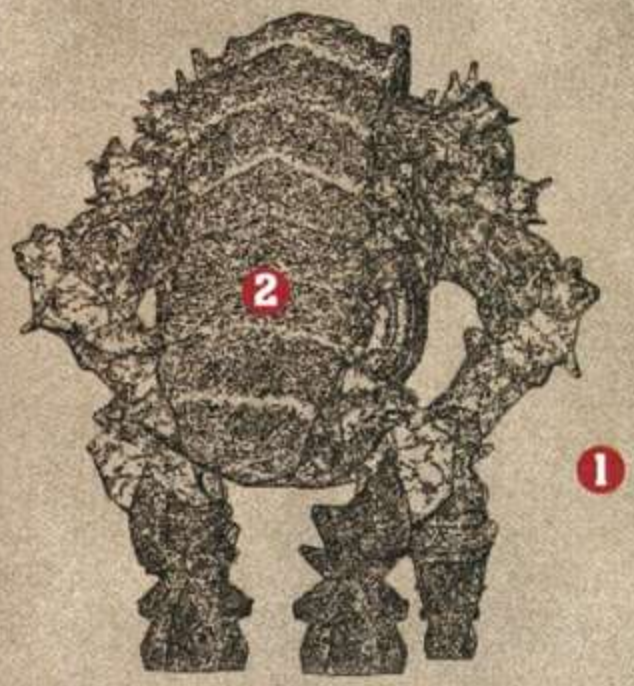
Top of head

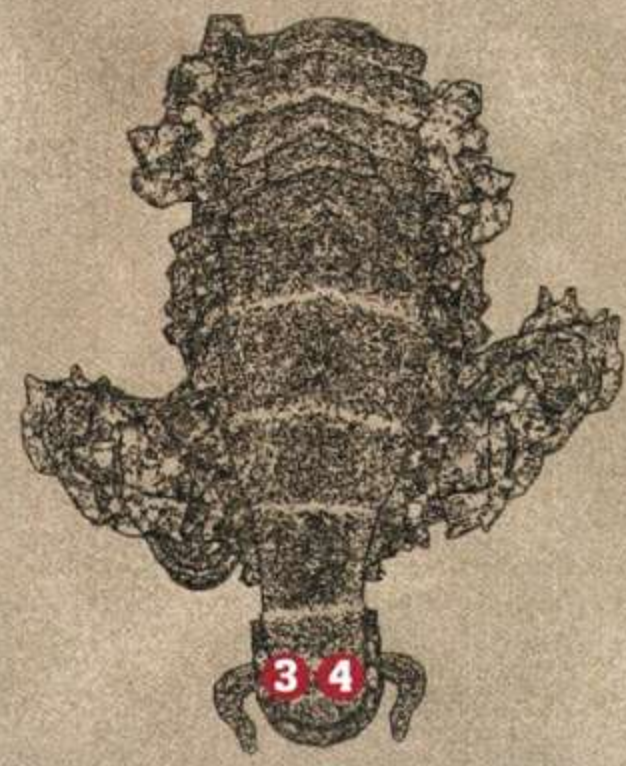
PREFERRED PATH

1. Swim around to the Colossus' back.
2. Climb up the mossy, fur-lined back to get up to its head.
3. Hang on at the top of its head until it stops thrashing about.
4. Strike at the rotted teeth on the top of its head to steer it toward one of the platforms.
5. When the Colossus' head is as close as it can get, leap across to the ceiling of the platform.
6. Fire arrows at the teeth with your bow to lure it over to the platform.
7. Continue to shoot at the Colossus until it rises out of the water and mounts the platform.
8. Quickly leap to the exposed marker on the Colossus' chest and attack.

COLOSSUS XII





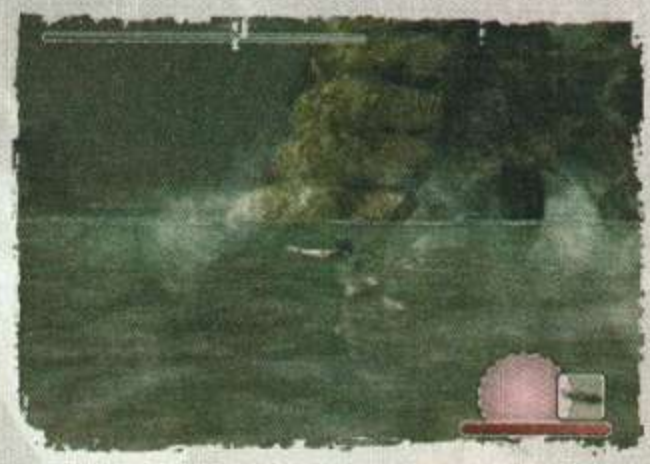


5

THE BATTLE BEGINS

This massive Colossus with a series of rotten teeth lining the crown of its head. It also has pair of horns growing out of the sides of its head that act as electrical conductors that can shoot deadly blasts of energy.

Jump in the water and swim around the creature in order to get to his mossy, fur-lined backside. This is the only way to climb onto the beast.



TAKE COVER

During your attempt to get to this Colossus, use the small pedestals on any of the platforms in the water to duck behind and take cover from his blasts.

Ascend the beast's back, hanging on tight during its attempts to shake you. When you reach the top, carefully move up its neck to the top of its head and continue to hang on until the Colossus stops its thrashing.

Strike the Teeth

The goal is to steer the creature over to one of the two-story platforms. You can do this by striking its exposed, rotted teeth. Striking the set on the left causes it to veer to the left, striking the set in the center causes it to go straight, and striking the set on the right causes it to turn to the right.

As soon as the Colossus' head is as close as you can get it to the platform, leap off of it from one of the openings between the teeth and onto the roof. Hold down ▲ until you land—the longer it is held down, the farther you jump.

From this high vantage point, start shooting at the Colossus' exposed teeth with your bow and arrow. While you won't injure the beast, you should irk it enough to get its attention and lure it back over to the platform.

AVOID THE BLASTS

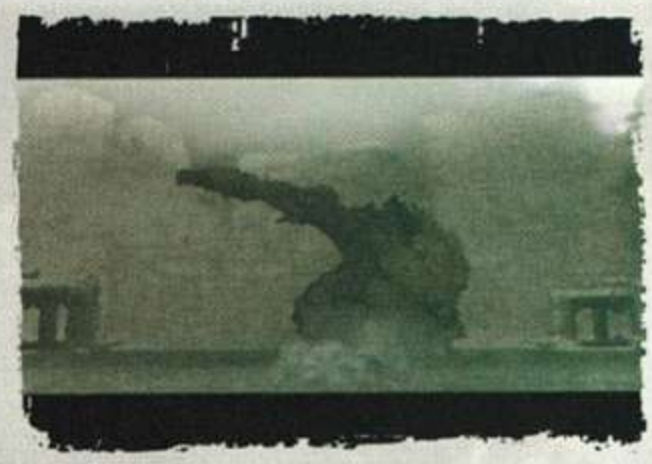
As soon as you see the horns begin to crackle with electricity, duck behind the pedestal to avoid getting struck with a deadly blast.

Eventually, your efforts pay off and the Colossus rises up and mounts the roof of the platform with its front feet, exposing a soft patch of fur on its chest. As soon as it does, leap off the platform and grab on—the marker reveals itself.

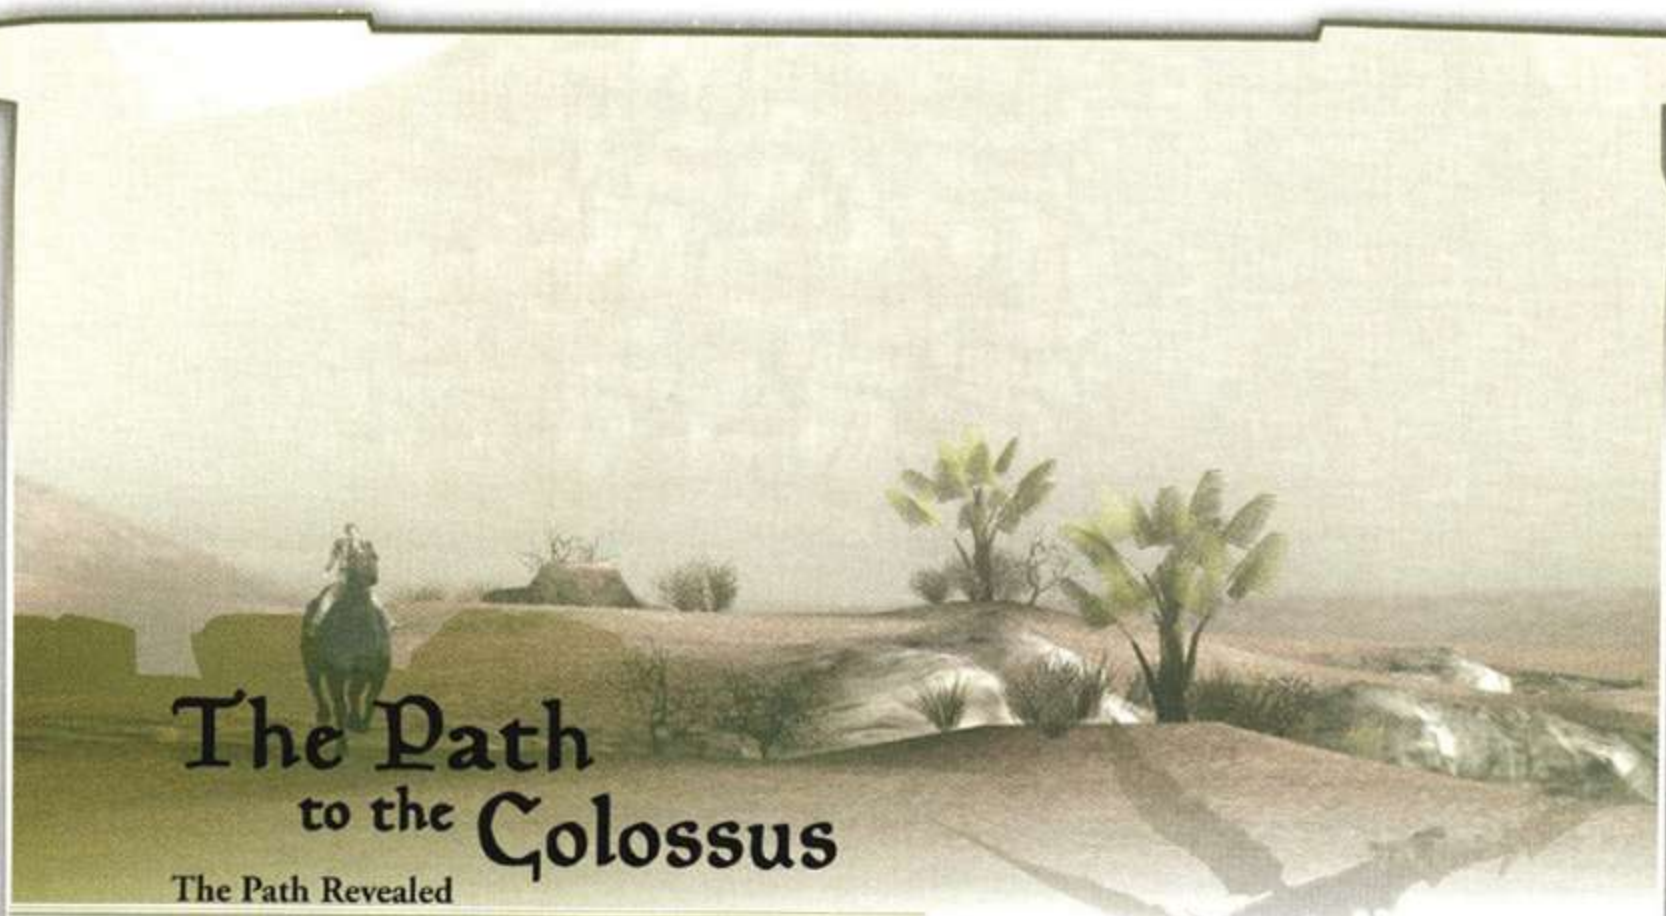
Repeatedly strike the marker with strong stabs. Unfortunately, you won't be able to fell the beast in time, as it submerges itself back in the water after a few moments. It also crashes into one of the platforms, causing it to crumble into the water, leaving you with one fer from which to mount an attack the Colossus.

Repeat the process all over again. Swim to the creature's back and climb up to its head. Steer the Colossus to one of the other platforms. Leap onto the platform and shoot the Colossus with arrows until it mounts the platform. Finally, jump onto its chest and stab the marker.

After one or two more attempts, the Colossus is defeated. The gigantic behemoth crashes into the water and sinks to its watery grave. As you rise to the surface, the black tendrils find their target, leaving your lifeless body floating on the surface.



COLOSSUS XIII



The Path to the Colossus

The Path Revealed

Map Location: E6

Thy next foe is... The vast desert lands... A giant trail drifts through the sky... Thou art not alone...

1. Use the sword to discover the path.

2. Ride Agro to the southwest toward the dark forest.

3. Enter the forest, follow the right wall and take the second opening.

4. Exit out onto the plains, ride down to the lower portion and ride to the south.

5. The ancient ruins in the middle of the sandy plains are your final destination.

6. Ride onto the platform in the center of the ruins to summon the Colossus

The Masked Men

Somewhere outside the cursed land, the thunderous sound of hooves pounding the ground announces a band of men on horseback. These mysterious masked men are on a desperate mission. Their final destination is the shrine where you continue your quest to eliminate the Colossi.

What's happening to You?

You may or may not have noticed that you are slowly changing in appearance. In addition to your clothes becoming tattered and filthy, your hair has slowly turned from brown to black and your face and body has become scarred and etched with angry dark lines.

The Flying Serpent

Start the search for the next Colossus by raising the Ancient Sword in the air and pinpointing its general location. This one is to the southwest.

The path to the Colossus leads back to the dark forest. As before, keep the right wall in sight in order to keep your bearings and head down the second opening.

When the path opens up on the other side, ride down to the lower level of the plains and then chart a path due south. The final destination is the ruins way off in the distance.

Ride Agro onto the center platform in the middle of the ruins to summon the next Colossus—a huge winged beast that bursts from underneath the dunes and rockets high into the sky.

COLOSSUS XIII

This Colossus is a serpentine creature with multiple wings, giving it the ability of flight. Sections of bulbous, gas-filled sacks located along the length of its underside help keep the Colossus airborne.

WEAK POINTS

Gas sacks along underside, sections underneath top flap, mid flap, rear flap

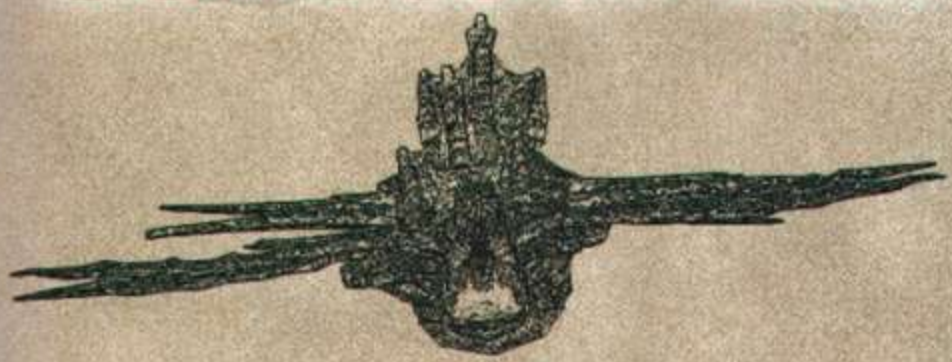
REST SPOTS

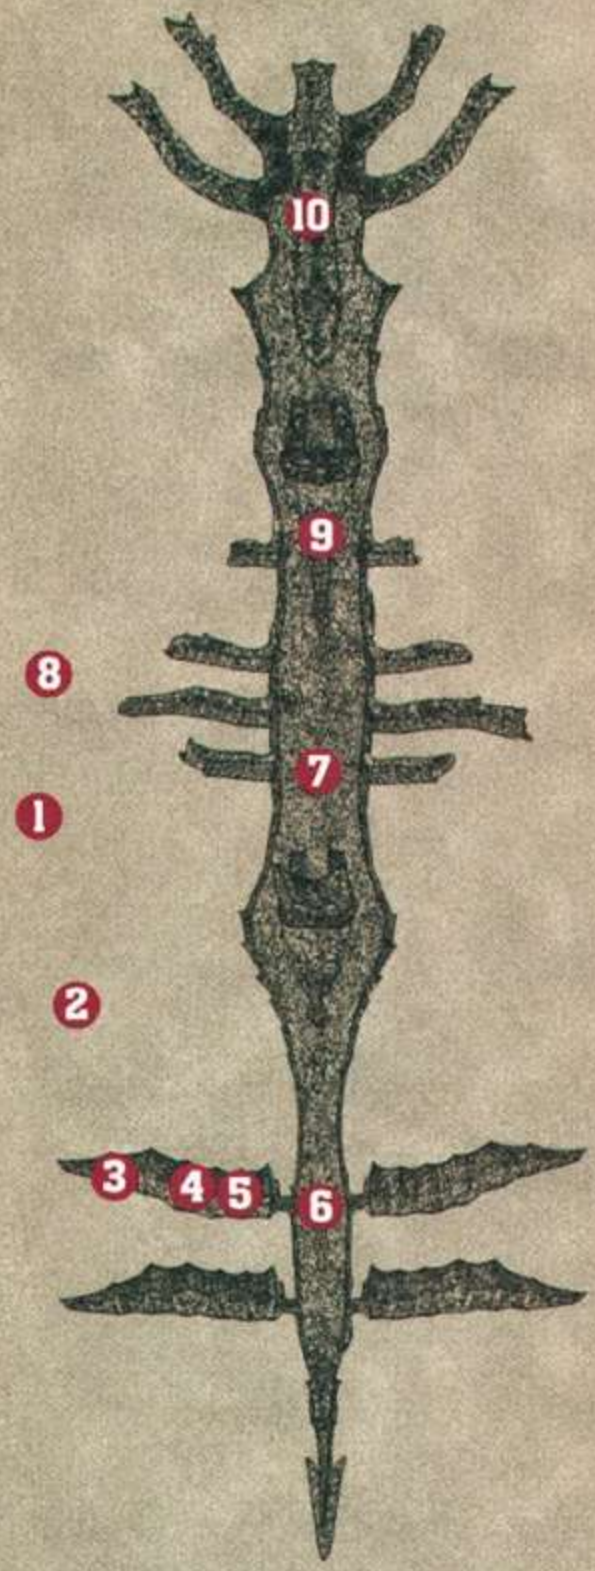
Back (when upright)

PREFERRED PATH

1. Shoot all three sets of gas sacks.
2. Give chase on the back of Agro.
3. Catch up to either set of front wings dragging through the sand and leap onto one, grabbing its ridges.
4. Hang on to the wing and jump up a few to get to the middle portion.
5. Continue to grab hold and wait for the Colossus to take flight.
6. Run up the length of its wing when it's safe and upright, then leap onto the Colossus' fur-lined back.
7. Carefully navigate down its back and locate the first of three markers, underneath the raised center flap.
8. Eliminate the marker, then jump off the creature's body as it dives into the sand.
9. Repeat the above process and destroy the second marker underneath the middle raised flap.
10. Finish off the Colossus by repeating the steps one last time and destroying the third and final marker underneath the flap near the tail end of the beast.

COLOSSUS XIII





THE BATTLE BEGINS

The Colossus slowly flies through the air, supported by three sets of gas-filled sacks that are attached to its underbelly. These are your first targets as deflating them brings the serpentine beast close to the ground.

Shoot the Sacks!

Stay on the back of Agro and use the bow and arrow to shoot out the gas sacks. Allow for the trajectory of the arrow, as well as anticipate where the Colossus will be when the arrow reaches and whether or not you are also in motion. A good rule of thumb is to aim a bit in front of the sacks, so that the arrow will find its mark when it arrives at is destination.

STAND UP

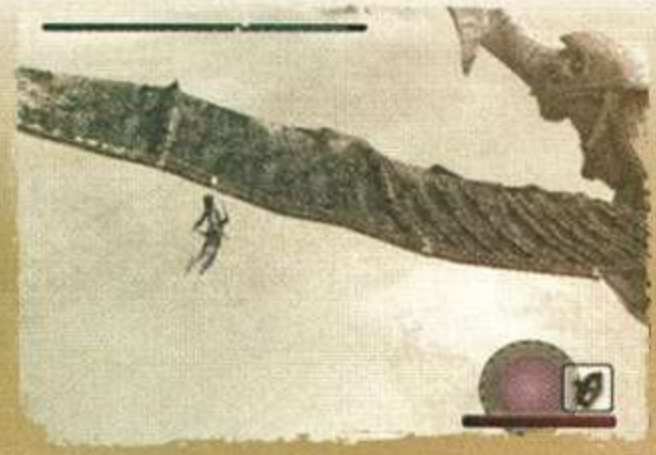
It's actually possible to stand up on Agro while he's galloping. Perform this maneuver by pressing and holding L1 plus ✕. While there's no benefit by doing so, it sure does look cool.

GIVE CHASE

As soon as all three sets of gas sacks have been deflated, the creature descends toward the ground, giving you an opportunity to get onto any of its four front wings. Using Agro, gallop toward the Colossus.

Gallop alongside its wings. When you're close enough and are in a solid position, leap off of Agro and grab one of the wing's bony ridges.

Hang on and jump up a few ridges to get near the center of the wing then wait for the Colossus to rise back into the air. Don't let go or try to navigate up the wing until it has leveled. The creature can and will turn upside down and twist and turn its wing, making it an unstable platform on which to walk.



ON THE SERPENT'S BACK

As soon as it's safe, leap over to the fur-lined back and locate the first of three markers along the length of its back. The first one can be found underneath the flap. Quickly get underneath and stab it at least three times to completely eliminate it.

Once you've eliminated the first marker and have returned to the ground, you are equipped with the knowledge on how to take out the other two, which ultimately brings down the beast. Repeat the process of shooting the sacks, riding to its wings, jumping on and grabbing hold, then getting on to its back.

HANG ON!

Be ready for any quick maneuvers while riding on the creature's back. Once you've eliminated a marker, it tries to get you off its back by corkscrewing through the air. Hold on and don't let go.

The final two marker locations are behind the two other flaps. The second flap is located in the center section of its body and the third is near the tail

Once the final marker is eliminated, the Colossus crashes to the ground, spurting the familiar tendrils that pierce your body and cause you to choke and vomit on their dark energy.

Going Down

One way or another, the Colossus wises up to what you're up to and closes its flaps, taking a head dive into the sandy dunes below. When this happens, you won't be able to continue attacking it and must jump off before it's completely submerged in order to avoid taking damage.

COLOSSUS XIV

The Path to the Colossus

The Path Revealed

Map Location: C2

Thy next foe is... A guardian set loose... A closed off city beyond the channel... It lusts for destruction...

1. Use the sword to discover the path.

2. Ride Agro to the northwest across the small bridge.

3. Ride across the open plains toward the Round Stone Hill Save Altar to the northwest.

4. When you reach the foothills, follow the cliffs and cross the bridge into the barren, geyser-filled sector.

5. Pass the cave where you fought Colossus IX earlier and locate the ruddy land bridge to cross the gap.

6. Once across the gap, alter your path and ride north, toward the opening in the mountain walls.

7. Veer left where the path intersects and continue to ride through the barren gorge.

8. Follow the small stone pillars at the end of the gorge.

9. Enter the cavern at the end of the path and dismount Agro when you arrive at the indoor lake.

10. Swim across the lake and continue moving through the cavern.

11. Follow the tunnel to the entrance to the lost city.

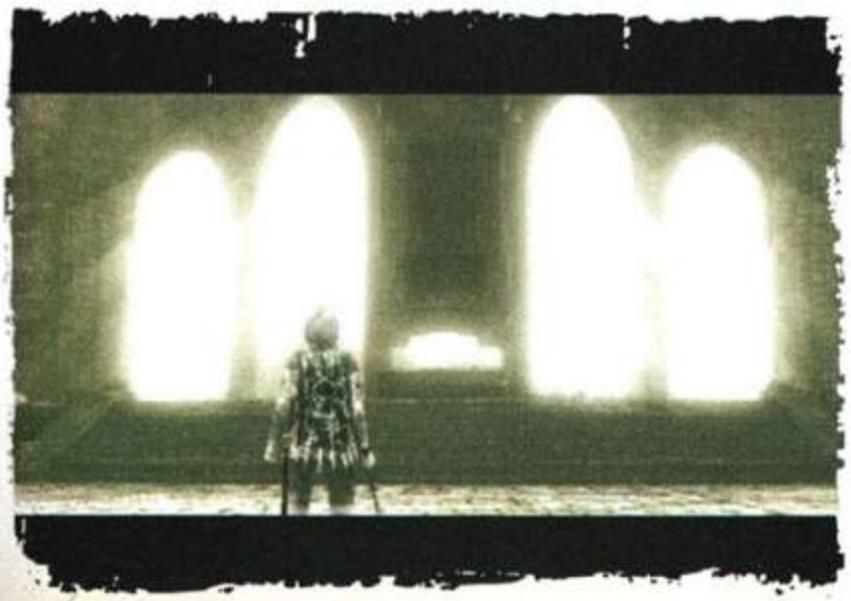
12. Walk out onto the platform, take the small set of stairs on the left side, then climb down to the courtyard dropping from ledge to ledge.

13. Exit the courtyard through the small opening in the front wall, then jump and climb up the fallen column.

14. Hoist yourself up to the grassy area and run toward the temple staircase off in the distance.

Keeper of the Gates

The end is near, yet you feel as if it may never come. You've held to your end of the bargain and have slain 13 of 16 Colossi. Will Dormin fulfill your desperate wish? These answers should come in time. For now, you must concentrate on your next foe.



As usual, take a moment to pinpoint the general direction of the next Colossus. According to the sunlight reflected off of the Ancient Sword, its location is somewhere in the general direction of the northwest.

Cross the smaller of the two bridges (the one to the left of the broken arch bridge), then stay on a northwest course—use the Save Altar off in the distance as a guide.

Continue riding to the northwest. You need to deviate a bit due to an outcropping of small cliffs that are too steep for Agro to ride down. Just follow each one's edge until it slopes onto the plain and then pick up the path again.

Continue past the gaping cavern (home to the now deceased Colossus IX) and follow the mountains until you reach yet another gap. If you keep it to your right, you eventually come to a small, rust-colored land bridge.

Return to the Badlands

When you reach the dark, barren area, locate the bridge to cross the gap and enter the geyser-filled area where you fought Colossus IX earlier.

Reorient yourself with your sword and locate the opening to the gorge along the right side of the mountains to the north.

Take the Left Path

There are splitting pathways inside the gorge. To stay on track and locate the Colossus, stay to the left.

At the end of the gorge, you come out onto a mountain pass lined by small stone pillars. Follow this path down into a huge lake-filled cavern, dismount Agro and swim across to the other side.

The Lost City

The tunnel eventually opens up onto a huge ruined city, filled with fallen columns, crumbling walkways and overgrown courtyards. The beast you seek is somewhere nearby.

The first goal is to get down to the courtyard. Along the left side of the platform is a small walkway that leads down a set of stairs. At the bottom is a wall with a series of ledges, which you can use to grab and drop all the way to the bottom.

Exit the courtyard through the small opening in the front wall and head down the stairway toward the fallen column along the left side.

Grab the edge of the column and hoist yourself up to a narrow channel. From here, run to the opposite end of the channel and climb out onto the grassy surface. You find what you're looking for at the top of the temple stairs—or, more correctly, it finds you.

COLOSSUS XIV

This Colossus is a dog-like creature with ultra fast reflexes and a solid stone head that it uses to ram and crush its prey. The guardian of the Lost City, it doesn't take kindly to the invasion of its territory and will swiftly charge and attack.

WEAK POINTS

Back (after armor is broken off)

REST SPOTS

None

PREFERRED PATH

1. Climb up onto the fallen column then jump from the broken edge and grab the elevated walkway in front of it. From here, run to the end of the walkway and jump and grab the top of the broken wall beyond and hoist yourself up.

2. Jump from the end of the wall to the walkway below, then jump and grab onto the column at the end of the walkway. Climb up to the top and shoot the Colossus with your bow and arrow to make it charge the column, knocking it over on the second attempt.

3. Jump from the fallen column to the next walkway, run down its length, leap across the gap, and hoist yourself up to the top of the adjoining wall. Leap off the small ledge of the wall and down to the walkway, then jump over to the column and climb up to the top.

4. Shoot the Colossus to cause it to ram the column twice and knock it over, then leap from the end of the fallen column to the standing one next to it then climb to the top.

5. Repeat the process of shooting the Colossus with your bow and arrows and jumping from the knocked over column to the next. This column falls next to an elevated walkway. Leap and grab its ledge, then jump and grab the next column at the end.

6. Shoot the beast once more so it will knock down the column you are on, then jump from its end to the next walkway. Next, position yourself in the center of the walkway and jump across to the tower to the left.

7. Climb up as high as you can get, shimmy around to the left or right and hoist yourself onto the platform.

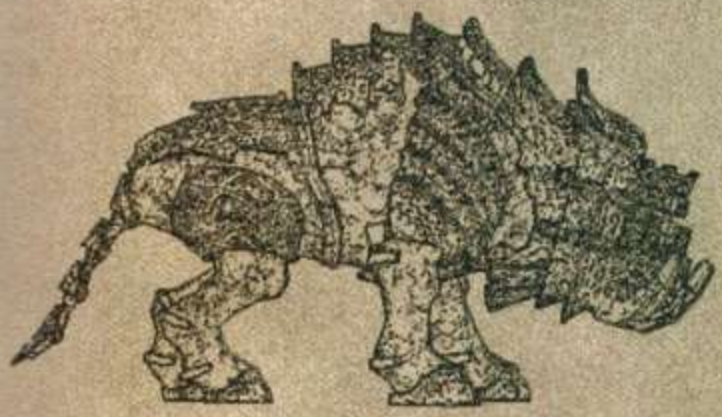
8. Leap over to the final column and make the Colossus ram it twice to send it crashing down into the wall of the courtyard where you originally entered.

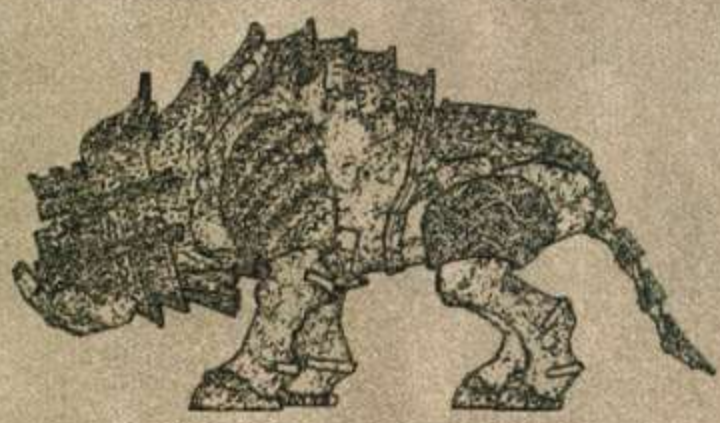
9. Quickly run and return to the ridged wall where you climbed down earlier and climb back up. Shoot the Colossus from atop the platform to make it ram the support column, sending it crashing down on its head and back, breaking off its armor in the process.

10. Leap on the beast's exposed back and stab the exposed marker to eliminate it.

COLOSSUS XIV

1 2 3 4 5 6 7 8 9





THE BATTLE BEGINS

The Colossus is equipped with bony armor along its sides and back, making it impossible to effectively attack it in its present state. It also is inhumanly fast and will charge at you, sending you sprawling across the landscape if given the chance. The first thing must do is find higher ground—fast!

The best bet for survival is to jump, grab and hoist yourself onto the nearby fallen column. Not only should it keep you from getting hurt (continue to hold ◻ you're on it), but you can also use the column to get up to even higher ground.

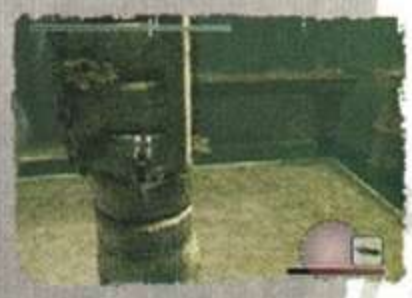
DOMINO EFFECT

In order to be able to fell the creature, you must weave through an elaborate maze of columns, walkways and ledges, all while using the beast's mindless attacks against it. Start by leaping over to the elevated walkway and grabbing its ledge, then jumping and grabbing the top of the wall at the opposite end.

HOLD ON!

The Colossus continues to follow and ram any object you set foot on, so be prepared to grab a ledge when this happens. One solid ram from its head can send you tumbling back down to the ground.

Run along the top of the wall and leap off its end, down to the walkway on the right. From here, run down the walkway's length, then jump, grab and climb up the column beyond.

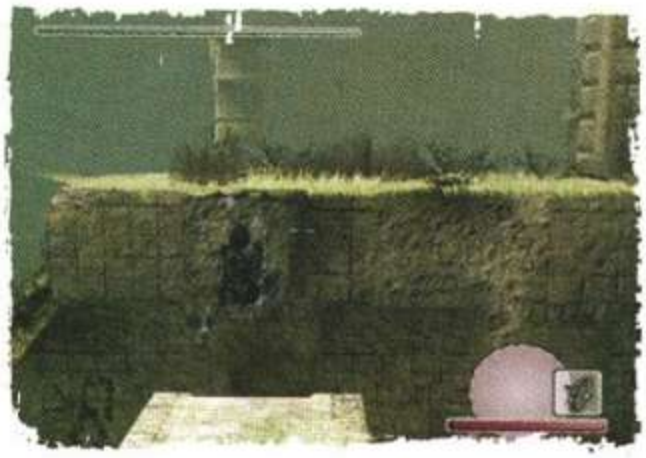


Shoot to Annoy

Once you've reached the top of the column, equip your bow and arrow and shoot at the Colossus. While its armor protects it from any mortal wound, your arrows serve more as an annoyance, causing the beast to ram the column.

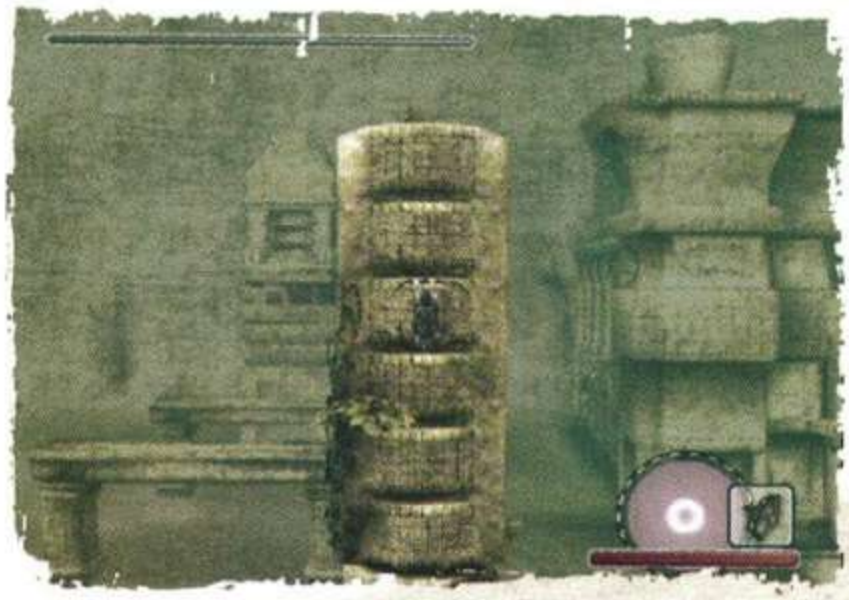
All it takes is two good rams to send the column toppling over. Hold ◻ to keep a handhold as it slams to the ground.

The toppled column provides a new path for you. Run to its end, leap up, grab the elevated walkway and hoist yourself up. From this position, run to the right, leaping across the gap in the walkway, then hoist yourself up to the wall at the other end.



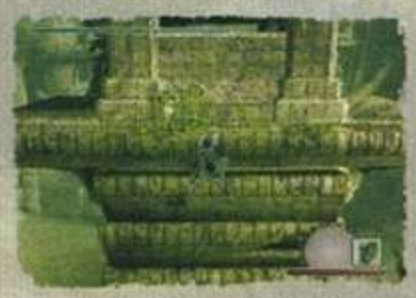
Locate the small ledge sticking out of the wall toward a walkway below, then jump down from its edge. At the end of this walkway is a second column—jump and grab one of its crevices and then start climbing.

Use the bow and arrow once again to cause the beast to knock over the column. As soon as the dust settles, jump off of the fallen column and onto the next. Repeat these steps a second time on the next column.



This column lands in front of an elevated walkway. Jump and grab its ledge, pull yourself up, then run to the opposite end and leap to another column. Repeat this process again.

Clamber up to this final walkway and jump from its center to the tower on the left. Climb and shimmy around until you can pull yourself up onto its platform where a final column beckons.



BREAK ITS BACK

Shoot the Colossus one more time to bring this column down—this time it smashes into the courtyard wall, creating a large opening wide enough for the beast to get through.

Make a Run for It!

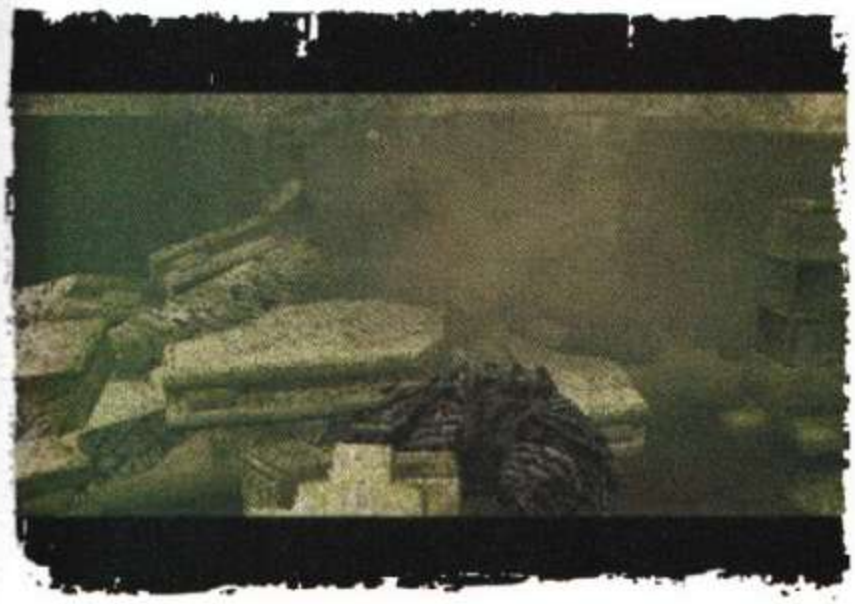
Don't hesitate! As soon as you can start running, make a beeline back to the ridged wall inside the courtyard where you originally dropped down. If you linger even slightly, the creature will catch up to you and send you flying through the air.

Climb back up to the platform, then agitate the beast a final time by shooting it with arrows.

WHISTLE!

Even though Agro is nowhere near, you can still whistle. Use this trick to get the attention of Colossi if they wander off.

When the Colossus rams the support pillar holding up the platform the whole thing comes crashing down on it, breaking off a chunk of its back armor in the process and exposing its marker.



Find an elevated piece of rubble or column on which to wait, then let the beast get within attacking range. You can either wait for it to charge and temporarily stun itself, or, if you're feeling up for a risk, jump on it as it's charging. Either way, jump onto its back and grab the exposed fur.

As soon as you are on, start stabbing the marker on its back. The Colossus will buck, run, kick, shake and do everything in its power to keep you off balance. It takes a total of at least nine strong stabs to eliminate this Colossus.

The creature literally keels over, spurting black ooze in every direction. Running does no good—the tendrils catch up with you and bring on the darkness.

COLOSSUS XV

The Path to the Colossus

The Path Revealed

Map Location: G1

Thy next foe is... A giant has fallen into the valley... It acts as a sentry to a destroyed city...

1. Use the sword to discover the path.

2. Ride Agro northeast across the curvy bridge between the two stone pillars.

3. Adjust your path due north and follow the massive arched bridge, keeping it to your left.

4. When you reach this small stone marker, turn right and start heading northeast again, toward the mountains on the right.

5. Ride northeast toward the structures in the distance.

6. Arrive at the destroyed city carved into the mountainside.

7. Enter the city through the small opening located on the hill above the arched tunnels.

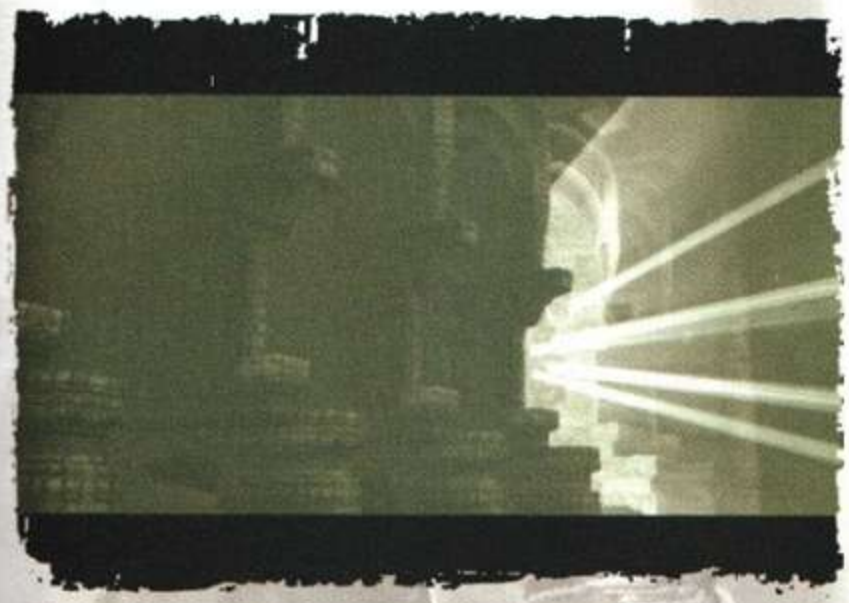
8. Inside the city proper, jump up and grab the right ledge to get around the obstruction.

9. Follow the path and take either direction, then climb the stairs and climb up the ledges up into the temple.

10. Run to the opposite end of the arena to call on the Colossus.

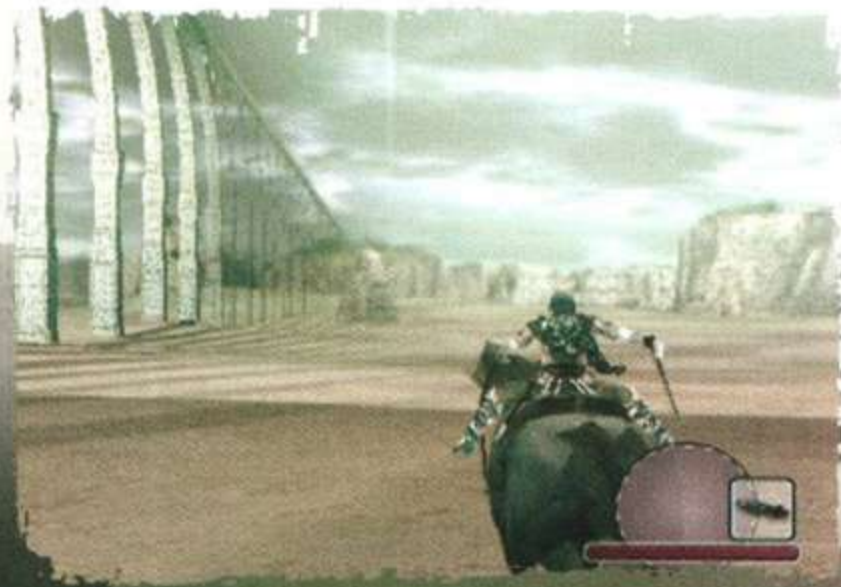
To Slay a Behemoth

Your goal is so close. Just two more Colossi stand in the way of reuniting with your beloved. The shadowy figures crouched around you seem to silently spur you on, as if they need you to finish your mission for a purpose not known to you. Toward the back of the shrine the fourteenth idol implodes and Dormin delivers his next cryptic riddle.



Raise your Ancient Sword high in the air to determine the path to the next Colossus, which leads to the northeast. The quest begins by riding over the long, curvy bridge, which is marked by two stone pillars.

Even though the sword may be pointing you in the direction of the second bridge to the northeast, you should stay on this side of the landmass and, instead, follow the massive arched bridge on your left.



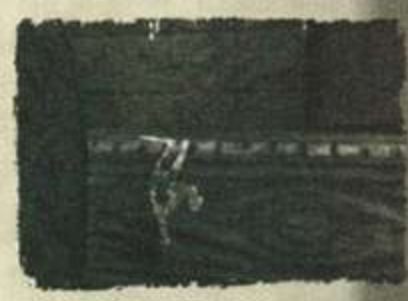
Locate the Landmark

Use this small stone outcropping as a marker. When you reach it, turn Agro to the right and ride toward the large stone structures off in the distance—your final destination.

The Destroyed City

When you reach the destroyed city, you must find the entrance, which is located at the top of a sloping hill, above the two arched tunnels.

Inside, climb up the ledge to the right of the fallen stone column. On the other side, that path splits off—take either one, then advance up the long staircase, climbing over the ledges as you near the top. The Colossus you seek is at the opposite end of the arena.



COLOSSUS XV

When you reach the platform at the other end, the enormous Colossus climbs up and out of the valley below. This beast carries a gigantic stone sword and can use its massive weight to crush and stomp its foes.

WEAK-POINTS

Head, arm, right palm

REST-SPOTS

Shoulder blades,

PREFERRED PATH

1. Seek out the lowest ledge on either side of the arena and lure the Colossus over to it.

2. Wait for the Colossus to try to stomp you with its hoof, dive out of the way and then use the tilted tile the Colossus is standing on to get up to the ledge.

3. Lure it toward the second story platform on which you stand and dodge its arm swipe.

4. Jump onto the fallen pieces of rubble, then jump and grab the ledge to the left.

5. Hoist yourself up onto the platform above and take the stairs up to one of the bridges spanning the arena.

6. Lure the Colossus over to the bridge, staying near the foot of the bridge, and leap onto it when it gets close.

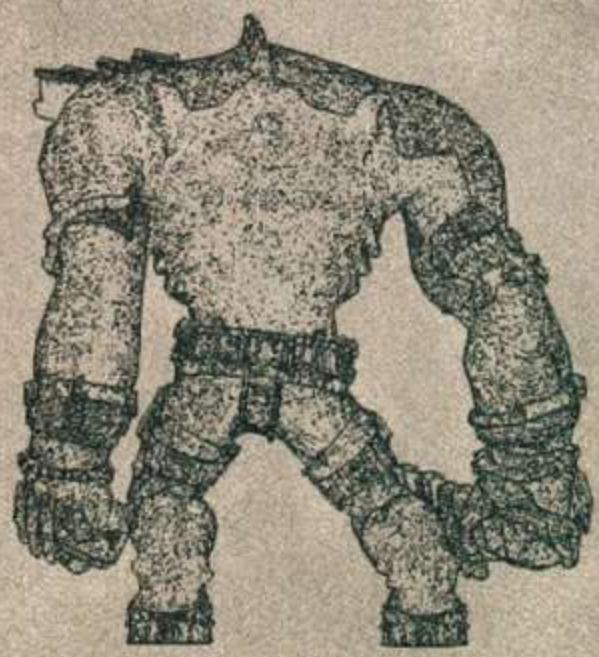
7. Attack and eliminate the marker on its head.

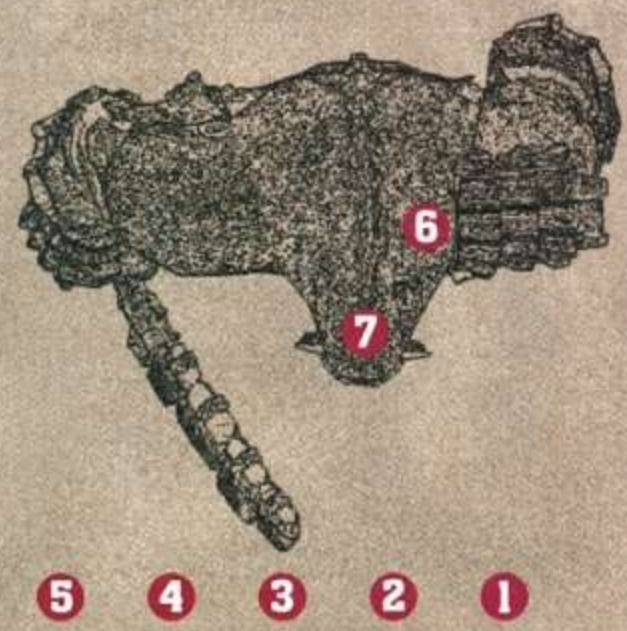
8. Climb down its right arm and attack the weak point near the Colossus' elbow, causing it to drop its weapon and expose its hand.

9. Drop to the ground and avoid its attacks until it slams the ground with its fist.

10. Grab the creature's palm while it is at ground level and stab the final marker until it is eliminated.

COLOSSUS XV





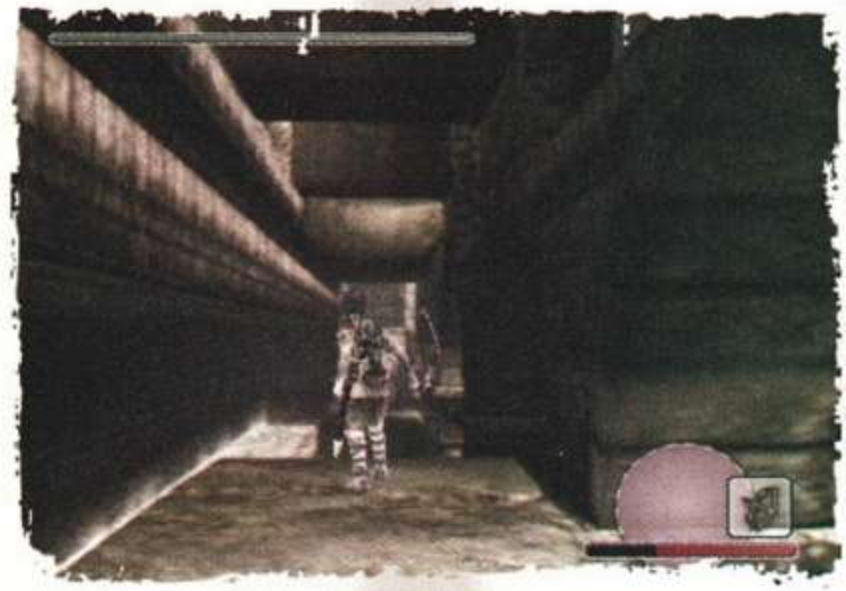
THE BATTLE BEGINS

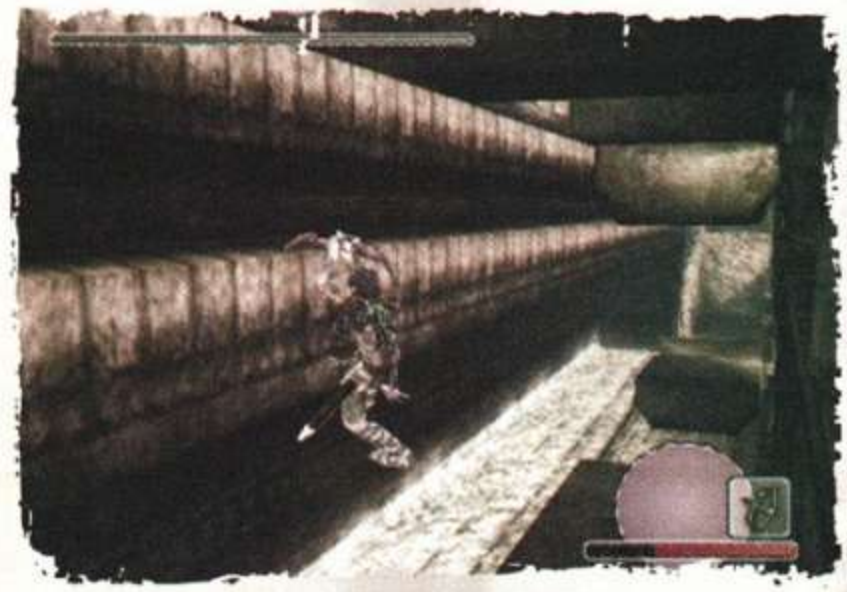
This Colossus may be slow, but it can deal some serious damage if you get caught underneath its massive hooves. It also is carrying a weapon in its right hand with which it draws back and strikes. Run away from it and seek out the lowest ledge on either side of the arena.

Stomping Mad

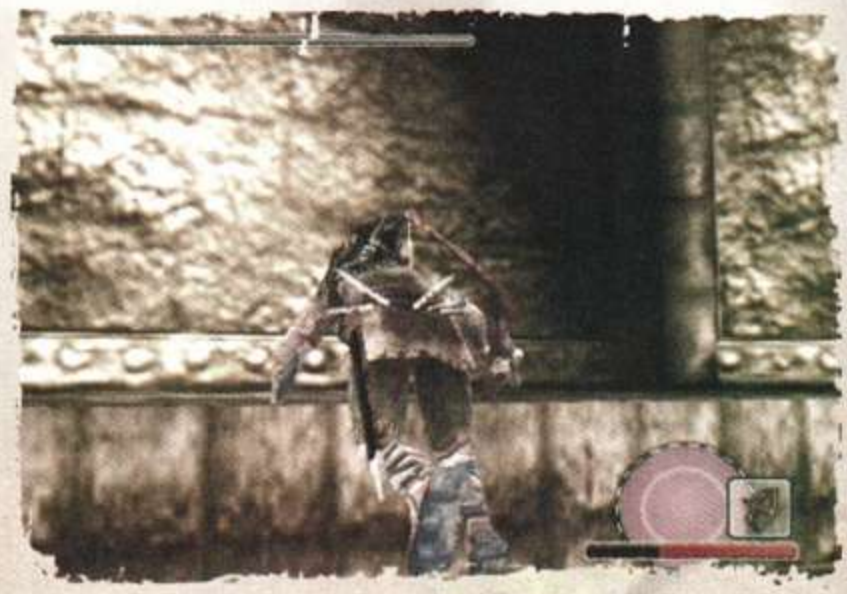
Hop onto the stone tiles lining the arena wall (the section underneath the lowest ledge) and, if necessary, lure the Colossus over to your location by shooting arrows at it or whistling. When it gets in front of you, it raises its leg and stomps in an attempt to crush you. Duck out of the way and double back as its weight has tilted the tile you are on, which gives you the added height you need to jump, grab and get up to the ledge.

The behemoth's attack knocks loose a stone from the roof. You can use this stone and the one underneath it to launch yourself up and grab the ledge on the left. From here, just hoist yourself up to the walkway above.





You must still get to higher ground if you want any chance of felling this beast. Position yourself in front of an archway and shoot a few arrows at the creature's head to get its attention and make it attack. As soon as it does, take evasive action to avoid getting hurt.



Take the stairs at either end of the walkway to get up to the next level, jump up to the ledge, then make your way to either bridge spanning the arena. Once there, lure the beast toward you.

STAY AWAY FROM THE CENTER

Don't venture too far onto the bridge. The Colossus will most likely crush it to pieces with one strong strike of its weapon, sending you down to the arena floor. If you keep to the foot of the bridge, you will be safe from this happening.

Once the bridge has been demolished, position yourself at the edge and wait for the Colossus to draw near (you may need to shoot or whistle at it to get it close). Stay crouched by holding L1 in case its repeated strikes knock you off balance and over the edge, and when its head temporarily disappears under the bridge, quickly leap onto it.

The first marker is easy to find at the top of the beast's head. It takes repeated attacks to eliminate it and the Colossus will make it difficult for this to happen by constantly whipping and shaking its head.

Rest Spot

Attacking the creature's head takes some effort, requiring you to periodically rest and regain your stamina. While there is no specific safe place to rest, you can use its shoulder blades. Just be ready to grab its fur at a moment's notice.

Once the marker has been eliminated, carefully climb down to the Colossus' right arm—there is a small marker located at its elbow. One strong stab is all it takes to cause the beast to drop its weapon, exposing a second marker on its palm in the process.

Drop down to the ground and put some pace between yourself and the creature. To get to the final marker and finish off this Colossus, lure it to attack with its right fist, dodge it, and quickly grab its palm while it is on the ground.

It takes only a few strong stabs to finish off the behemoth, sending it crashing to the ground. Yet another Colossus has been defeated, leaving just one standing between you and your beloved.

COLOSSUS XVI

The Path to the Colossus

The Path Revealed

Map Location: F8

Finally, the last Colossus... The ritual is nearly over... Thy wish is nearly granted... But someone now stands to get in thy way... Make haste, for time is short...

1. Use the sword to discover the path.

2. Ride Agro to the south and enter the canyon.

3. Take a right where the canyon intersects.

4. Continue to the south on the other side of the canyon toward the dark fortress in the distance.

5. Wind down through the small cliffs and arrive at the entrance to the dark fortress.

6. Stand on the platform and use the Ancient Sword to reflect the sunlight into the portal in the gates to open them.

7. Ride Agro up the stairs past the Save Altar.

8. Gallop and leap over the small gap and to the decrepit bridge at the top of the stairs.

9. Jump and grab up the series of ledges in the structure wall and repeat with the fallen debris to the right.

10. Climb the grassy wall and continue to follow the path to the left.

11. Enter the corridor and take the sets of stairs to reach the exit at the top.

12. Grab one of the columns, shimmy around to clear the overhang and the climb up to the platform overhead.

The Final Colossus

Fifteen shadowy figures are huddled around your ravaged, limp body. It is still unclear as to why they exist and what they want from you. If you can muster enough strength and courage to battle the final Colossus, you will have fulfilled your end of the bargain and Dormin will have no choice but to return the soul to your beloved.

The final Colossus lies in wait somewhere out across the vast land. As before, mount Agro, hold up the Ancient Sword and pinpoint the direction of your final target. It is found directly to the south.

Veer to the Left

The path you seek is due south, but the mountains block your way. Veer to the left to find a break in the mountain wall, which leads to a large canyon path.

Ride through the canyon, keeping to the right when the path branches. You eventually come out the other side into an open valley. As soon as you're back in sunlight, double check that you are still on the correct path by using your sword.

The Dark Fortress

Off in the distance, your final destination awaits. A dark fortress appears seemingly out of nowhere, beckoning you to enter. Find a way down and around the small cliffs and continue riding until you reach it.

SAVE BEFORE CONTINUING

Before you move on, save your game at the Save Altar, as you are about to tackle the last bit of navigation, as well as take on the final Colossus.

The Loss of a Friend

Ride Agro up the stairs to the next area. The only semi-passable route is across the bridge dead ahead, but if you try to cross it on foot, it crumbles beneath your weight and you are not fast enough to get across without falling to your death.

USE AGRO TO CROSS THE BRIDGE

The only way to get across the bridge is on horseback. Spur on Agro and he will leap across the gap and gallop over the bridge as it falls apart.

Follow the Light

The gates to the fortress are sealed shut, but you hold the key in your hands. Step on the platform and reflect the sunlight off the Ancient Sword back at the large keyhole to reveal the path inside.

Agro races across the stone bridge as it literally cracks and crumbles beneath his hooves. Even with his grace and speed, he is not fast enough to make it across and the bridge catches up with him.

Once up top, run to the right and hoist yourself over the stone blocks and ledges. There is a mossy outcrop on the wall above that must be climbed in order for you to continue.

To Kill a Colossus

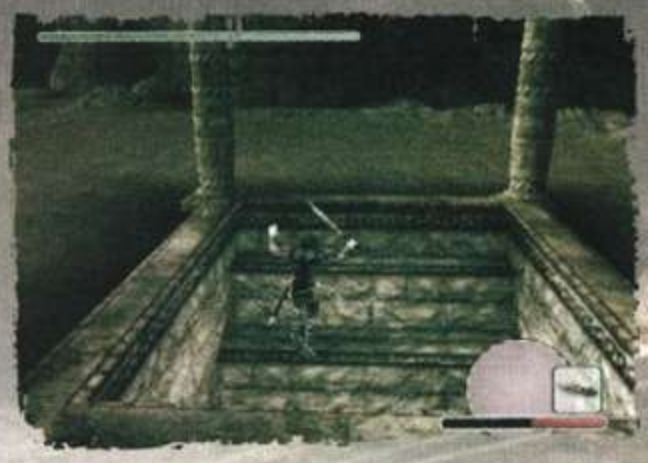
The final Colossus looms somewhere above. To get to it, start by climbing up the small ledges against the back wall.

A few more ledges and jumps lead to an interior, stair-filled hallway. When you get to the opposite end, high above the valley floor, jump and grab the left column and climb up in order to get on top of the ceiling overhang—just beyond, the last Colossus waits for you.

The Grueling Gauntlet

Before you can assault the Colossus you must reach it. The giant stone beast in the distance has the ability to shoot lethal lasers from its glowing armbands—one hit of which will send you flying backwards and can inflict hefty damage. Start your dangerous journey by using the columns for cover from the laser blasts and quickly dive roll from one to another before it can target you.

Once you reach the end of the cover, locate the hold in the ground and dive into it. This underground bunker safely leads you to another area, which gets you one step closer to the Colossus.



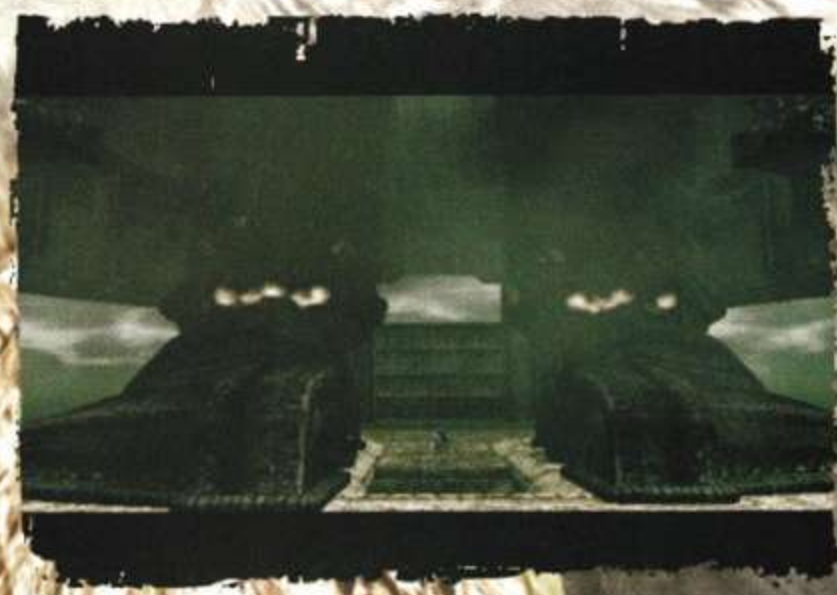
USE THE BLAST SHIELDS

The only safe way to keep from getting blasted by the Colossus is to stay behind the stone blast shields, which absorb the brunt of its attacks. Stay crouched and wait for a break in the shooting before dive rolling from one to the next.

Drop down into this next bunker at the end of the series of blast shields and follow it to the next area. Back outside, jump up and grab the ledge, shimmy around to the other side, then leap and grab the walkway beyond.

Enter the next bunker and follow it until it exits at yet another series of blast shields. This time they are not in a straight line, making diving from one to the next a bit trickier than before. Just carefully aim for each and keep rolling to avoid the beams and you should be just fine.

A final bunker at the end of the shields delivers you, quite literally, at the feet of the Colossus.



COLOSSUS XVI

This monolithic, moving temple towers several stories in the air and is built mainly of solid stone. In order to bring it down, you must scour every inch to exploit its weak points.

WEAK POINTS

Lower back, left bicep, back of right hand, left shoulder, top of head

REST SPOTS

Back of hands, shoulders

PREFERRED PATH

1. Get underneath the Colossus and grab the ridged wall to start climbing up.

2. Run to the right and shimmy or leap across to the next walkway, then grab and climb up the following walkway using the small ledge.

3. Continue along the walkway to the next section and leap over to it, locate the small set of ledges and use them to get up to the next level, then repeat with a second set above and to the right.

4. Continue to climb until you can't get any higher, then shimmy to the right. Another set of ledges allow you to advance to the next level.

5. Climb up to the next ledge and grab the small ridge running along the wall. Shimmy to the right, pull yourself up, then locate the hanging ledge in the center and jump up and grab it. Pull yourself up one more time to reach the torso.

6. Position yourself at the back and locate its weak point. Attack the weak point to cause the Colossus to move his hand toward its back.

7. Jump from the Colossus' back to its hand and then climb around its palm to the back of its hand.

8. Run up the forearm, then jump and grab the fur on its bicep and attack the weak spot.

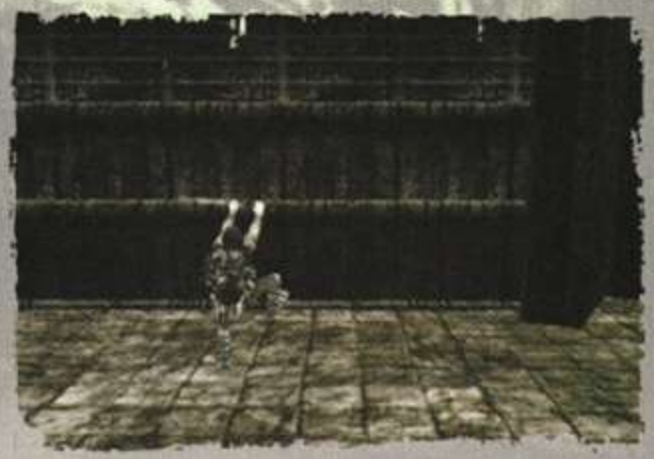
9. Jump to its palm when it moves its hand close and climb onto the opposite side. Stab the back of its hand and then stand up and shoot its left shoulder.

10. Jump onto its shoulder when it moves its hand near and scramble up and around its shoulders to the back of its head. climb onto its head, and then repeatedly plunge your sword into its skull to eliminate the beast.

COLOSSUS XVI

THE BATTLE BEGINS

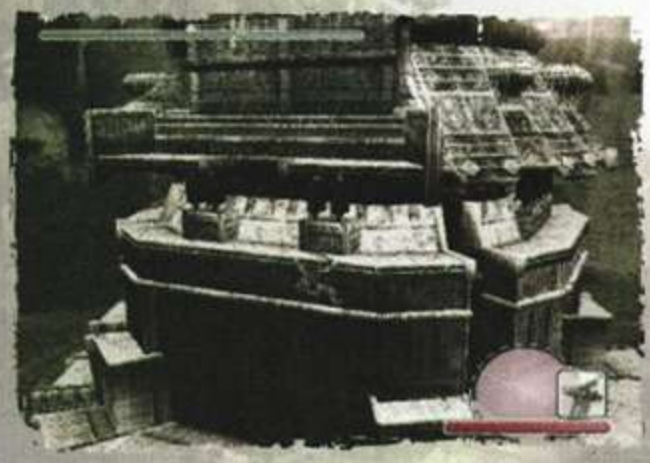
Start your assault on the Colossus by climbing onto the wall underneath the beast. Hoist yourself onto the walkway above, then head to the right and shimmy along the small ledge to get to the next highest walkway.



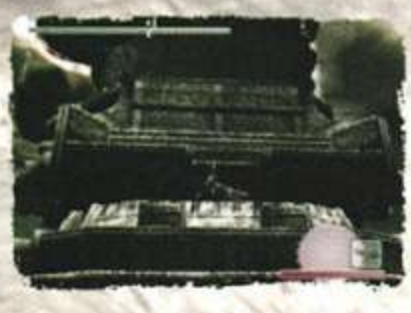
Jump and climb up to the next level, then keep heading to the right until you can grab and climb up the next set of ridges.

Run to the right, then jump and grab the next set of small ledges to continue the ascent. When you get to the point where you can't pull yourself up any further, shimmy to the right to continue.

Continue to climb upward and onward. You eventually reach this small ridge. Shimmy to the right or left to get a foothold, then double back to the center and pull yourself up.



Jump up and grab the next set of ledges above, then hoist yourself up to the creature's back. A marker is found along the beast's torso region, along the back.



Jump on its hand

Stab the small marker to make the Colossus reach over to its back with its hand, giving you the perfect opportunity to jump and grab it.

Climb around the behemoth's palm in order to get on to the back of its hand. As soon as it's level, quickly run up its armband and attack the second weak spot on its bicep.

Jump on its hand—Again!

Stabbing the marker causes the Colossus to grab its arm in pain, giving you another opportunity to jump off and grab it.

This time, stab the back of its hand, which causes the creature to draw you near, giving you the perfect opportunity to launch the next attack.

Shoot the Shoulder!

As soon as the Colossus raises his hand shoulder level, equip your bow and arrow and shoot it in the left shoulder. This rewards you with the desired effect—the beast grabs its shoulder in pain, giving you the perfect opportunity to jump and grab ahold.

The Final Assault

Once you have a grip on the Colossus, climb around its shoulder and run around to its back. You can get up on its head here, where the final marker can be found.

PATIENCE IS KEY

The behemoth is not going to go down without a fight and will do whatever it takes to try to knock you free, or at least wear down your stamina meter. As such, you have the smallest window of opportunity for strong stabs. Stay diligent and get in the strikes whenever possible.

Rest Spot

You must rest—there's no way you can take out the Colossus without taking the time to regain your stamina repeatedly. Whenever you get low, climb back down to the shoulder area and hang out until you can afford to make another go at it.

Continue the process of stabbing the Colossus's marker whenever possible, then resting on its shoulders for a few moments to regain your stamina, and it will be eliminated, clearing the way for your wish to come true.

Once the marker is eliminated, the sixteenth and final Colossus crashes to the ground. Your battered body, tired and lifeless, is pierced through a final time by the dark tendrils then all goes black. Is it finally over? Will you be reunited with your beloved?

EPILOGUE

For an eternity in order to seal away Our power... We, Dormin, have arisen anew... We have borrowed the body of this warrior...

The Truth Revealed

Darkness leads way to blinding light. The masked men have arrived at the shrine with a sense of urgency. When they reach the bottom floor, they bear witness to the destruction of the sixteenth and final Colossus idol—they are too late. Back at the remains of the final Colossus, your broken and battered body lies in an unconsciousness state.

As the man called Lord Emon approaches the lifeless body of the fair girl, the sound of metal hitting stone draws their attention. Your body has been returned to the shrine once more, and as you struggle to stand, it's evident that you are no longer human. Dark scars etch your face and body and mysterious horns have sprouted from the sides of your head.

Lord Emon reveals that you stole the Ancient Sword, trespassed upon this cursed land and used the forbidden spell to call on Dormin. It turns out you were a pawn and have been used for some purpose that is about to be revealed. For your insurgency, he orders his men to execute you on the spot.

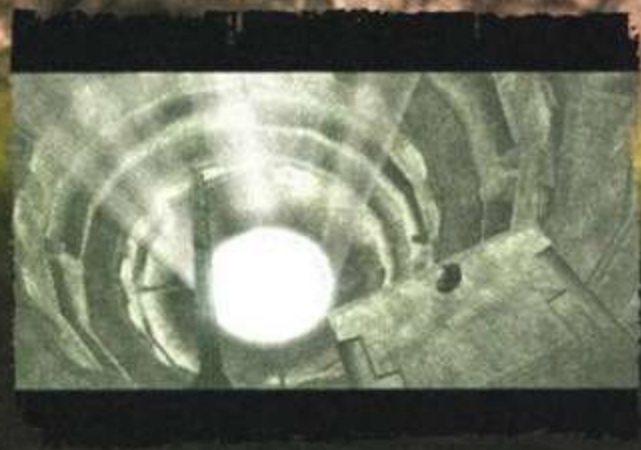
The Demon Awakens

Having been run through with a sword, you stagger to your feet, black ooze spurting from your wound like that of a Colossus. In a desperate last attempt, you gather the remaining strength and humanity left inside your body and extract the sword, but it's all for naught, the darkness envelops you. Before the men can react, your body absorbs all sixteen of the shadowy figures and transforms into a huge, monstrous demon—Dormin has arisen anew.

Take Control of Dormin

This next portion of the ending temporarily puts you in control of Dormin. While you won't be able to kill or stop any of the men from escaping, you can use the demon's considerable power to smash, thrash and pound them for a bit. Press ● to smash your fists down to the ground. Press ✕ to blow chilling demon breath at your prey. Press L1 to crouch.

The men will find a way to escape Dormin's clutches, grabbing the Ancient Sword in the process. When they reach the exit at the top of the shrine, Lord Emon tosses the sword into the pool of water at the bottom. Its effect is immediate—the pool bursts into light and creates a powerful vortex.



A Last Ditch Effort

The vortex creates a powerful vacuum effect and is too strong for Dormin to resist. As it slowly tugs you toward its center, the darkness is stripped away from your body, slowly returning you back to your human form.

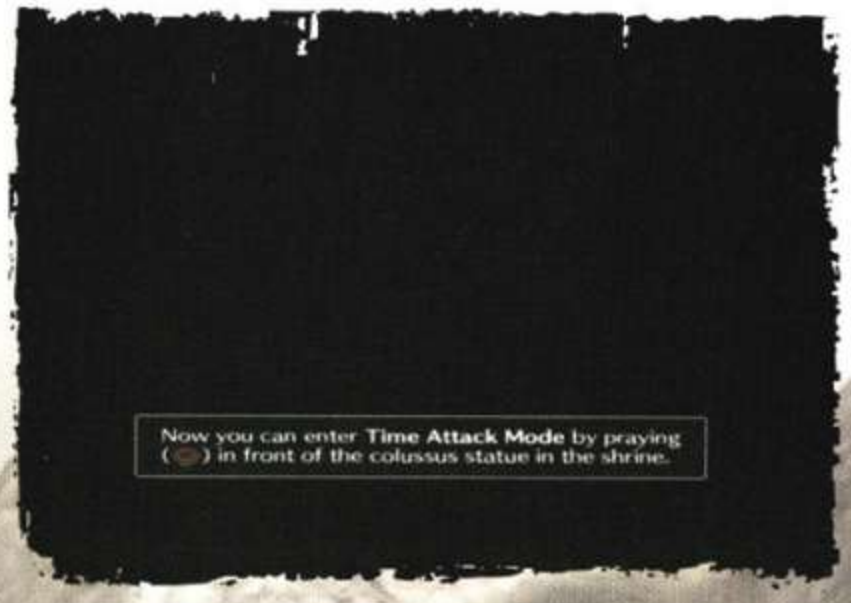
The Final Moments

You are so desperate to get to your loved one, yet the pull of the vortex is impossible to withstand. At this point, you can try to resist it and grab onto any ledges, platforms, or objects to hang on, but eventually you will lose your grip. You can steer yourself in a limited capacity with the left analog stick and holding L1 allows you to temporarily grab a handhold.

Eventually you are swallowed up into the vortex and sacrificed. Dormin is defeated, but at the cost of your own life. Had you lived, you would have witnessed the events that took place afterward. Nothing is spoiled here, so sit back, watch the credits roll, and prepare to have more questions than answers...

The End, or Just the Beginning?

Even though you have finished the game and defeated all the Colossi, there is still so much to do and uncover in this masterpiece of a video game. Once the credits have finished, you are asked if you want to save your game. Save your progress and two new game modes appear: Time Attack Mode and Hard Mode. Hard Mode can be selected from the Title Screen, but to activate Time Attack Mode, you need to start a new game on Normal Mode, then press ● to pray in front of any of the Colossus idols inside the shrine. For more information and details on these modes, turn to *Beyond the Shadow* in the next section of this guide.



BEYOND THE SHADOW

hARD MODE

Now that you've beaten Shadow of the Colossus, there's still plenty more to see and do. After the final credits roll, you unlock two new Game Modes: Hard Mode and Time Attack.

Unlike playing the game through a second time in Normal Mode, your Stamina Meter and Health Meter are reset back to their original starting capacity and don't carry over to the next game. However, if you manage to beat Hard Mode, you are able to play it again and keep your attributes. You can do this a total of 16 times, which grows your Stamina Meter to the size of a third of the screen! Beating Hard Mode also unlocks Hard Time Attack Mode, where you are able to obtain an additional eight items over and above the ones in Normal Time Attack Mode. For more information on Time Attack Mode, refer to the next section.

The Hard Mode option appears on the Title Screen once you beat the game. Selecting this option starts a new game from scratch, except it is even more difficult and challenging than Normal Mode. The main differences between Hard Mode and the normal game are that some of the markers on the Colossi have been moved, others added, and overall, the Colossi are stronger, can deal more damage, may act differently, and are much more difficult to eliminate.

TIME ATTACK

Once you've beaten Shadow of the Colossus, you gain access to a few new Game Modes. In addition to Hard Mode, you also unlock the challenging Time Attack Mode.

Time Attack Mode is basically a series of Colossus battles where not only do you have to battle the Colossi, but you are also up against the clock. If you can manage to bring down each of the sixteen Colossi within their allocated time limit, you will be rewarded with a set of special items that can then be used during the adventure mode.

Here's how Time Attack works: After beating the game, you are asked to save your progress. Once saved, you can load this save file from the Title Screen by choosing Load Game, which starts a new game from scratch (there will be a number "2" next to the save file, indicating that this is your second play through). Once the game starts, approach any one of the sixteen idols lining the shrine's walls and press ◉ to pray in front of it. Doing so activates that Colossus's Time Attack and you are automatically transported to the start of the battle. For every two Colossi you beat in Time Attack Mode, Dormin gives you a special item, which appears in the vortex pool at the back of the shrine. For more information on these items, refer to Items section that follows.

When you beat the game on Hard Mode, you gain access to an even tougher Hard Time Attack Mode. Depending on the Colossus, the time limit may be longer or shorter, there may be more markers or markers in different places, and it may take many more stabs to kill it. Good luck!

Strategies

The same general strategies from the standard game apply to Time Attack Mode—climb and seek out the markers, watch your stamina and bring down these giants. The only difference is that you must do it quickly! There's little room for error. Adding to the challenge, your Stamina Meter is the exact same size it was during that Colossus' original battle. For example, when you go up against Colossus I (the first Colossus encountered in the game) your meter will be tiny, just as it was when you first fought it. Lastly, any items you earn during Time Attack Mode can only be used during the standard game.

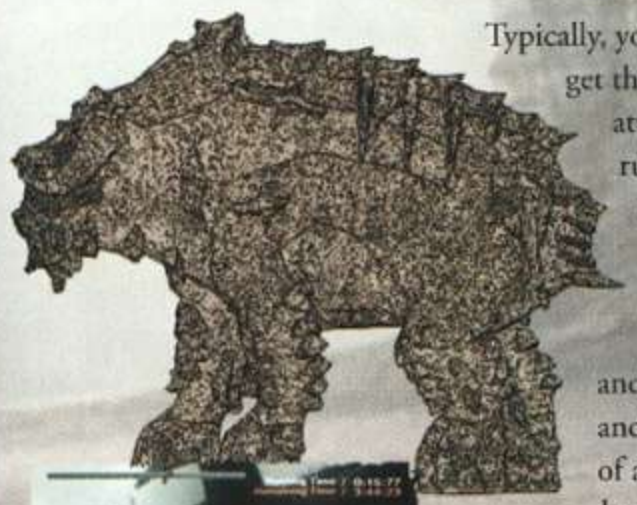
The following are a list of the Time Attack time limit requirements for both Normal and Hard Time Attack Modes, as well as Colossus-specific strategies and tips to help you beat the clock and achieve record times.

COLOSSUS I

To shave off some precious seconds, immediately start to whistle as soon as the battle begins. This stops the Colossus in his tracks and allows you to catch up with it in record time. In Hard Time Attack Mode a second marker appears on the Colossus I's right bicep.

TIME REQUIREMENTS	
Normal Mode	2:30:00
Hard Mode	2:50:00

COLOSSUS II



Typically, you need to get this Colossus's attention by running in front of it, which wastes time. Instead, break out the bow and arrow early and shoot a volley of arrows at its head. When it rears up, shoot the left hoof as the path to the marker on this side is shorter than the one on the right.

TIME REQUIREMENTS	
Normal Mode	4:00:00
Hard Mode	4:30:00

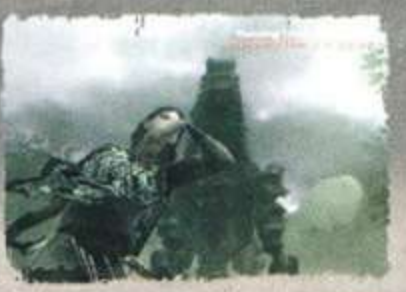
COLOSSUS III

The biggest time cruncher here is luring Colossus III to attack the stone platform in order to shatter its armor and get to the marker. To force it to do this quickly, rush toward Colossus III as soon as the battle begins and position yourself at the edge of the platform. This causes the Colossus to take two steps back. As soon as it does so, roll into the center of the platform and wait for it to attack. Colossus III takes two more steps back and moves into just the right spot to shatter its armor, allowing you to quickly get access up its arm.

TIME REQUIREMENTS	
Normal Mode	6:00:00
Hard Mode	5:00:00

COLOSSUS IV

Just getting Colossus IV into position eats up half the clock. To do this as quickly as possible, immediately get its attention by whistling when the battle begins. As soon as it gives chase, run to one of the two back mounds and wait on top near the edge. As soon as Colossus IV draws near enough to attack you, drop into the underground tunnel and run out the other side. Once you're on top of this Colossus, a series of quick stabs allows you to defeat it swiftly.



TIME REQUIREMENTS	
Normal Mode	5:30:00
Hard Mode	5:00:00

COLOSSUS V

You will eat up almost a minute of your time just swimming to the platform in order to get Colossus V to attack. Keep R1 held down to swim faster and come up for air before you run out of breath and then dive back down, for a second run.

The order in which you attack Colossus V's three markers is the only thing that will really save you time. Attack the wings first, then make the trek down the tail for the final marker at the end. If you fall off during this battle, you may just want to retry, as it's tough to recover and get back on Colossus V before the timer runs out.

TIME REQUIREMENTS	
Normal Mode	5:30:00
Hard Mode	5:30:00

COLOSSUS VII

You should have plenty of time to beat Colossus VII. The key is to avoid becoming overzealous, methodically making your way along Colossus VII's back to its four markers. A good way of saving some seconds is to execute the Downward Stab maneuver at each spine marker to take out each quickly. While this is a risky proposition, as if you miss you will most likely slip off into the water, but it saves you loads of time if pulled off correctly. To execute this secret move, press △ to jump, then quickly hold R1 + ○ to lunge and stab at the same time.

TIME REQUIREMENTS	
Normal Mode	12:00:00
Hard Mode	8:00:00

COLOSSUS VI

This is one of the tougher Colossi to beat in Time Attack Mode, as the time limit is really short (especially in Normal Mode). As soon as the battle begins, run, climb and leap your way to the hiding area at the back of the arena. Make sure you are out of its view but whistle so it knows you are there. If you stay in sight, it may try and attack you versus lowering its head to get a look—that's precious seconds you can't afford. The order in which you should attack the markers is head first, and then drop and grab your way down to the one on the back. In Hard Mode, an additional marker can be found on its left hand.

TIME REQUIREMENTS	
Normal Mode	3:30:00
Hard Mode	6:30:00

COLOSSUS VIII

The trick to quickly getting Colossus VIII on its back is to continually whistle the moment the battle begins, which lures it up onto the coliseum wall. Forget about taking the stairs to get down to the ground floor. Instead, run to the right, locate the gaping hole in the wall and drop down. You take some damage, but quickly reach ground where you can get a solid bead on the beast's legs. An alternate strategy that works well is to lure Colossus VIII so that its underbelly is exposed in one of the barred windows, then shoot three arrows into its soft flesh, which also causes it to tumble to the ground.

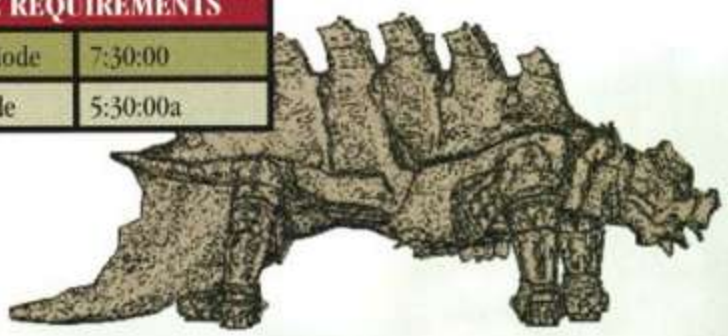
TIME REQUIREMENTS	
Normal Mode	8:00:00
Hard Mode	7:30:00

COLOSSUS IX

The big time waster in this battle is getting Colossus IX to chase you to one of the geysers. In order for this lumbering creature to move at all, you must create some distance between you and it first, which can eat up many seconds.

Instead of running to lure Colossus IX, stay on Agro and gallop away, causing the beast to give chase that much quicker.

TIME REQUIREMENTS	
Normal Mode	7:30:00
Hard Mode	5:30:00a



COLOSSUS X

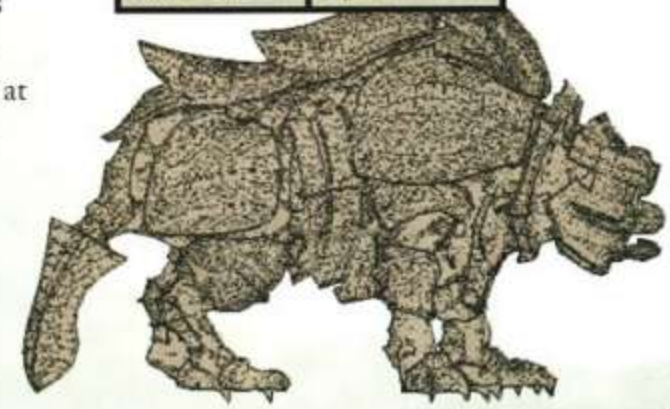
The key to this battle is to use L1 to automatically snap your bow's targeting cursor at Colossus X when it's drawn. Doing so locks on to its eye automatically and saves you the time and frustration of trying to do it manually while riding backwards on horseback.

TIME REQUIREMENTS	
Normal Mode	6:00:00
Hard Mode	5:00:00

COLOSSUS XI

Colossus XI is one of the tougher challenges in the Time Attack Mode, as you must first break its armor before you can even attempt to make a dent in its marker. To save time, quickly and carefully dart from the crevice between one fire lamp to the next, avoiding Colossus XI's charge attacks. Climb up on either fire lamp at the end of the temple versus the two near where the battle commences, as you will have less space in which to back it up and off the ledge. When it falls, quickly jump on its back (if you're feeling really daring, try to execute a Downward Strike) then wait out the long ride back to the temple. Remember to use the fire lamps to stun it and get back on its back once you return to the area.

TIME REQUIREMENTS	
Normal Mode	5:30:00
Hard Mode	5:30:00



COLOSSUS XII

The greatest time saver here is to get on to Colossus XII's back as fast as possible. Don't waste any time trying to lure it on to a platform, just dive in the water and swim underneath its armpit to reach its backside before it can turn away. The rest of the battle pretty much remains as before—steer it toward a second story platform by striking its head teeth, jump off when close, then shoot it with arrows to cause it to mount the platform and expose the marker.

TIME REQUIREMENTS	
Normal Mode	9:30:00
Hard Mode	10:00:00

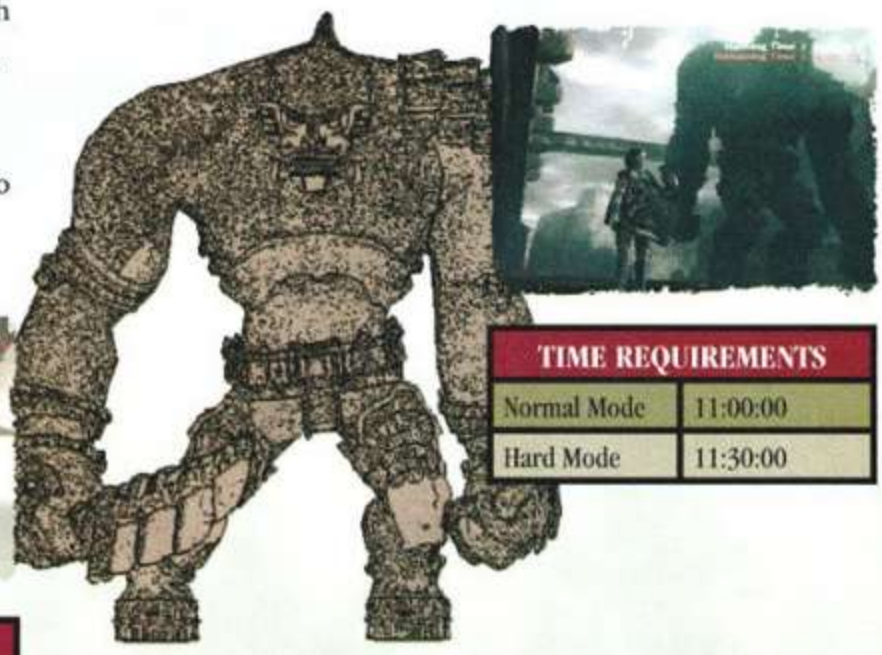
COLOSSUS XIII

There are many things to do to save time when battling Colossus XIII. To start, don't bother mounting Agro and chasing it down to shoot its gas sacks with your arrows. If you're fast enough, you should be able to quickly aim and shoot all three sets from where you're standing before it flies out of range. Once you're on Colossus XIII's back, stab the first two markers only twice each, but don't eliminate them completely. Instead, after stabbing the first two twice, head to the final one and eliminate it, which causes Colossus XIII to dive into the sand. Now, when you get back onto its back, you can quickly take out the remaining two before Colossus XIII dives down again. Rolling is also a way to quickly get down the length of its back, although it's a bit risky, as it's easy to fall.

TIME REQUIREMENTS	
Normal Mode	12:00:00
Hard Mode	13:00:00

COLOSSUS XV

Most of the time consumed in this battle is just getting Colossus XV to cooperate. Quickly whistle and run toward the tiles on either side of the arena in order to lure it into striking position. Once you reach the bridge up top, continue with the whistling (or shooting arrows) to get it to move in close enough for you to leap on to its head. From here, the order of attack should be back of head, chest, arm and then palm. Remember, dropping and grabbing is much faster than trying to climb down a beast.

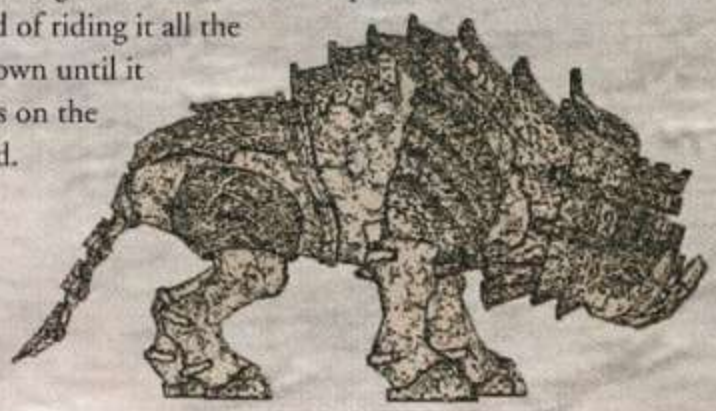


TIME REQUIREMENTS	
Normal Mode	11:00:00
Hard Mode	11:30:00

COLOSSUS XIV

Strategies for Colossus XIV are pretty light, as there aren't many opportunities to save time due to the path you must take. Take a few trial runs and memorize the sequence so you know exactly which way to go, which column to jump to, and what to do next. Also, even though the camera cuts to a cinematic when a column has been knocked over, you still have a split-second to control your character before it does so. As soon as a column begins to tumble over, leap off to the next instead of riding it all the way down until it crashes on the ground.

TIME REQUIREMENTS	
Normal Mode	9:00:00
Hard Mode	9:00:00



COLOSSUS XVI

Colossus XVI is a tough one to beat, as getting to it is even more time consuming than the battle itself. Even though time is short, exercise patience and be deliberate. More times than not, one rushed move results in getting slammed backwards with a missile or falling many stories and having to climb back up. A nifty trick to get it to stop shaking when holding on to its head is to quickly let go after a solid stab (only when it's safe to do so—don't let go if you're hanging off the front of its head) and carefully move a few inches down its head. Colossus XVI immediately stops his tremors and gives you another opportunity to strike before it begins shaking anew.

TIME REQUIREMENTS	
Normal Mode	9:30:00
Hard Mode	13:00:00

SPECIAL ITEMS

Just when you think you've seen and done everything there is to do in the world of Shadow of the Colossus, you find that you haven't even scratched the surface. As you play through the Time Attack Mode and the following Hard Time Attack Mode, you are given a total of sixteen items. You are awarded an item for every two Colossi you defeat in Time Attack Mode. After beating the second of two Colossi, the item appears in the vortex pool at the back of the shrine. Each item has its own distinct function and ability. To use an item once you've acquired it, press ► to pause the game and pull up the Map, then select Items from the menu, highlight the item you want to equip, and press ✕ to switch it on. Press ✕ a second time to turn it off. You can have multiple items equipped simultaneously. The following list details each item and the order in which they are obtained.

Normal Time Attack Mode

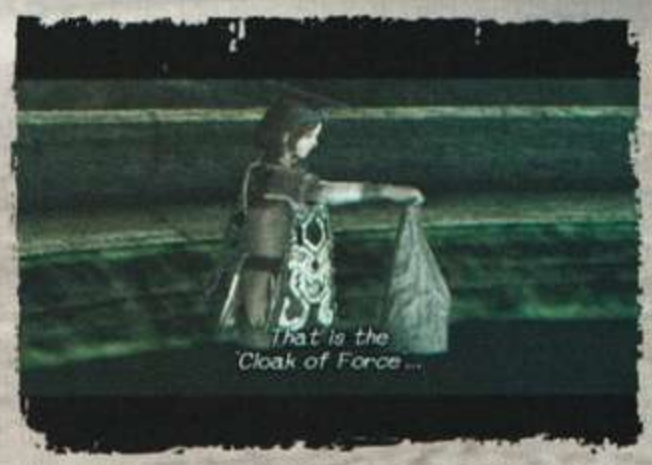
You acquire one item for every two Colossi beaten in Time Attack Mode. The order in which they are tackled is up to you. Once obtained, you can use the items during the standard game but you do not have access to them in Time Attack Mode.

1. WHISTLING ARROW

This arrow makes a whistling noise as it soars through the air, distracting Colossi with its piercing sound.

3. MASK OF STRENGTH

The wearer of this mask is granted the power and strength of the Titans. By wearing it, you are able to inflict deeper wounds on a Colossus.



2. CLOAK OF FORCE

The wearer of this cloak gains strength and can inflict more damage against the Colossi. The cloak's strength is enhanced further when combined with the Mask of Power or Mask of Strength.

4. LIZARD DETECTION STONE

This stone displays the lizards' locations on the Map, allowing you to hunt them down much easier.

5. FRUIT TREE MAP

This item displays all of the fruit trees on your Map, making it easier to locate and get the life-giving fruit.

6. MASK OF POWER

Like the Mask of Strength, the Mask of Power grants its wearer the enhanced power to inflict deeper wounds on a Colossus.

7. CLOAK OF DECEPTION

This cloak makes you virtually invisible so a Colossus cannot sense your presence. It's exceptionally handy when you've fallen off a Colossus and want to get back on quickly.

8. FLASH ARROW

This arrow has an explosive tip that detonates on contact. Its payload is powerful enough to injure a Colossus.

Hard Time Attack Mode

As with Normal Time Attack Mode, you acquire one item for every two Colossi beaten in Hard Time Attack Mode. As before, the order in which Colossi you tackle is up to you.

1. HARPOON OF THUNDER

A gift from the Gods. This elemental projectile weapon has incredibly long range and is powerful enough to injure and weaken a Colossus.

2. SWORD OF THE SUN

This item allows you to always reflect the sunlight off your Ancient Sword, even when in shade or darkness.

3. FRUIT TREE MAP

This item displays all the fruit trees on your Map, making it easier to locate and get the life-giving fruit.

4. SHAMAN'S CLOAK

The wearer of this protective cloak sustains less damage when attacked.

5. LIZARD DETECTION STONE

This stone displays the lizards' locations on your Map, allowing you to hunt them down much easier.

6. SHAMAN'S MASK

Similar to the Shaman's Cloak, when equipped, the wearer of this mask has greater protection and takes less damage when attacked.

7. CLOTH OF DESPERATION

This cloth can be used as a parachute to slow your descent should you fall from a Colossus.

8. QUEEN'S SWORD

The ultimate weapon from ICO. This super powerful sword can inflict a mortal blow with one strike.

EXTRAS

There's much more to Shadow of the Colossus than meets the eye. The developers at Sony Computer Entertainment Japan have lovingly crafted something more than just your typical video game. One part emotional drama, one part interactive story, one part art, this masterpiece of a game has so many hidden secrets and background steeped in religion and ancient history that we may never uncover them all. One thing's for sure, the developers aren't telling. The list below contains a variety of interesting items, secrets and little known facts that are woven into the game's fabric. Try them out and then go off and explore on your own to see what else is hidden in this mysterious land.

Agro

There are many different secrets and goodies in the game pertaining to Agro, the horse. The first are a host of cool and hidden moves that you can pull off when riding him. Some are detailed in the Essentials section of this book, but the whole list is displayed here:

ABRUPT STOP

If you need to come to a quick stop from a full gallop, simultaneously press down on the left analog stick and ✕. Agro literally skids to a halt when you execute this move.

INSTANT GALLOP

Conversely, if you need Agro to burst into a run from a dead stop, execute the same exact move (down on the left analog stick and ✕). Agro rears up on his hind legs and whinny, then takes off running at full speed.

QUICK 180° TURN

This hidden move comes in especially handy when trying to outrun and get away from certain Colossi. To execute a quick turn, simultaneously press down on the left analog stick and ✕ two times quickly in a row. Agro stops quickly and changes direction back the way from which he came.

STANDING ON HORSEBACK

You can stand on Agro's back while he's galloping by pressing and holding R1 and ✕.

RIDING SIDESADDLE

You can shift your weight and ride sidesaddle by pressing and holding R1 and ⊗ and pressing the left analog stick in the direction you want to lean.

PET AGRO

Un-equip a weapon and switch to the Hand Icon, then press ◉ when sitting on horseback.

BROWN AGRO

To play with a brown-colored Agro, defeat all sixteen Colossi and acquire all items in Normal Time Attack Mode, then press and hold ◉ at the Title Screen. When you start a new game or load a saved game, Agro will be brown.

WHITE AGRO

To play with a white-colored Agro, defeat all sixteen Colossi and acquire all items in Hard Time Attack Mode, then press and hold ◉ at the Title Screen. When you start a new game or load a saved game, Agro will be white.

ICO SYMBOL

Use a memory card with an ICO save game on it and the diamond-shaped mark on his head becomes the "I" from the ICO logo.

Hitching a Ride

You can grab various animals in and around the landscape and take them for a ride. To do this, sneak up behind an animal and press L1. Try this on the doves around the pyre at the shrine, the hawks around the Save Altars, and even the large fish and eels in the lake.

Save Altar Attract Modes

Depending on the location where you saved your last game file, and if you've beaten the game or not, the attract mode shows Agro or a hawk galloping or flying around the environment. If your last save is at the shrine, then the attract mode focuses around the area near the shrine. If your last save is at a Save Altar across the land, the attract mode runs its course around that altar.

Reminiscence Mode

After defeating a Colossus, you can return to its remains and replay the battle in a special mode called Reminiscence Mode. Locate each Colossus's remains by following the beams of light shooting into the sky. To enter Reminiscence Mode, approach its remains and press ● to kneel down and prey in front of it. The battle takes place again with you at the controls, except that it will be displayed in a grainy texture as if you're watching an old film clip.

The Secret Garden

This last secret is probably the game's coolest. At the ends of the world is a secret garden. This lush paradise can only be reached after you've beaten the game at least four times and have built up your Stamina Meter substantially. To get to the garden, locate the patch of ivy on the north east side of the shrine and start climbing. To save on stamina, press and hold ▲, then release in order to propel yourself upward. Follow the trail all the way up and around the ledge to the right. At the opposite end of the ledge, leap across to the next set of ivy and keep going. There is another ledge above you must climb around. On the other side of this ledge, climb to the right and shimmy across yet another ledge—this one leads behind a column. Carefully leap to the ivy-covered column, then continue the ascent. The path of ivy leads up to a walkway. Quickly climb up the last bit and pull yourself up. Follow the stairs and walkway to the left to the garden. Spend some time in this lush paradise, just don't eat the fruit from the trees—it's forbidden and causes damage.

SEARCH THE SHADOWS FOR HOPE

Tales speak of an ancient land where creatures the size of mountains roam the majestic landscape. Bound to the land, these creatures hold a key to a mystical power of revival—a power you must obtain to waken a loved one.

Everything you need to free your loved one, and uncover the secret of the Colossi is found inside this guide.

Three-Tiered Walkthrough

Do you simply want help in finding each Colossus? **The Path to the Colossus** starts with a numbered listing of the steps necessary to reach each beast, then continues with detailed instructions if they become necessary.

The **Preferred Path** hits the key points to defeating each Colossus without holding your hand through the entire confrontation.

Should any Colossus prove to be a greater challenge, **Battle Begins** provides the step-by-step instructions on felling each beast.

Exclusive Fold Out

One side includes a **World Map**, pinpointing the locations of every Colossi. Incredible **Concept Art** sketches and color images are showcased as well.

Signature Series Bonus Features Include

Time Trial and **Hard Mode** coverage

A list of **Items** unlocked through Time Trials

Fun **Extras** that you can uncover during the adventure
